The publication deliberately concentrates on the reception and application of one concept highly influential in the sociology of translation and interpreting, namely habitus. By critically engaging with this Bourdieusian concept, it aspires to re-estimate not only interdisciplinary interfaces but also those with different approaches in the discipline itself. The authors of the contributions collected in this volume, by engaging with the habitus concept, lend expression to the conviction that it is indeed "a concept which upsets", i.e. one with the potential to make a difference to research agendas. They are cutting across diverse traditions of Bourdieu reception within and beyond the discipline, each paper being based on unique research experiences. We do hope that this volume can help to find and maintain the delicate balance between consolidating an area of research by insisting on methodological rigour as well as on the sine-qua-non of a given body of thought on the one hand and being critically inventive on the other.

Art of Nature is an astonishing visual record of the exploration of parts of the natural world that had never previously been documented. It features many of the greatest natural history artists of the last 300 years--Merian, Bartram, Ehret,

the Bauer brothers, Audubon, and Gould. Some were seeking fame as scientists or artists, others sought financial gain or at least the prospect of earning a living in what they loved doing. For some it also provided them with the opportunity to present their view of nature to a wider community. Whatever the reasons, few would have contradicted Humboldt's comment that he was "spurred on by an uncertain longing for what is distant and unknown, for whatever excited my fantasy: danger at sea, the desire for adventures, to be transported from a boring daily life to a marvellous world." Continent by continent, Judith Magee draws on the unrivaled collections of the Library of the Natural History Museum in London to illustrate the development of natural history art through the centuries and its crucial role in furthering people's appreciation of nature all around the world.

Albert Schweitzers Ethik der Ehrfurcht vor dem Leben Penn State University Press

In accordance with the purpose of the series *Traditio Praesocratica*, the present volume, the first in the series, contains the most complete collection ever assembled of the documentary evidence on Thales of Miletus. Approximately 600 texts, dating from the sixth century BCE to the fourteenth century CE, are presented in chronological order, both in the original language (Greek, Latin, Arabic and Persian) and in a facing English translation. The original-language texts are reprinted (with corrections) from Georg Wöhrle's edition (2009). Several texts discovered since the publication of the 2009 edition are included. The English translations were

made by Richard McKirahan from the original texts. Differences between the German and the English translations are noted. An index of names and extensive glossaries and word indexes of the texts and translations are provided.

The eminent China scholar delivers a landmark study of Chinese culture's relationship to the natural environment across thousands of years of history. Spanning the three millennia for which there are written records, *The Retreat of the Elephants* is the first comprehensive environmental history of China. It is also a treasure trove of literary, political, aesthetic, scientific, and religious sources, which allow the reader direct access to the views and feelings of Chinese people toward their environment and their landscape. China scholar and historian Mark Elvin chronicles the spread of the Chinese style of farming that eliminated elephant habitats; the destruction of most of the forests; the impacts of war on the landscape; and the re-engineering of the countryside through gigantic water-control systems. He documents the histories of three contrasting localities within China to show how ecological dynamics defined the lives of the inhabitants. And he shows that China in the eighteenth century was probably more environmentally degraded than northwestern Europe around this time. Indispensable for its new perspective on long-term Chinese history and its explanation of the roots of China's

present-day environmental crisis, this book opens a door into the Chinese past.

Quatremère de Quincy, the most famous art critic at the end of the Enlightenment, published two sets of letters about the role of museums. He first implored them to return works of art to their original settings but later argued in favor of the museum as a place where artworks can be safely stored and made available for artists to study. Immensely controversial and influential since they were written two centuries ago, Quatremère's texts sum up the most bewildering moment of the debate on museums: did the new institution inaugurate the death of art, or bring it to its perfection? This volume offers the first English translation of the letters, as well as an extensive introduction that reveals their content, the reason for their intellectual success, and how they enlarge contemporary disputes about cultural property, national claims and universal beauty.

Der Theologe und Philosoph Albert Schweitzer machte der Philosophie seiner Zeit den Vorwurf, ihre Ethik auf das zwischenmenschliche Verhalten beschränkt zu haben. Aber nur eine Ethik, die das Verhalten des Menschen zu allen lebenden Wesen zum Inhalt habe, sei in der Lage, die Kultur tiefgreifend zu beeinflussen. Ausgangspunkt seiner Ethik der

Ehrfurcht vor dem Leben ist die grundlegende Einsicht: "Ich bin Leben, das leben will, inmitten von Leben, das leben will." Angesichts von anthropogener Klimaerwärmung und Corona-Pandemie liegt die Aktualität des ethischen Ansatzes von Schweitzer auf der Hand. Patentrezepte gibt es allerdings auch mit Schweitzer nicht. Darum sind wir herausgefordert, die Problemlagen in unserer Zeit und Welt zu analysieren und im Geist der Ehrfurcht vor dem Leben Lösungsmöglichkeiten zu suchen. Der Band konzentriert sich auf die Landwirtschaft und die Tierhaltung – zwei elementare Lebensbereiche, wo gegenüber der bisherigen Praxis ein Umdenken und Umsteuern notwendig ist. Mit Beiträgen von Eve-Marie Engels, Michael Großmann, Dagmar Gruß, Gottfried Schüz, Hans-Georg Wittig, Werner Zager und Ingo Zölllich. [Albert Schweitzer's Ethics of Reverence for Life - Taking the Example of Species-appropriate Animal Husbandry and Ecological Agriculture] The theologian and philosopher Albert Schweitzer accused the philosophy of his time of having limited its ethics to interpersonal behavior. But only an ethics, which has the behavior of humans to all living beings in view, is able to affect the culture profoundly. The starting point of his ethics of reverence for life is the fundamental insight: "I am life that wants to live, in the midst of life that wants to live." In the face of anthropogenic global warming and corona pandemic, the topicality of Schweitzer's ethical approach is obvious. We are therefore challenged to analyze the problems of our time and world in a spirit of respect for life and to seek possible solutions. The volume focuses on agriculture and animal husbandry –

two elementary areas of life where a rethinking and redirection is necessary as opposed to current practice.

The woman in Leonardo da Vinci's work gazes out from the canvas with a quiet serenity. But what lies behind the famous smile? Shrouded in mystery, the Mona Lisa has attracted more speculation and questioning than any other work of art ever created. This work provides an aide memoire of the world's most famous painting. The full-page colour plates portray the Mona Lisa in close-up photographs, while Serge Bramly, the author, explores its shadowy history and the fascination the painting has engendered.

Branham expounds with sophistication and subtlety the essential ingredients of Lucian's satirical humor. He makes frequent reference to its importance for comic theory and literary history.

Letters to Miranda and Canova on the Abduction of Antiquities from Rome and Athens Penn State Press

William Bartram's love of nature led him to explore the environs of the American Southeast between 1773 and 1777. Here he collected plants and seeds, kept a journal of his observations of nature, and made drawings of the plants and animals he encountered. The completed

drawings were sent to his patron in London, and these make up the bulk of the collection held at London's Natural History Museum. The Art and Science of William Bartram brings together, for the first time, all sixty-eight drawings by Bartram held at the Natural History Museum, along with works by some of the most well-known natural history artists of the eighteenth and nineteenth centuries. The volume explores Bartram's writings and artwork and reveals how influential he was in American science of the period. Bartram was an inspiration to a whole generation of young scientists and field naturalists. He was an authority on the birds of North America and on the lifestyle, culture, and language of the indigenous people of the regions through which he traveled. His work influenced Wordsworth, Coleridge, and other writers and poets throughout the past two hundred years, and his drawings reveal an ecological understanding of nature that only truly developed in the latter half of the nineteenth century.

A detailed, analytical study of the life

and times of this brilliant but bizarre personality (and the sexually erotic times he lived in), containing the essence of all his writings, based on research by Bloch in private archives of the French Government, and Bloch's discovery of de Sade's unpublished manuscript of 120 Days of Sodom in Marseilles. The work contains a precis of the 120 Days of Sodom, the first attempt systematically to catalog and describe abnormal sexual behavior -- 100 years before Krafft-Ebing. A serious academic study of France during de Sade's time, its sexual morality, de Sade's works, and the role of sadism in literature, etc., this biography precedes de Beauvoir's *Faut-il Brûler de Sade?* and began the resuscitation and modern study of De Sade. The author Iwan Bloch, a German physician, won a distinguished name in the world of science in the fields, of medical history and anthropology.
