Photography has been the business and the passion of LIFE since the original weekly magazine's inception in 1936, and it continues to be the business and passion of LIFE Books and LIFE.com in the new millennium. But photography has surely changed during these many decades. The rigs and gear of old have given way-first slowly, then all at once-to sleek miracle machines that process pixels and have made the darkroom obsolete. The casual photog puts eye to lens, sets everything on auto and captures a photograph that is . . . perfectly fine. One of LIFE's master shooters-in fact, the final in the long line of distinguished LIFE staff photographers-was Joe McNally, and he has always believed that with a little preparation and care, with a dash of enthusiasm and daring added to the equation, anyone can make a better photo-anyone can turn a "keeper" into a treasure. This was true in days of yore, and it's true in the digital age. Your marvelous new camera, fresh from its box, can indeed perform splendid feats. Joe explains in this book how to take best advantage of what it was designed to do, and also when it is wise to outthink your camera or push your camera-to go for the gold, to create that indelible family memory that you will have blown up as large as the technology will allow, and that will hang on the wall forevermore. As the storied LIFE photographer and photo

editor John Loengard points out in his eloquent foreword to this volume, there are cameras and there are cameras, and they've always been able to do tricks. And then there is photography. Other guides may give you the one, two, three of producing a reasonably well exposed shot, but Joe McNally and the editors of LIFE can give you that, and then can show you how to make a picture. In a detailed, friendly, conversational, anecdotal, sometimes rollicking way, that's what they do in these pages. Prepare to click.

Focus is an important artistic tool, directing your viewers into and around your image, but a technical challenge too. In this book, the first serious treatment of the topic in the digital age, John Neel shows how a mastery of your lens will greatly enhance the quality and 'wow' factor of your photographs. Never losing sight of what real-life photographers need to know, Focus in Photography will let you master bokeh and other focus techniques, giving you a complete understanding of optics-and what actually happens to light within the camera in your hand. Richly illustrated with John's own amazing images, and drawing on his well-known authority in the field, it will be a valuable asset to students of photography, enthusiasts looking to refine their art, product photographers and commercial shooters alike.

This book provides an understanding of the principles of artistic design as they relate to the web, followed by the application of those design principles using Adobe® Dreamweaver and resulting in the ability to create effective websites. Tailored to users of either CS3, CS4, or the latest version of Dreamweaver, CS5, each chapter is comprised of three sections: new concepts; "reinforcing your knowledge" through projects and exercises; and a "build your own website" section designed to offer the reader the opportunity to build their own website using the concepts from each chapter. By the end of the book, the reader will have their very own website! The book starts with an introduction to the principles of design unique to the web, and then progresses to the incorporation of those principles into Adobe Dreamweaver for aesthetically pleasing web design. In fact, several chapters of this four-color, heavily illustrated text are devoted to web design from an artist's perspective. The author discusses understanding the psychological influence of colors, web typography and the voice of type, the principles of design as they relate to the web,

and how to maximize the potential of the graphic programs the readers are already familiar with to create effective graphics, creative navigation, and more. This text brings the reader through the design stage from initial concept to graphic preparation, followed by the importing of graphics or whole pages into Dreamweaver for building the site and uploading it to the Internet.
