The Future of Nursing explores how nurses' roles, responsibilities, and education should change

significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles—including limits on nurses' scope of practice—should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

In this updated edition, Kathryn Neeb continues to squarely address mental health within the scope

of practical/vocational nursing, emphasizing that LPN/LVNs most commonly care for patients with psychiatric problems in general patient care settings rather than in specialized psychiatric facilities. This targeted approach, along with her accessible, friendly writing style, meets the legal licensing needs for the role of the LPN/LVN thus making Fundamentals of Mental Health Nursing the leader in the LPN educational market.
