Great Mental Models  
series by Shane

Parrish, New York  
Times bestselling  
author and the mind  
behind the acclaimed  
Farnam Street blog and  
"The Knowledge  
Project" podcast. This  
first book in the series  
is your guide to  
learning the crucial  
thinking tools nobody  
ever taught you. Time  
and time again, great  
thinkers such as

Charlie Munger and Warren Buffett have credited their success to mental models—representations of how something works that can scale onto other fields. Mastering a small number of mental models enables you to rapidly grasp new information, identify patterns others miss, and avoid the common mistakes that hold people back. The Great Mental Models: Volume 1, General Thinking Concepts shows you how making a few tiny changes in the way you think can deliver big results. Drawing on examples from history, business, art, and science, this book details nine of the most versatile, all-purpose mental models you can use right away to improve your decision

making and productivity. This book will teach you how to: Avoid blind spots when looking at problems. Find non-obvious solutions. Anticipate and achieve desired outcomes. Play to your strengths, avoid your weaknesses, ... and more. The Great Mental Models series demystifies once elusive concepts and illuminates rich knowledge that traditional education overlooks. This series is the most comprehensive and accessible guide on using mental models to better understand our world, solve problems, and gain an advantage.

Einstein's Shadow follows a team of elite

scientists on their historic mission to take the first picture of a black hole, putting Einstein's theory of relativity to its ultimate test and helping to answer our deepest questions about space, time, the origins of the universe, and the nature of reality. Photographing a black hole sounds impossible, a contradiction in terms. But Shep Doeleman and a global coalition of scientists are on the cusp of doing just that. With exclusive access to the team, journalist Seth Fletcher spent five years following Shep and an extraordinary cast of characters as they assembled the Event Horizon Telescope, a worldwide network of radio telescopes created to study black

holes. He witnessed the team's struggles, setbacks, and breakthroughs, and, along the way, Fletcher explored the latest thinking on the most profound questions about black holes: Do they represent a limit to our ability to understand reality? Or will they reveal the clues that lead to the long-sought theory of everything? Fletcher transforms astrophysics into something exciting, accessible, and immediate, taking us on an incredible adventure to better understand the complexity of our galaxy, the boundaries of human perception and knowledge, and how the messy endeavor of science really works. Weaving a compelling narrative

account of human ingenuity with excursions into cutting-edge science, Einstein's *Shadow* is a tale of great minds on a mission to change the way we understand our universe—and our place in it.

Often called the most advanced and celebrated mind of the 20th Century, this book allows us to meet Albert Einstein as a person. Explores his beliefs, philosophical ideas, and opinions on many subjects.

**Moonwalking with Einstein**

Have you ever wondered how Einstein, a regular man, can come up with radical ideas that shape the world to be what it is today? Albert Einstein is a familiar name to many in the scientific and non-scientific community due to his revolutionary ideas such as the Theory of Relativity, Special Relativity and significant contributions to the development of Quantum Mechanics. As such, many aspire to be like him and wonder how they can do that. The author believes that one needs to condition his/her mind to be able to think like the world-renowned Mathematical Physicist, Albert Einstein. The road to being

successful can be challenging and it requires grit, confidence and guidance from the right people. Hence, this book is as a must-have guide to readers who wish to be one of the best scientists in the world! Related Link(s) [How to Think Like a Mathematician](#) Peter Lang  
 Albert Einstein once said that all of his most important and productive thinking was done by playing with images in his imagination. Only in a secondary stage did he translate - with great effort, he says - these images into the language of words and mathematics that could be understood by others. According to Thomas G. West, Einstein was a classic example of a strong

visual thinker, a person who tends to think in images and visual patterns, and sometimes has difficulty with words and numbers. In his awarding-winning book, *In the Mind's Eye*, West discussed the connections between highly talented, visually oriented persons like Einstein and certain learning disabilities such as dyslexia. Now, in *Thinking Like Einstein*, West investigates the new worlds of visual thinking, insight, and creativity made possible by computer graphics and information visualization technologies. He argues that, with the rapid spread of inexpensive and powerful computers,

we are now at the beginning of a major transition, moving from an old world based mainly on words and numbers to a new world where high level work in all fields will eventually involve insights based on the display and manipulation of complex information using moving computer images. West profiles several highly creative visual thinkers, such as James Clerk Maxwell, Nikola Tesla, and Richard Feynman, pointing out that there is a long history of using visualization rather than words or numbers to solve problems. Citing the longstanding historical conflicts between image lovers and image haters, West examines the relationship of art,

scientific knowledge, and differences in brain capabilities - observing how modern visual thinkers with visualization technologies seem to have learned how to cut through the problems of overspecialization in academia and in the workplace. West predicts that computer visualization technology will radically change the way we all work and think. For thousands of years the technology of writing and reading has tended to promote the dominance of the left hemisphere of the brain, with its linear processing of words and numbers. Now the spread of graphical computer technologies is permitting a return to our visual roots with a new balance

between hemispheres and ways of thinking - presenting new opportunities for problem solving and big picture thinking. Thus, he argues that the newest technologies will help us to reaffirm some of our oldest capabilities, allowing us to see previously unseen patterns and to restore a balance in thought and action.

Think Like a Rocket Scientist Joseph Henry Press

"I find the idea quite intolerable that an electron exposed to radiation should choose of its own free will, not only its moment to jump off, but also its direction. In that case, I would rather be a cobbler, or even an employee in a gaming house, than a physicist." -Albert

Einstein A scandal hovers over the history of 20th century physics. Albert Einstein-the century's greatest physicist-was never able to come to terms with quantum mechanics, the century's greatest theoretical achievement. For physicists who routinely use both quantum laws and Einstein's ideas, this contradiction can be almost too embarrassing to dwell on. Yet Einstein was one of the founders of quantum physics and he spent many years preaching the quantum's importance and its revolutionary nature. The Danish genius Neils Bohr was another founder of quantum physics. He had managed to solve one of the few physics

problems that Einstein ever shied away from, linking quantum mathematics with a new model of the atom. This leap immediately yielded results that explained electron behavior and the periodic table of the elements. Despite their mutual appreciation of the quantum's importance, these two giants of modern physics never agreed on the fundamentals of their work. In fact, they clashed repeatedly throughout the 1920s, arguing first over Einstein's theory of "light quanta"(photons), then over Niels Bohr's short-lived theory that denied the conservation of energy at the quantum level, and climactically over the new quantum

mechanics that Bohr enthusiastically embraced and Einstein stubbornly defied. This contest of visions stripped the scientific imagination naked. Einstein was a staunch realist, demanding to know the physical reasons behind physical events. At odds with this approach was Bohr's more pragmatic perspective that favored theories that worked, even if he might not have a corresponding explanation of the underlying reality. Powerful and illuminating, Einstein Defiant is the first book to capture the soul and the science that inspired this dramatic duel, revealing the personalities and the passions-and, in the end, what was at stake

for the world.  
How to Think Like Churchill Knopf Canada  
 This book makes a strong case for free schooling, comparing the mind of Albert Einstein - who said much - to Zen conscious practice, which says little but encompasses everything. Examining the work of brain researchers, neuroscientists, physicists, and other scholars to illuminate the commonalities between Einstein's thought and the Zen practice of paying attention to one's present experience, the book reveals their many similarities, showing the development of self-direction as a key to fostering compassionate consideration of others

and to harmonious, semi-effortless learning and living. Examples demonstrate that students who choose to study what is interesting, remarkable, and important for them tend to become more like Einstein than students with the rigid school curricula; students who are free to learn often demonstrate empathy, and less rigid rule-following, while involved in the process of imaginatively becoming their own oracles and self-educators.

**Out of My Later Years** Chronicle Books  
Looking at defining moments in Winston Churchill's life and revealing his key principles, philosophies and decisions, this book will teach you

how to think just like Churchill. Remembered for his leadership during the Second World War, Churchill's commitment to 'never surrender', along with his stirring speeches and radio broadcasts, helped inspire British resistance to the Nazi threat when Britain stood alone against an occupied Europe. But as well as a hugely successful politician, Churchill was also an officer in the British Army, a journalist, historian and a writer, winning the Nobel Prize for Literature in 1953. How to Think Like Churchill reveals the essential principles behind this fascinating leader, exploring the defining moments and enduring speeches that have made him one of the most esteemed figures of the twentieth

century.

Looking for a head start in your undergraduate degree in mathematics?

Maybe you've already started your degree and feel bewildered by the subject you previously loved? Don't panic! This friendly companion will ease your transition to real mathematical thinking.

Working through the book you will develop an arsenal of techniques to help you unlock the meaning of definitions, theorems and proofs, solve problems, and write mathematics effectively. All the major methods of proof - direct method, cases, induction, contradiction and contrapositive - are featured. Concrete

examples are used throughout, and you'll get plenty of practice on topics common to many courses such as divisors, Euclidean algorithms, modular arithmetic, equivalence relations, and injectivity and surjectivity of functions. The material has been tested by real students over many years so all the essentials are covered. With over 300 exercises to help you test your progress, you'll soon learn how to think like a mathematician.

Jay Shetty, social

media superstar and

host of the #1 podcast

On Purpose, distills the

timeless wisdom he

learned as a monk into

practical steps anyone

can take every day to live a less anxious, more meaningful life. When you think like a monk, you'll understand: -How to overcome negativity - How to stop overthinking -Why comparison kills love - How to use your fear - Why you can't find happiness by looking for it -How to learn from everyone you meet -Why you are not your thoughts -How to find your purpose -Why kindness is crucial to success -And much more... Shetty grew up in a family where you could become one of three things—a doctor, a lawyer, or a failure. His family was convinced he had chosen option three: instead of attending his college graduation ceremony, he headed to India to become a

monk, to meditate every day for four to eight hours, and devote his life to helping others. After three years, one of his teachers told him that he would have more impact on the world if he left the monk's path to share his experience and wisdom with others. Heavily in debt, and with no recognizable skills on his résumé, he moved back home in north London with his parents. Shetty reconnected with old school friends—many working for some of the world's largest corporations—who were experiencing tremendous stress, pressure, and unhappiness, and they invited Shetty to coach them on well-being, purpose, and mindfulness. Since

then, Shetty has become one of the world's most popular influencers. In 2017, he was named in the Forbes magazine 30-under-30 for being a game-changer in the world of media. In 2018, he had the #1 video on Facebook with over 360 million views. His social media following totals over 38 million, he has produced over 400 viral videos which have amassed more than 8 billion views, and his podcast, On Purpose, is consistently ranked the world's #1 Health and Wellness podcast. In this inspiring, empowering book, Shetty draws on his time as a monk to show us how we can clear the roadblocks to our potential and power. Combining ancient wisdom and his

own rich experiences in the ashram, Think Like a Monk reveals how to overcome negative thoughts and habits, and access the calm and purpose that lie within all of us. He transforms abstract lessons into advice and exercises we can all apply to reduce stress, improve relationships, and give the gifts we find in ourselves to the world. Shetty proves that everyone can—and should—think like a monk.

Battle Bunny and The Terrible Two Clever science experiments, funny jokes, and robot hijinks await readers in the first of six books in the New York Times bestselling Frank Einstein chapter book series from the mad scientist team of Jon Scieszka and Brian Biggs. The perfect combination to engage and entertain readers, the series features real science facts with adventure and humor, making these books ideal for STEM education. This first installment examines the science of “matter.” Kid-genius and inventor Frank Einstein loves figuring out how the world works by creating household contraptions that are part science, part imagination, and definitely unusual. In

the series opener, an uneventful experiment in his garage-lab, a lightning storm, and a flash of electricity bring Frank’s inventions—the robots Klink and Klank—to life! Not exactly the ideal lab partners, the wisecracking Klink and the overly expressive Klank nonetheless help Frank attempt to perfect his inventions. . . until Frank’s archnemesis, T. Edison, steals Klink and Klank for his evil doomsday plan! Integrating real science facts with wacky humor, a silly cast of characters, and science fiction, this uniquely engaging series is an irresistible chemical reaction for middle-grade readers. With easy-to-read language and graphic illustrations on almost every page, this

chapter book series is a must for reluctant readers. The Frank Einstein series encourages middle-grade readers to question the way things work and to discover how they, too, can experiment with science. In a starred review, Kirkus Reviews raves, "This buoyant, tongue-in-cheek celebration of the impulse to 'keep asking questions and finding your own answers' fires on all cylinders," while Publishers Weekly says that the series "proves that science can be as fun as it is important and useful." Moonwalking with Einstein by Joshua Foer | Summary & Analysis Preview: Moonwalking with Einstein recounts author Joshua Foer's yearlong journey from participant-journalist covering the national memory championships to becoming the 2006 USA World Memory Champion. Other

segments offer a journalistic history of the human relationship with memory, addressing its failings, its successes, and its limitations. Most people operate according to a series of misconceptions about human memory. Above all, many believe that they have an average brain and are therefore incapable of performing mental feats such as swiftly memorizing a deck of playing cards shuffled into random order. This belief, however, is false. Memory champions are no smarter than anyone else and have unremarkable brains from a biological standpoint. The difference is in how memory champions use their brain. They employ techniques and

training to overcome shortcomings that are hard-wired into the human brain anatomy. Even those who appear to possess a photographic memory likely do not and are instead employing other memorization techniques... "This book offers a short, spirited defense of rhetoric and the liberal arts as catalysts for precision, invention, and empathy in today's world. The author, a professor of Shakespeare studies at a liberal arts college and a parent of school-age children, argues that high-stakes testing and a culture of assessment have altered how and what

students are taught, as courses across the arts, humanities, and sciences increasingly are set aside to make room for joyless, mechanical reading and math instruction. Students have been robbed of a complete education, their imaginations stunted by this myopic focus on bare literacy and numeracy. Education is about thinking, Newstok argues, rather than the mastery of a set of rigidly defined skills, and the seemingly rigid pedagogy of the English Renaissance produced some of the most compelling and

influential examples of liberated thinking. Each of the fourteen chapters explores an essential element of Shakespeare's world and work, aligns it with the ideas of other thinkers and writers in modern times, and suggests opportunities for further reading. Chapters on craft, technology, attention, freedom, and related topics combine past and present ideas about education to build a case for the value of the past, the pleasure of thinking, and the limitations of modern educational practices and prejudices"--
