Network World Bloomsbury Publishing USA Undercurrents engages the critical rubric of "queer" to examine Hong Kong's screen and media culture during the transitional and immediate postcolonial period. Helen Hok-Sze Leung draws on theoretical insights from a range of disciplines to reveal parallels between the crisis and uncertainty of the territory's postcolonial transition and the queer aspects of its cultural productions. She explores Hong Kong cultural productions ♦ cinema, fiction, popular music, and subcultural projects ♦ and argues that while there is no overt consolidation of gay and lesbian identities in Hong Kong culture,

undercurrents of diverse and complex expressions of gender and sexual variance are widely in evidence. Undercurrents uncovers a queer media culture that has been largely overlooked by critics in the West and demonstrates the cultural vitality of Hong Kong amidst political transition.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment

facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb,

Project Interpersonal Skills for Executorship Rowman & Littlefield

There are many books written about estate planning but very little discussing

about the impact those decisions have on connected people, individuals, and family members. The majority of books are written from a legal perspective, which assists the professional reader, such as a lawyer or barrister and not the softer side of the management of the estate. My advice for information purposes is not to draft your own will or trust but to find a competent legal firm to advise you. The purpose of this book is to equip a person with tools and techniques for situations that can happen in the real world. This book is not intended as a self-help guide but more of a theoretical and practical approach using project management tools and techniques. This is not only to help solve a legal problem but also to introduce estate planning from a humanistic perspective. Therefore, this book is readable for a lay person who wishes and desires to research this subject in depth and take control of his or her own legal affairs during the administration of the estate. More importantly, the reader will have the right mind-set for the important obligation that rest upon their shoulders. This book focuses on what the project executor does, what skills set he or she requires during the project life cycle, and how to manage the stages until a conclusion or desired outcome is reached.

This book presents a new view of innovation, seeking to disclose how strategic reflexivity is embodied in specific innovation practices and management roles. From an evolutionary point of view, the contributors argue that firms and organisations are increasingly forced to take into account the growing complexity of the environment. To do this, they must create strategies that interpret external expectations, but also deal with the internal reflexivity processes caused by innovation. The way to bridge strategy and innovation, they suggest, is through strategic reflexivity. The contributions, both theoretically and empirically based, range across a number of disciplines, including economics, business administration, innovation studies, management theory, sociology and political science. These are all united by a theoretical core: the perception that strategic reflexivity is vital to business development, and that innovation should be much more thoroughly analysed.

CanMEDS is an educational framework identifying and describing seven Roles that lead to optimal physician performance, care delivery and health care outcomes: Medical Expert (central Role), Communicator, Collaborator, Leader (formerly Manager), Health Advocate, Scholar and Professional. The overarching goal of CanMEDS is to improve patient care. The CanMEDS model has been adopted in Canada and internationally, both in and outside the health professions, making it the most recognized and widely applied health profession competency framework in the world. In Canada, the framework is used by residents in all medical specialties as part of their postgraduate training, and it provides the foundation for the exam and accreditation processes. Since its adoption, the CanMEDS Framework has been updated twice; most recently in 2015. The CanMEDS 2015 Framework has been endorsed by 12 Canadian medical organizations who will work to adapt and integrate CanMEDS for their specific context. What areas has the Framework changed from the previous version (2005)? The addition of complementary milestones is arguably the largest change between the 2005 and 2015 versions of the CanMEDS 2015 Framework. The milestones will be available in an online companion document, the CanMEDS Milestones Guide, and unlike the Framework they will undergo continual revision as educators modify the

milestones for their specific specialty. New themes have been introduced, such as patient safety, quality improvement, handovers, and eHealth. A renewed emphasis on the overall coherence of the framework and on its practical application. Role descriptions and definitions are expressed in simpler, more direct language. Overlapping areas between Roles have been minimized. Competencies and milestones describe the abilities to be demonstrated in practice, as distinct from the information or content related to aspects of a Role."

Architects and contract administrators spend a great deal of time writing letters of various types. Many of them are routine and repetitive in character, but they require proper consideration if potentially dangerous liability situations are to be avoided. This book provides some 285 standard letters for use at all stages of project administration. To assist the user, they are grouped into sections which correspond with the RIBA Plan of Work: the aim is to cover all the common situations encountered in practice. The book has been revised to take account of the latest contract revisions and many letters have been added. Unless otherwise stated, all letters are suitable for use with: JCT 98 WCD 98 IFC 98 MW 98 GC/Works/1 (1998) The latest edition also takes account of the three new RIBA Standard Forms of Agreement for Appointment of an Architect: SFA/99, CE/99 and SW/99 Although primarily written for architects and contract administrators, the book will also be of use to project managers and employers' agents under WCD 98. Contractors will also find much of interest. *Practical Risk Management for EPC / Design-Build Projects* Knopf Books for Young Readers

When all parties involved in the construction process fully understand their roles and are able to anticipate potential points of conflict, disputes and delays will be minimised. The Employer's and Engineer's Guide to the FIDIC Conditions of Contract sets out the essential administrative requirements of a FIDIC based contract by reference to the FIDIC 1999 Red Book. The obligations and duties of the Employer and the Engineer are identified and discussed. Potential pitfalls are highlighted and likely consequences pointed out. The importance of the Employer's role in the preparation of tenders, which fully reflect his requirements and duties and obligations arising in the execution of the works, is emphasised. The key role of the Engineer in the effective administration of contracts after award is examined and commentary provided. Included in the guide are a number of appendices, including model letters which will be of value to less experienced staff (particularly those whose mother-tongue is not the English language). Engineers, quantity surveyors and project managers engaged in the contractual administration of international projects using FIDIC forms of contract will find the concise guidance in simple and jargon-free language provided here invaluable. This, together with the author's

earlier book, Contractor's Guide to the FIDIC Conditions of Contract - which describes the duties, rights and responsibilities of the Contractor - represents the totality of supervision, design and execution of construction projects executed under the FIDIC Conditions of Contract. Many of the books on construction risk management concentrate on theoretical approaches to the accurate assessment of the overall risks of taking on a new project. Less attention is paid to the typical risks to which the operational level of a project is exposed and how operational managers should approach those risks during project implementation. This book identifies precisely where the major EPC/Design-Build risks occur within an operational framework and shows how best to deal with those risks. The book attempts to offer practical advice, approaches and tools for dealing with risks to which the various operational departments are exposed.
