If you haven't modernized your data cleaning and reporting processes in Microsoft Excel, you're missing out on big productivity gains. And if you're looking to conduct rigorous data

analysis, more can be done in Excel than you think. This practical book serves as an introduction to the modern Excel suite of features along with other powerful tools for analytics. George Mount of Stringfest Analytics shows business analysts, data analysts, and business intelligence specialists how to make bigger gains right from your spreadsheets by using Excel's latest features. You'll learn how to build repeatable data cleaning workflows with Power Query, and design relational data models straight from your workbook with Power Pivot. You'll also explore other exciting new features for analytics, such as dynamic array functions, AI-powered insights, and Python integration. Learn how to build reports and analyses that were previously difficult or impossible to

do in Excel. This book shows you how to:

- Build repeatable data cleaning processes for Excel with Power Query
- Create relational data models and analysis measures with Power Pivot
- Pull data quickly with dynamic arrays
- Use AI to uncover patterns and trends from inside Excel
- Integrate Python functionality with Excel for automated analysis and reporting

Microsoft Excel: Preparing Data, Analysing Data and Designing a Business Model - A Practical Guide (UUM Press) Springer

Microsoft Excel is a powerful tool that can transform the way you use data. This book explains in comprehensive and user-friendly detail how to manage, make sense of, explore and share data, giving scientists at all levels the skills

they need to maximize the usefulness of their data. Readers will learn how to use Excel to:

- * Build a dataset – how to handle variables and notes, rearrangements and edits to data.
- * Check datasets – dealing with typographic errors, data validation and numerical errors.
- * Make sense of data – including datasets for regression and correlation; summarizing data with averages and variability; and visualizing data with graphs, pivot charts and sparklines.
- * Explore regression data – finding, highlighting and visualizing correlations.
- * Explore time-related data – using pivot tables, sparklines and line plots.
- * Explore association data – creating and visualizing contingency tables.
- * Explore differences – pivot tables and data visualizations including

box-whisker plots.

- * Share data – methods for exporting and sharing your datasets, summaries and graphs.

Alongside the text, Have a Go exercises, Tips and Notes give readers practical experience and highlight important points, and helpful self-assessment exercises and summary tables can be found at the end of each chapter. Supplementary material can also be downloaded on the companion website. Managing Data Using Excel is an essential book for all scientists and students who use data and are seeking to manage data more effectively. It is aimed at scientists at all levels but it is especially useful for university-level research, from undergraduates to postdoctoral researchers.

The exercises in this unique book allow students to use spreadsheet programs such as Microsoft Excel to create working population models. The book contains basic spreadsheet exercises that explicate the concepts of statistical distributions, hypothesis testing and power, sampling techniques, and Leslie matrices. It contains exercises for modeling such crucial factors as population growth, life histories, reproductive success, demographic stochasticity, Hardy-Weinberg equilibrium, metapopulation dynamics, predator-prey interactions (Lotka-Volterra models), and many others. Building models using these exercises gives students "hands-on" information about what parameters are important in

each model, how different parameters relate to each other, and how changing the parameters affects outcomes. The "mystery" of the mathematics dissolves as the spreadsheets produce tangible graphic results. Each exercise grew from hands-on use in the authors' classrooms. Each begins with a list of objectives, background information that includes standard mathematical formulae, and annotated step-by-step instructions for using this information to create a working model. Students then examine how changing the parameters affects model outcomes and, through a set of guided questions, are challenged to develop their models further. In the process, they become proficient with many of the functions available on spreadsheet programs and learn to write

and use complex but useful macros. Spreadsheet Exercises in Ecology and Evolution can be used independently as the basis of a course in quantitative ecology and its applications or as an invaluable supplement to undergraduate textbooks in ecology, population biology, evolution, and population genetics.

Looking beyond the complexity and theory of inventory management, authors Geoff Relph and Catherine Milner examine managing inventory and achieving targets. Whilst the first edition mainly focused on planning, this new edition of The Inventory Toolkit includes three new chapters that go beyond planning to implementation. Amongst other topics, the new chapters cover holding and moving inventory, working with suppliers and using stock and flow to identify pinch points and facilitate lean and agile operations. This comprehensive second edition of The Inventory Toolkit includes case studies from diverse industries such as retail and aerospace, and worked examples and regular exercises which illustrate how the inventory tools can be used in

an operational setting. It is an invaluable reference guide for students and practitioners focusing on inventory management and operations management in manufacturing and retail, as well as operational staff involved in the implementation of the MRP and inventory management modules of ERP systems.
