Paradigm Shift to Effects-Based Space: Near-Space as a Combat Space Effects Enabler DIANE Publishing

Xiaoqun Xu makes a compelling and original contribution to the study of China's modernization with this book on the rise of professional associations in Republican China in their birthplace of Shanghai, and of their political and socio-cultural milieu. This 2001 book is rich in detail about the key professional and political figures and organizations in Shanghai, filling an important gap in its social history. The professional associations were, as the author writes, 'unambiguously urban and modern in their origins and functions ... representing a new breed of educated Chinese'

and they pioneered a new type of relationship with the state. Xu addresses a central issue in China studies, the relationship between state and society, and proposes an alternative to the Western-derived concept of civil society. This book illuminates the complexity of modernization and nationalism in twentieth-century China, and provides a concrete case for comparative studies of professionalization and class formation across cultures.

In this sumptuous full-color compendium, award-winning designer Monica Botkier celebrates seventy of the most coveted bags of the past seventy-five years, from Chanel, Dior, Gucci, Hermès, Yves Saint Laurent, Louis Vuitton, and other international couture houses, as well as top bag designers such as Anya Hindmarch and Nancy Gonzalez. Exquisitely crafted luxury handbags are an obsession. The look, the feel of soft leather, that new bag smell that induces a swoon—a gorgeous handbag does more than complete a look, it telegraphs taste and chic, and it inspires envy, whether it's an Hermès Birkin, a quilted Chanel Boy bag with its signature gold chain, or a Céline Mini Luggage Tote. Award-winning handbag designer Monica Botkier pays homage to these gorgeous objects of desire and the top couture houses and artists that have designed and produced them from the end of World War II to today. Handbags: A Love Story showcases the creations of designers such as Azzedine Alaïa, Balenciaga, Bottega Veneta, Céline, Chanel, Chloé, Christian Dior, Mark Cross, Fendi, Salvatore Ferragamo, Givenchy, Goyard, Gucci, Hermès, Anya Hindmarch, Judith Leiber, Olympia Le-Tan, Loewe, Mansur Gavriel, Stella McCartney, Alexander McQueen, Miu Miu, Moschino, Mulberry, Prada, Yves Saint Laurent, Valentino, Roger Vivier, Louis Vuitton, and more. This magnificent, eye-catching anthology tells the story of seventy bags in 200 stunning photographs and vintage and contemporary advertisements and illustrations, as well as quotes, anecdotes, and interviews with designers, stylists, and editors. Each entry offers a concise yet in-depth look at a specific bag and its history—from a celebrity muse, such as Jane Birkin, to collaborations such as the graffiti-splattered bags Marc Jacobs and Stephen Sprouse created for Louis Vuitton. An informative,

entertaining exploration of how "It Bags" have influenced fashion, culture, and feminine identity, Handbags: A Love Story touches on a wide-range of subjects, such as how a bag is constructed and handbags on the silver screen. With an elegant full-color silkscreened cloth case and a thick acetate four-color jacket; two long, wide satin markers, and two-color endpapers, this gorgeous tribute is an essential accessory for handbag fanatics, fashion lovers, and pop culture enthusiasts.

Study of the phenomena of bacterial adhesion to surfaces has accelerated considerably over the past 10 to 15 years. During this period, microbiologists have become increasingly aware that attachment to a substratum influences considerably the activities and structures of microbial cells. Moreover, in many cases attached communities of cells have important effects on their substratum and the surrounding environment. Such phenomena are now known to be important in plant and animal hosts, water and soil ecosystems, and man-made structures and industrial processes. Much work on microbial adhesion in the early 1970s was descriptive. Those studies were important for detecting and describing the phenomena of bacterial adhesion to substrata in various environments; the findings have been presented in numerous recently published, excellent books and reviews. In some studies, attempts were made to elucidate some fundamental principles controlling adhesion processes in different

environments containing a variety of microorganisms. Common threads have been observed occasionally in different studies. Taken as a whole, however, the information has revealed that many disparate factors are involved in adhesion processes. Whether a particular microorganism can adhere to a certain substratum depends on the properties of the microbial strain itself and on characteristics of the substratum and of the environment.

This paper is an outgrowth of comments I heard and attitudes I experienced at the JFCOM Joint Space Concept Development and Experimentation Workshop in Norfolk at the end of March 2004. I presented a briefing on near-space at the conference along with colleagues from JFCOM, the Army Space and Missile Defense Battlelab, the Naval Research Laboratory, and the Navy Warfare Development Command. It discussed how many functions that are currently done with satellites could be performed for tactical and operational commanders using near-space assets much more cheaply and with much greater operational utility. The briefing was very well received with nothing but positive comments all around. However, once we broke into focus groups trying to develop exercise inputs for such subjects as operationally responsive space, the near-space concept was almost forgotten. It didn't fit into the normal mindset of what space meant, so it was difficult to convince other group members that it should be discussed in the same breath as, say, a TacSat-type program. After much thought, it was my perception that the problem was one of mindset as to what the word "space" meant to the warfighter. After reading space doctrine (Army, Navy, Air Force,

and Joint), I discovered that the mindset I sensed at the workshop had actually been codified to define space as a place where we operate satellites. That mindset is counterproductive.

In a marketplace that demands perpetual upgrades, the survival of interactive play ultimately depends on the adroit management of negotiations between game producers and youthful consumers of this new medium. The authors suggest a model of expansion that encompasses technological innovation, game design, and marketing practices. Their case study of video gaming exposes fundamental tensions between the opposing forces of continuity and change in the information economy: between the play culture of gaming and the spectator culture of television, the dynamism of interactive media and the increasingly homogeneous mass-mediated cultural marketplace, and emerging flexible post-Fordist management strategies and the surviving techniques of mass-mediated marketing. Digital Play suggests a future not of democratizing wired capitalism but instead of continuing tensions between "access to" and "enclosure in" technological innovation, between inertia and diversity in popular culture markets, and between commodification and free play in the cultural industries.

Fluid Mechanics and Hydraulic Machines Independently Published

This book comprises the proceedings of the 12th National Technical Symposium on Unmanned System Technology 2020

(NUSYS'20) held on October 27–28, 2020. It covers a number of topics, including intelligent robotics, novel sensor technology, control algorithms, acoustics signal processing, imaging techniques, biomimetic robots, green energy sources, and underwater communication backbones and protocols, and it appeals to researchers developing marine technology solutions and policy-makers interested in technologies to facilitate the exploration of coastal and oceanic regions.

Climate Change and Coastal Ecosystems Springer Nature

This book includes research papers from the 11th National Technical Symposium on Unmanned System Technology. Covering a number of topics, including intelligent robotics, novel sensor technology, control algorithms, acoustics signal processing, imaging techniques, biomimetic robots, green energy sources, and underwater communication backbones and protocols, it will appeal to researchers developing marine technology solutions and policy-makers interested in technologies to facilitate the exploration of coastal and oceanic regions.

Cephalopods John Wiley & Sons

Squid, cuttlefish and octopuses, which form the marine mollusc group the cephalopods, are of great and increasing interest to marine biologists, physiologists, ecologists, environmental biologists and fisheries scientists. Cephalopods: ecology and fisheries is a thorough review of this most important animal group. The first introductory section of the book provides coverage of cephalopod form and function, origin and evolution, Nautilus, and biodiversity and zoogeography. The following section covers life cycles, growth, physiological ecology,

reproductive strategies and early life histories. There follows a section on ecology, which provides details of slope and shelf species, oceanic and deep sea species, population ecology, trophic ecology and cephalopods as prey. The final section of the book deals with fisheries and ecological interactions, with chapters on fishing methods and scientific sampling, fisheries resources, fisheries oceanography and assessment and management methods. This scientifically comprehensive and beautifully illustrated book is essential reading for marine biologists, zoologists, ecologists and fisheries managers. All libraries in universities and research establishments where biological sciences and fisheries are studied and taught should have multiple copies of this landmark publication on their shelves.

The perfect guide for veteran structural engineers or for engineers just entering the field of offshore design and construction, *Marine Structural Design Calculations* offers structural and geotechnical engineers a multitude of worked-out marine structural construction and design calculations. Each calculation is discussed in a concise, easy-to-understand manner that provides an authoritative guide for selecting the right formula and solving even the most difficult design calculation. Calculation methods for all areas of marine structural design and construction are presented and practical solutions are provided. Theories, principles, and practices are summarized. The concentration focuses on formula selection and problem solving.

A "quick look up guide", *Marine Structural Design Calculations* includes both fps and SI units and is divided into categories such as Project Management for Marine Structures; Marine Structures Loads and Strength; Marine Structure Platform Design; and Geotechnical Data and Pile Design. The calculations are based on industry code and standards like American Society of Civil Engineers and American Society of Mechanical Engineers, as well as institutions like the American Petroleum Institute and the US Coast Guard. Case studies and worked examples are included throughout the book. Calculations are based on industry code and standards such as American Society of Civil Engineers and American Society of Mechanical Engineers Complete chapter on modeling using SACS software and PDMS software Includes over 300 marine structural construction and design calculations Worked-out examples and case studies are provided throughout the book Includes a number of checklists, design schematics and data tables

Bacterial Adhesion Pergamon

Design theorist Louise Schouwenberg examines the meaning and agency of things as mediators between people and world, both within everyday life and the museum context. Moreover, she questions the market's obsession with novelty in design, and searches for answers how to distinguish novelty for the sake of

novelty from true cultural innovation in design, of which a museum archive testifies. The themes, examples and images are chosen in close consultation with designer Hella Jongerius. Graphic design by Irma Boom. Published on the occasion of the exhibition, Die Neue Sammlung/Beyond The New at The Design Museum, Pinakothek der Moderne, Munich (10 November 2017 - 16 September 2018).

Magnetic Resonance in Biological Systems

Fluid Mechanics And Hydraulic Machines is designed for the course on fluid mechanics and hydraulic machines offered to the undergraduate students of mechanical and civil engineering.

Written in a lucid style, the book lays emphasis on explaining the logic and physics of critical problems to develop analytical skills in the reader.
