Phenomenology represents a mainstream in the philosophy of subjectivity as well as a rich tradition of inquiry in psychiatry. The conceptual and empirical study of language has become increasingly relevant for psychiatric research and practice. Schizophrenia is still the most enigmatic and most relevant mental disorder. This volume represents an attempt to bring

specialists from different fields together in order to integrate various conceptual and empirical approaches for the benefit of schizophrenic research. We hope that it will facilitate discussions among members of such diverse fields as psychiatry, psychology, and philosophy.

Home Exercise Programs for Musculoskeletal and Sports Injuries: The Evidence-Based Guide for Practitioners is designed to assist and guide healthcare professionals in prescribing home exercise programs in an efficient and easy to follow format. With patient handouts that are comprehensive and customizable, this manual is intended for the busy practitioner in any medical

specialty who prescribes exercise for musculoskeletal injuries and conditions. The most central aspect of any therapeutic exercise program is the patient's ability to perform the exercises effectively and routinely at home. This book is organized by major body regions from neck to foot and covers the breadth of home exercises for problems in each area based on the current literature. Each chapter begins with a brief introduction to the rehabilitation issues surrounding the types of injuries that can occur and general exercise objectives with desired outcomes, followed by a concise review of the specific conditions and a list of recommended exercises. The remainder of the chapter is a visual presentation of the exercises with high-quality

photographs and step-by-step instructions for performing them accurately. The most fundamental exercises to the rehabilitation of each specific region are presented first as the essential building blocks, followed then by condition-specific exercises that advance throughout the chapter. Using this section, the healthcare practitioner can provide patients with handouts that require little to no explanation and can customize the program and modify instructions to fit individual patient needs and abilities-- with confidence the handouts will be a valuable tool to help patients recover successfully from musculoskeletal and sports injuries. Key Features: Concise evidence-based guide for practitioners who prescribe home exercise programs for musculoskeletal

and sports injuries Presents foundational, intermediate, and more advanced exercises for each body region and condition based on the current literature to achieve desired outcomes Highly visual approach with over 400 photographs demonstrating each exercise effectively with step-by-step instructions Each chapter includes evidence-based recommendations and goals for advancement of the exercise program Includes digital access to the ebook for use on most mobile devices and computers
Study Guide for Maternal-Child Nursing - E-Book John Wiley & Sons
In response to the increasing need for progressing a treatment plan, this text shows the reader how to prescribe therapeutic exercise based on the best

evidence and clinical experience. It teaches therapists how to make informed clinical decisions about the best way to progress treatment for their clients that integrates balance, strength, endurance and all of the areas necessary for optimal function. It also provides the underlying theories of treatment planning, using APTA's Guide to Physical Therapist Practice, 2nd Edition as the basis for practice. Three on-going client cases are woven throughout the text, promoting clinical reasoning skills and providing a framework to construct new knowledge. Learning objectives at the start of each chapter help readers focus their attention on important principles and concepts. "Stop and Think" questions mixed throughout the chapters show students how to reflect on

new information and how it may be applied in a variety of situations. Client vignettes in each chapter illustrate the importance of learning the concepts for transfer to new situations. Concept maps illustrate how the chapter is organized and how elements fit together to provide a framework for constructing knowledge. A focus on the disablement model allows students to apply therapeutic exercise for maximum functionality as defined by the APTA. A focus on research demonstrates the best way to prescribe exercise by focusing on best practice. A companion DVD provides 60 minutes of video clips that gives students the ability to observe an activity, critique the technique, compare and contrast movement in a wide range of ages, select the appropriate exercise for the

job and many other applications.
