Indian Medicinal Plants,
based on a treatise
prepared by S.

Raghunatha Iyer, a scholar of both Sanskrit and Ayurveda, aims to make an authoritative contribution to the field. The original work which drew upon classical texts and current research, as well as the oral medical knowledge of tribal groups has been updated by scholars associated with the Arya Vaidya Sala in Kottakal, India. This unique compendium offers profiles of 500 key species with detailed taxonomic information. One of the leading features of this

compilation is the special technique used in the illustrations, both colour and line, which aims to achieve authenticity of texture, colour and form. The book also lists the distribution and popular nomenclature in English, Sanskrit, Hindi, Malayalam and Tamil. The main texts present properties and uses in a format which cites ancient verse texts and ethnobotanical sources. This rare work, in five volumes, should be of special interest to practitioners of alternative medicine,

students of Ayurveda, the research and industry associated with medical botany, pharmacologists, sociologists and medical herbalists. *Ayurvedic Herbs* CRC Press *Ayurvedic Herbology East & West* is a comprehensive and practical guide to Ayurvedic herbal medicine that focuses on traditional Ayurvedic herbs and formulas that are readily available in the west. Proper identification of medicinal plants is still a great problem at this time. It has also drawn the attention from common men in general and scholars in the medical streams. In the light of the above, the

curiosity about the sources of the medicines, medicinal plants in most of the cases, has drawn considerable interest among all quarters of the medical science. In addition, in the absence of proper knowledge related to the identification of medicinal plants, many plants remained either unidentified or wrongly identified. In this book, an attempt is made to fill the above identified gaps. It is my firm belief that this book will be of immense use to Ayurveda experts, teachers, students of

post-graduates and under-graduates Ayurvedic courses, researchers, students of botany, scientists, pharmacologists, pharmaceutical organizations, pharmacists, biochemists, medical men and even common men.

This is an endeavour of the author to present a vast quantity of fact-based reliable analytical data on the Status (density and frequency

etc) of medicinal plants of India in his book. His inferences have the basis of field-based study on Status of plants the findings of which nullifies much bloated assertions of the experts on pharmacopoeia and of the pharmacologists that India was still a rich store house of medicinal plant resources; Their findings were never based on analytical (quantitative) data, besides that the systematic botanists have only prepared check lists of plants with morphological

descriptions but never mentioned about regeneration and on their status (density, frequency, abundance etc). So the floras do not speak of status-abundance or decay of various species. The exception was with the foresters who prepared status lists commercial tree species; with the formation of Forest Survey of India the country had adequate status data on commercial tree species of the entire country. There has been a big

lacunae on the status assessment of herbs, shrubs and climbers which form substantial number of medicinal plants. While making his assessment the author has applied his long years of field inventory experience and findings to arrive at a dependable figures. He has stressed that there has been continuous depletion of vegetation brought by various biotic and abiotic factors well displayed in a number of charts and maps. The authors has marked the status of species of plants

prepared by Chopra, Kirtikar and Bose, S Bhattacharya. He has also given an outline information of drug plants, export, import, threats and cultivation. The author desires that it was time to enforce strict conservation measures of flora besides inventory made on herbs, shrubs, climbers on medicinal plants. On the whole the book gives a broad outline of the present status of medicinal plants and some information associated with it. Contents Chapter 1:

Depletion of Land, Deforestation and Medicinal Plant Crisis; Chapter 2: Medicinal Plants in India-A Observation; Chapter 3: Ayurveda: An Indian System; Chapter 4: Potential Drug Plants of Undivided India-Listed by Kirtikar and Basu; Chapter 5: Some Potential Drug Plants of India-Comments on the List of Sibakali Bhattacharyya; Chapter 6: Some Potential Drug Plants of India: Comment on RN Chopra s List; Chapter 7: Technology on Trade and Commerce-
