This is a new analysis of recent changes in important Japanese institutions. It addresses the origin, development, and recent adaptation of core institutions, including financial institutions, corporate governance, lifetime employment, and the amakudari system. After four decades of rapid economic growth in Japan, the 1990s saw the country enter a prolonged period of economic stagnation. Policy reforms were initially half-hearted, and businesses were slow to restructure as the global economy changed. The lagging economy has been impervious to

aggressive fiscal stimulus measures and has been plagued by ongoing price deflation for years. Japan's struggle has called into question the ability of the country's economic institutions, originally designed to support factor accumulation and rapid development, to adapt to the new economic environment of the twenty-first century. This book discusses both historical and international comparisons including Meiji Japan, and recent economic and financial reforms in Korea, Scandinavia, Switzerland, and New Zealand, placing the current institutional changes in perspective. The contributors argue that, contrary to conventional wisdom that Japanese institutions have remained relatively rigid, there has been significant institutional change over the last decade.

Excerpt from Memorials of an Ancient House: A History of the Family of Lister or Lyster He thought its merits were his own, was not a whit more lacking in sense than he who would persuade us that pedigree goes for nothing in the history of \mankind. The records of a family, rightly studied, whether it be what is called old or new, may throw light not only on the history of a district or a province or a nation, but on some of the deepest problems connected with science and religion. General Electric entered the railroad industry in the early twentieth century and this collection of history explores all types of electric locomotives with a stunning collection of archival

black-and-white, period, and modern color photography. Depicting a broad cross-section of American railroads in a variety of regions both urban and remote, Brian Solomon leads us through GE's entire locomotive history, from the first electric S motors to today's colossal, 6,000-horsepower diesel-electrics. Witness electrical legends such as the Pennsylvania Railroad's E44s, Amtrak's E60s, and Milwaukee Road's "Little Joes", just to name a few. All in all, Solomon gives us a brilliant explanation of the locomotives, the terrain they covered, pioneering GE efforts, and even the marketplace competition and the power race that fueled the development of these awesome machines.

This is the untold story of the hundreds of New Zealand railwaymen - shunters, builders, engine drivers, firemen, engineers - who answered the call to construct and operate a railway network in the Western Desert during the Second World War. Overlooked in other war histories, these men played a significant role in the Allied victory in North Africa. The desert railway became a crucial strategic operation, transporting soldiers, equipment and supplies to the front line, that the Germans were determined to destroy. The various challenges they faced, from relentless bombing, to the dreaded fifty-day-long khamseen winds, to the siege of Tobruk, culminated in the second Battle of El Alamein, during which Field Marshal Montgomery stated, 'Well, now it's the railway versus Rommel.' The Desert Railway is a tribute to the courage and enterprise of these railwaymen who kept the trains running no matter what.

The fascinating story of the network that made modern India. The railways brought modernity to India. Its vast network connected the far corners of the subcontinent, making travel,

communication and commerce simpler than ever before. Even more importantly, the railways played a large part in the making of the nation: by connecting historically and geographically disparate regions and people, it forever changed the way Indians lived and thought, and eventually made a national identity possible. This engagingly written, anecdotally told history captures the immense power of a business behemoth as well as the romance of train travel; tracing the growth of the railways from the 1830s (when the first plans were made) to Independence, Bibek Debroy and his co-authors recount how the railway network was built in India and how it grew to become a lifeline that still weaves the nation together. This latest volume in The Story of Indian Business series will delight anyone interested in finding out more about the Indian Railways.

Chicago's extensive transit system first started in 1859, when horsecars ran on rails in city streets. Cable cars and electric streetcars came next. Where new trolley car lines were built, people, businesses, and neighborhoods followed. Chicago quickly became a world-class city. At its peak, Chicago had over 3,000 streetcars and 1,000 miles of track--the largest such system in the world. By the 1930s, there were also streamlined trolleys and trolley buses on rubber tires. Some parts of Chicago's famous "L" system also used trolley wire instead of a third rail. Trolley cars once took people from the Loop to such faraway places as Aurora, Elgin, Milwaukee, and South Bend. A few still run today.

Egyptologist Gerald Massey challenged readers in *A Book of the Beginnings* to consider the argument that Egypt was the

birthplace of civilization and that the widespread monotheistic vision of man and the metaphysical was, in fact, based on ancient Egyptian myths. In *The Natural Genesis*, presented here in an omnibus edition, Massey delivers a sequel, delving deeper into his compelling polemic. In Volume I, he offers a more intellectual, fine-tuned analysis of the development of society out of Egypt. From the simplest signs (numbers, the cross) to the grandest archetypes (darkness, the mother figure), Massey carefully and confidently lays the cultural and psychosocial bricks of evolutionism. Volume II provides detailed discourse on the Egyptian origin of the delicate components of the monotheistic creed. With his agile prose, Massey leads an adventurous examination of the epistemology of astronomy, time, and Christology--and what it all means for human culture. British author GERALD MASSEY (1828-1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best known works are in the realm of Egyptology, including *The Book of the Beginnings*, *The Natural Genesis*, and *Ancient Egypt: The Light of the World*.

When Saigon fell to North Vietnamese forces on April 30, 1975, the communist victory sent shockwaves around the world. Using ingenious strategy and tactics, Hồ Chí Minh had shown it was possible for a tiny nation to defeat a mighty Western power. The

same tactics have been studied and replicated by revolutionary forces and terrorist organizations across the globe. Drawing on recently declassified documents and rare interviews with Hồ Chí Minh's strategists and operatives, this book offers fresh perspective on his blueprint and the reasons behind both the French (1945-1954) and the American (1959-1975) failures in Vietnam, concluding with an analysis of the threat this model poses today.
