This book is devoted to the knowledge of up to 250 years of collecting, organizing and preserving animals by generations of scientists. Zoological Collections are a huge resource for modern animal research and should be available for national and international scientists and institutions, as well as prospective public and private customers. Moreover, these collections are an important part of the scientific enterprise, supporting scientific research, human health, public education, and the conservation of biodiversity. Much of what we are beginning to understand about our world, we owe to the collection, preservation, and ongoing study of natural specimens. Properly preserved collections of marine or terrestrial animals are libraries of Earth's history and vital to our ability to learn about our place in its future. The approach employed by the editor involves not only an introduction to the topic, but also an external view on German collections including an assessment of their value in the international and national context, and information on the international and national collection networks. Particular attention is given to new approaches of sorting, preserving and researching in Zoological Collections as well as their neglect and/or threat. In addition, the

book provides information on all big Public Research Museums, on important Collections in regional Country and local District Museums, and also on University collections. This is a highly informative and carefully presented book, providing scientific insight for readers with an interest in biodiversity, taxonomy, or evolution, as well as natural history collections at large.

History of Soybeans and Soyfoods in the Netherlands, Belgium and Luxembourg (1647-2015) State University of New York Press

The artificial intelligence (AI) landscape has evolved significantly from 1950 when Alan Turing first posed the question of whether machines can think. Today, AI is transforming societies and economies. It promises to generate productivity gains, improve well-being and help address global challenges, such as climate change, resource scarcity and health crises.

J. C. Poggendorffs biographisch-literarisches handwörterbuch für mathematik, astronomie, physik mit geophysik, chemie, kristallographie und verwandte wissensgebiete OECD Publishing

Summarizes the current state of the art of uranium mill tailings disposal and the results from an IAEA Coordinated Research Project (CRP) on technologies and strategies for their long term stabilization. The aim of the CRP was to develop conceptual and technical solutions that render tailings more inert over prolonged time spans.

Energy – in the headlines, discussed controversially, vital. The use of regenerative energy in many primary forms leads to the necessity to store grid dimensions for maintaining continuous supply and enabling the replacement of fossil fuel systems. Chemical energy storage is one of the possibilities besides mechano-thermal and biological systems. This work starts with the more general aspects of chemical energy storage in the context of the geosphere and evolves to dealing with aspects of electrochemistry, catalysis, synthesis of catalysts, functional analysis of catalytic processes and with the interface between electrochemistry and heterogeneous catalysis. Top-notch experts provide a sound, practical, hands-on insight into the present status of energy conversion aimed primarily at the young emerging research front.

Salient is based on a simple premise: everybody has a brand he needs to build, promote, and manage. Salient provides marketers and business professionals with a roadmap to build personal and business brands that stand out. When thinking about brands, conventional wisdom prompts us to recall the likes of Apple, Coca Cola, Levi's, Nike, Toyota, or McDonald's.

Beyond these obvious examples, artists, places, and public figures are also brands, all trying to stand out in a crowded world. That's how most of us associate Disneyland with "the happiest place on earth" and remember that "what happens in Vegas, stays in Vegas." That's why Lady Gaga wears outrageous costumes, Anna Wintour is hardly ever seen without her black sunglasses, and Donald Trump reportedly spent \$70,000 on hair styling when hosting *The Apprentice*. Salient provides its readers with a clear and simple roadmap to build a differentiated personal or business brand. The first part of Salient demystifies marketing and branding by showing that successful brands and individuals are not particularly talented, creative, or educated. It explains why "perception is the truth," how consumers and very small brands can influence and even unsettle large institutions, and how rebels and misfits like Steve Jobs, John Lennon, and Elon Musk have built global brands. In the second part, Salient provides the reader with seven strategies to build and grow differentiated personal or business brands on a shoestring budget.

The Jewish Encyclopedia Jarrold

Publishing

This book presents programmatic texts on biosemiotics, written collectively by world leading scholars in the field (Deacon, Emmeche, Favareau, Hoffmeyer, Kull, Markoš, Pattee, Stjernfelt). In addition, the book includes chapters which focus closely on semiotic case studies (Bruni, Kotov, Maran, Neuman, Turovski). According to the central thesis of biosemiotics, sign processes characterise all living systems and the very nature of life, and their diverse phenomena can be best

explained via the dynamics and typology of sign relations. The authors are therefore presenting a deeper view on biological evolution, intentionality of organisms, the role of communication in the living world and the nature of sign systems — all topics which are described in this volume. This has important consequences on the methodology and epistemology of biology and study of life phenomena in general, which the authors aim to help the reader better understand.

Anarchism in Germany Birkhäuser

The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive index. 168 photographs and illustrations - mostly color. Free of charge in digital PDF format on Google Books.

Chemical Energy Storage Routledge

The PISA 2003 Assessment Framework presents the conceptual underpinning of the PISA 2003 assessments. Within each assessment area, the volume defines the content that students need to acquire, the processes that need to be performed and the contexts in which knowledge and skills are applied.

Cold Molecules CRC Press

The world's most comprehensive, well documented and well illustrated book on this subject. With extensive subject and geographical index. 338 photographs and illustrations, many old and rare, many recent in color. Free of charge in digital PDF format on Google Books.

Oxide Surfaces Routledge

A list of 5,173 persons living in the Grand Duchy of Posen providing information including their name, town of residence, occupation and additional commentary.

Mining and Selling Radium and Uranium

Elsevier

Presented here is the story of the mining

and sale of uranium and radium ore through biographical vignettes, chemistry, physics, geology, geography, occupational health, medical utilization, environmental safety and industrial history. Included are the people and places involved over the course of over 90 years of interconnected mining and sale of radium and uranium, finally ending in 1991 with the abandonment of radium paint and medical devices, Soviet nuclear parity, and the Radiation Exposure Compensation Act.

The Life of August Wilhelm Schlegel, Cosmopolitan of Art and Poetry

Soyinfo Center

This book, designed for students who have already developed a basic competence in German, aims to broaden and improve their vocabulary by providing detailed information on groups of German words with related meanings. It is invaluable as a guide to finding the right word for the context. In order to enhance understanding of the structure of the German vocabulary, groups of synonyms are organised under German (rather than English) headwords. All entries are accompanied by an example of usage and English glosses and there are two indexes allowing users quickly to locate words in German or English. The book takes full account of register variation, indicating the degree of formal or informal use, and reflects regional usage especially in Austria and Switzerland. It is an essential reference for intermediate and advanced students as well as teachers and other professional linguists seeking access to the finer nuances of the German language.

In July 2020, the Investment Committee recommended to Council to invite

Uruguay to become the 50th adherent to the OECD Declaration on International Investment and Multinational Enterprises. This OECD Investment Policy Review of Uruguay documents the progress made in recent years to align investment policies with the national development strategy in pursuit of the Sustainable Development Goals (SDGs).

German books in print World Scientific

The conservation of historic monuments, sites and structures constitutes an inter-professional discipline co-ordinating a range of aesthetic historic, scientific and technical methods. Conservation is a rapidly developing field, which, by its true nature, is a multidisciplinary activity with experts respecting one another's contributions and combining to form an effective team. Conservation is an artistic activity aided by scientific and historical knowledge. Main topics at this Congress included: - the most appropriate methodology for the assessment of the degree of weathering of stone - development of new methods and instruments for the diagnosis of the state of conservation, for the study of alteration mechanisms and for conservation treatments. - the definition of Technical European Standard Methods for the evaluation of conservation treatments of artistic and historic stone objects and monuments.

PISA The PISA 2003 Assessment Framework Mathematics, Reading, Science and Problem Solving Knowledge and Skills OECD Publishing

Women engineers have been in the public limelight for decades, yet we have surprisingly little historically grounded understanding of the patterns of employment and education of women in this field. Most studies are either policy papers or limited to statistical analyses. Moreover, the scant historical research

so far available emphasizes the individual, single and unique character of those women working in engineering, often using anecdotal evidence but ignoring larger issues like the patterns of the labour market and educational institutions. *Crossing Boundaries, Building Bridges* offers answers to the question why women engineers have required special permits to pass through the male guarded gates of engineering and examines how they have managed this. It explores the differences and similarities between women engineers in nine countries from a gender point of view. Through case studies the book considers the mechanisms of exclusion and inclusion of women engineers.

Agonistics Oxford University Press, USA

The book is a multi-author survey (in 15 chapters) of the current state of knowledge and recent developments in our understanding of oxide surfaces. The author list includes most of the acknowledged world experts in this field. The material covered includes fundamental theory and experimental studies of the geometrical, vibrational and electronic structure of such surfaces, but with a special emphasis on the chemical properties and associated reactivity. The main focus is on metal oxides but coverage extends from 'simple' rocksalt materials such as MgO through to complex transition metal oxides with different valencies.

Portals to the Past and to the Future Walter de Gruyter GmbH & Co KG

Selected by Robin Hanbury-Tenison, whom the Sunday Times called the 'greatest explorer of the last twenty years', this is a comprehensive anthology of the writings of explorers through the ages, now fully revised and updated. The ultimate in travel writing,

these are the words of those who changed the world through their pioneering search for new lands, new peoples, and new experiences. Divided into geographical sections, the book takes us to Asia with Vasco da Gama, Francis Younghusband, and Wilfred Thesiger, to the Americas with John Cabot, Sir Francis Drake, and Alexander Von Humboldt, to Africa with Dr David Livingstone and Mary Kingsley, to the Pacific with Ferdinand Magellan and James Cook, and to the Poles with Robert Peary and Wally Herbert. Driven by a desire to discover that transcends all other considerations, the vivid writings of these extraordinary people reveal what makes them go beyond the possible and earn the right to be known as explorers.

Towards A Semiotic Biology: Life Is The Action Of Signs Elsevier

Stefan Borzillo examines a large variety

of CoPs by means of six success factors and identifies three basic types: innovating strategic, operational excellence, and social and productive space CoPs. He shows that innovating strategic CoPs are strongly sponsored by management, that operational excellence CoPs are used to multiply technical and operational practices throughout an organization, and that social and productive space CoPs owe their success to their members' sense of security.
