This book develops a unified, comprehensive account of the important chemical processes in soils that can be described by reactions. The perspective taken is that of chemical thermodynamics and kinetics applied to soil systems in detail in order to provide an understanding of phenomena ranging from complexation reactions to colloidal flocculation. Problem sets are included at the end of each chapter.

With Notes from the World's Best-Loved Commentary For 300 years, believers have turned to Matthew

Henry's timeless commentary for clear, concise help in understanding the Bible and relating its wisdom to practical Christian living. His unrivaled ability to combine comprehensive biblical exposition and down-to-earth guidance for daily life has established Henry's reputation as a trusted and beloved teacher. Charles H. Spurgeon called it, "a Christian's companion, suitable to everybody, instructive to all." The Matthew Henry Study Bible blends his inspirational notes with a full-featured KJV Bible, to enable readers to benefit from the simple piety and no-nonsense application of the biblical lessons that are the enduring legacy of his writings. Classically

designed to honor the history of the content but updated with helpful features for easy contemporary use, The Matthew Henry Study Bible accommodates the needs of the serious Bible student and provides more clarity for the interested layperson. Study features include: - Clear new typesetting of text and notes - Words of Christ in red - Presentation page - Book introductions, footnotes, and in-text quotations from Matthew Henry's writings - Side-column references - Biography of Matthew Henry - Concordance - 8-page full-color map section

The fortifications built around Greek cities are among the most impressive of ancient remains. McNicoll analyzes and illustrates fortified sites, ranging from Ephesus and Assos on the Aegean to Dura Europus on the

Euphrates. These sites provide fascinating evidence of secular classical architecture, as well as insights on the political history of Hellenistic Greece.

Although the government of the United States is traditionally viewed as a democracy, there is considerable disagreement about what democracy means and implies. In a comprehensive study Professor Edelman examines the three democratic paradigms most prevalent in America today: natural rights, contract, and competition. Theories based on these paradigms lead to different ideas of

democracy, each of which yields variant interpretations of the Constitution. This close relationship between democratic theories and constitutional interpretations is analyzed in an extensive historical introduction, which focuses on some of the major thinkers in American history. Edelman's discussion shows that neither the Constitution nor the development of American political thought can serve as an authoritative basis for any one theory of democracy. Instead of a particular theory, the historical constant was an appeal to reason inherent in our basic charter. In his methodological section, Edelman argues that we must use reason to clarify

the latent values inherent in the differing concepts of democracy and the consequences that flow from them. He analyzes judicial ideas in the light of three concepts deemed central to any democratic theory—citizenship, political participation, and political freedom—and concludes with a balanced account of contemporary democratic theories, the constitutional theories related to them, and a critique of both.

The Civic Constitution provides a compelling case for rethinking the U.S. Constitution. By exploring pivotal struggles over governmental power, individual rights, and the boundaries of citizenship, this book challenges reigning approaches and reveals the profound importance of 'civic founders' who worked to reinvent the constitutional order.

Which ancient army boasted the largest fortifications, and how did the competitive build-up of military capabilities shape world history? Few realise that imperial Rome had a serious competitor in Late Antiquity. Late Roman legionary bases, normally no larger than 5ha, were dwarfed by Sasanian fortresses, often covering 40ha, sometimes even

125-175ha. The latter did not necessarily house permanent garrisons but sheltered large armies temporarily – perhaps numbering 10-50,000 men each. Even Roman camps and fortresses of the Early and High Empire did not reach the dimensions of their later Persian counterparts. The longest fort-lined wall of the late antique world was also Persian. Persia built up, between the fourth and sixth centuries AD, the most massive military infrastructure of any ancient or medieval Near Eastern empire – if not the ancient and medieval world. Much of the known defensive network was directed against Persia’s powerful neighbours in the north rather than

the west. This may reflect differences in archaeological visibility more than troop numbers. Urban garrisons in the Romano-Persian frontier zone are much harder to identify than vast geometric compounds in marginal northern lands. Recent excavations in Iran have enabled us to precision-date two of the largest fortresses of Southwest Asia, both larger than any in the Roman world. Excavations in a Gorgan Wall fort have shed much new light on frontier life, and we have unearthed a massive bridge nearby. A sonar survey has traced the terminal of the Tammisheh Wall, now submerged under the waters of the Caspian Sea. Further work has focused on a

vast city and settlements in the hinterland. Persia's Imperial Power, our previous project, had already shed much light on the Great Wall of Gorgan, but it was our recent fieldwork that has thrown the sheer magnitude of Sasanian military infrastructure into sharp relief.
