 Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

### **Operator, Organizational, Direct Support, and General Support Maintenance Manual**

Offers guidelines for the operation, maintenance, and repair of heating boilers. This title is useful as a guide for the Heating Boiler Exam and to increase your understanding of boiler principles.

### **Fuel oil news**

This text documents strategies for energy cost reduction in commercial, institutional, industrial and government buildings.

Emphasis is placed on the integration of energy and environmental technologies which aim to reduce global warming, improve indoor air quality and meet CFC phaseout requirements. In addition, competitive power issues are addressed and their impact on new power generation technologies and demand-side management alternatives.

The wood-fired boiler at the Vermont State Hospital in Waterbury, Vermont was investigated in order to identify environmental and economic problems associated with increased use of wood as fuel. The investigators observed that the low amount of stack emissions contained particulates that were extremely effective light scatterers. An analysis of the entire system was performed in order to investigate the particulate growth and the conversion of gaseous material to particulates within the system. Initial findings indicate that a good deal of particulate formation takes place within and after the cyclone, thus rendering the cyclone somewhat ineffective in this system. Meteorological data were acquired in the vicinity of the experimental site. Background concentrations were measured using hi-vol samplers and a Tracer experiment was performed to indicate the direction of plume

travel. These data were incorporated into the Los Alamos Visibility Model to simulate the actual appearance of the plume with a variety of boiler sizes. This simulation gives one an indication of how large a boiler, sited in this location, can be before the opacity of the plume becomes aesthetically offensive. An economic assessment of the wood burning activities at Waterbury and a number of other sites is included in this report.
