Century Monthly Magazine Thunder Pear Publishing Knowledge is power. That would be the motto of Lander University, had it not been snatched up and used to death by others long before the school was founded. For while Lander offers a full range of courses to nearly all students, it also offers a small number of specialty classes to a very select few. Lander is home to the Hero Certification Program, a curriculum designed to develop student with superhuman capabilities, commonly known as Supers, into official Heroes. Five of this year's freshmen are extra special. They have a secret aside from their abilities, one that they must guard from even their classmates. Because for every one person in the world with abilities they can control, there are three who lack such skill. These lesser super beings, Powered as they are called, have always been treated as burdens and second class citizens. Though there has been ample research in the area, no one has ever succeeded in turning a Powered into a regular human, let alone a Super. That is, until now...

This book presents computer programming as a key method for solving mathematical problems. There are two versions of the book, one for MATLAB and one for Python. The book was inspired by the Springer book TCSE 6: A Primer on Scientific Programming with Python (by Langtangen), but the style is more accessible and concise, in keeping with the needs of engineering students. The book outlines the shortest possible path from no previous experience with programming to a set of skills that allows the students to write simple programs for solving common mathematical problems with numerical methods in engineering and science courses. The emphasis is on generic algorithms, clean design of programs, use of functions, and automatic tests for verification.
