"...a must-read text that provides a historical lens to see how ubicomp has matured into a multidisciplinary endeavor. It will be an essential reference to researchers and those who want to learn more about this evolving field." -From the Foreword, Professor Gregory D. Abowd, Georgia Institute of Technology First introduced two decades ago, the term ubiquitous computing is now part of the common vernacular. Ubicomp, as it is commonly called, has grown not just quickly but broadly so as to encompass a wealth of concepts and technology that serves any number of purposes across all of human endeavor. While such growth is positive, the newest generation of ubicomp practitioners and researchers, isolated to specific tasks, are in danger of losing their sense of history and the broader perspective that has been so essential to the field's creativity and brilliance. Under the guidance of John Krumm, an original ubicomp pioneer, Ubiquitous Computing Fundamentals brings together eleven ubiquitous computing trailblazers who each report on his or her area of expertise. Starting with a historical introduction, the book moves on to summarize a number of self-contained topics. Taking a decidedly human perspective, the book includes discussion on how to observe people in their natural environments and evaluate the critical points where ubiquitous computing technologies can improve their lives. Among a range of topics this book examines: How to build an infrastructure that supports ubiquitous computing applications Privacy protection in systems that connect personal devices and personal information Moving from the graphical to the ubiquitous computing user interface Techniques that are revolutionizing the way we determine a person's location and understand other sensor measurements While we needn't become expert in every sub-discipline of ubicomp, it is necessary that we appreciate all the perspectives that make up the field and understand how our work can influence and be influenced by those perspectives. This is important, if we are to encourage future generations to be as successfully innovative as the field's originators.

The field of DNA vaccines has undergone explosive growth in the last few years. As usual, some historical precursors of this approach can be discerned in the scientific literature of the last decades. However, the present state of affairs appears to date from observations made discreetly in 1988 by Wolff, Malone, Felgner, and colleagues, which were described in a 1989 patent and published in 1990. Quite surprisingly, they showed that genes carried by pure plasmid DNA and injected in a saline solution, hence the epithet "naked DNA," could be taken up and expressed by skeletal muscle cells with a low but reproducible frequency. Such a simple methodology was sure to spawn many applications. In a separate and important line of experimentation, Tang, De Vit, and Johnston announced in 1992 that it was indeed possible to obtain humoral immune responses against proteins encoded by DNA delivered to the skin by a biolistic device, which has colloquially become known as the "gene gun." The year 1993 saw the publication of further improvements in the methods of naked DNA delivery and, above all, the first demonstrations by several groups of the induction of humoral and cytotoxic immune responses to viral antigens expressed from injected plasmid DNA. In some cases, protection against challenge with the pathogen was obtained. The latter result was - questionably the touchstone of a method of vaccination worthy of the name. *Robert Lachmann's Letters to Henry George Farmer (from 1923 to 1938)* Getty Publications This book provides a compelling overall update on current status of RNA interference *High Performance Computing in Science and Engineering '14* Harvard University Press This unique book is the first comprehensive introduction to Marxist approaches to art history. Although the aesthetic was a crucial part of Marx and Engels's thought, they left no full statement

on the arts. Although there is an abundant scholarship on Marxist approaches to literature, the historiography of the visual arts has been largely neglected. This book encompasses a range of influential thinkers and historians including William Morris, Mikhail Lifshits, Frederick Antal, Francis Klingender, Max Raphael, Meyer Schapiro, Walter Benjamin, Henri Lefebvre and Arnold Hauser. It also addresses the heritage of the New Left. In the spirit of Marxism, the authors interpret the achievements and limitations of Marxist art history in relation to the historical and political circumstances of its production, providing an indispensable introduction to contemporary radical practices in the field.

Therapeutic Oligonucleotides Hackett Publishing

State-of-the-art review on atopic eczema, one of the most common skin diseases today. This multi-authored handbook covers all aspects relevant for physicians from various disciplines.

Our understanding of inflammation has increased rapidly in recent years, due in large part to the impact of molecular biology and gene identification and cloning. This book brings together ideas from a number of different biochemical disciplines which are frequently not integrated. The first chapter gives a visual overview of the subject; the remaining chapters are organized into three themes: the effector molecules, the regulatory components and the processes of inflammation itself. This book is essential reading for the busy physician or pathologist who wants to be up-to-date with the latest developments in immunology as they affect the diagnosis and treatment of many conditions.

Robert G. Moeller is the first historian of modern German women to use social policy as a lens to focus on society's conceptions of gender difference and "woman's place." He investigates the social, economic, and political status of women in West Germany after World War II to reveal how the West Germans, emerging from the rubble of the Third Reich, viewed a reconsideration of gender relations as an essential part of social reconstruction. The debate over "woman's place" in the fifties was part of West Germany's confrontation with the ideological legacy of National Socialism. At the same time, the presence of the Cold War influenced all debates about women and the family. In response to the "woman question," West Germans defined the boundaries not only between women and men, but also between East and West. Moeller's study shows that public policy is a crucial arena where women's needs, capacities, and possibilities are discussed, identified, defined, and reinforced. Nowhere more explicitly than in the first decade of West Germany's history did, in Joan Scott's words, "politics construct gender and gender construct politics." This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1993.

Die Entwicklung der Landschaftsschau in der englischen Reiseliteratur BoD - Books on Demand With Building in France, Building in Iron, Building in Ferroconcrete (1928)—published now for the first time in English—Sigfried Giedion positioned himself as an eloquent advocate of modern architecture. This was the first book to exalt Le Corbusier as the artistic champion of the new movement. It also spelled out many of the tenets of Modernism that are now regarded as myths, among them the impoverishment of nineteenth-century architectural thinking and practice, the contrasting vigor of engineering innovations, and the notion of Modernism as technologically preordained.

The revival of interest in collective cultural memories since the 1980s has been a genuinely global phenomenon. Cultural memories can be defined as the social constructions of the past that allow

individuals and groups to orient themselves in time and space. The investigation of cultural memories has necessitated an interdisciplinary perspective, though geographical questions about the spaces, places, and landscapes of memory have acquired a special significance. The essays in this volume, written by leading anthropologists, geographers, historians, and psychologists, open a range of new interpretations of the formation and development of cultural memories from ancient times to the present day. The volume is divided into five interconnected sections. The first section outlines the theoretical considerations that have shaped recent debates about cultural memory. The second section provides detailed case studies of three key themes: the founding myths of the nation-state, the contestation of national collective memories during periods of civil war, and the oral traditions that move beyond national narrative. The third section examines the role of World War II as a pivotal episode in an emerging European cultural memory. The fourth section focuses on cultural memories in postcolonial contexts beyond Europe. The fifth and final section extends the study of cultural memory back into premodern tribal and nomadic societies.

In *Socialism of Fools*, Michele Battini focuses on the critical moment during the Enlightenment in which anti-Jewish stereotypes morphed into a sophisticated, modern social anti-Semitism. He recovers the potent anti-Jewish, anticapitalist propaganda that cemented the idea of a Jewish conspiracy in the European mind and connects it to the atrocities that characterized the Jewish experience in the nineteenth and twentieth centuries. Beginning in the eighteenth century, counter-Enlightenment intellectuals and intransigent Catholic writers singled out Jews for conspiring to exploit self-sustaining markets and the liberal state. These ideas spread among socialist and labor movements in the nineteenth century and intensified during the Long Depression of the 1870s. Anti-Jewish anticapitalism then migrated to the Habsburg Empire with the Christian Social Party; to Germany with the Anti-Semitic Leagues; to France with the nationalist movements; and to Italy, where Revolutionary Syndicalists made anti-Jewish anticapitalism the basis of an alliance with the nationalists. Exemplified best in the Protocols of the Elders of Zion, the infamous document that "leaked" Jewish plans to conquer the world, the Jewish-conspiracy myth inverts reality and creates a perverse relationship to historical and judicial truth. Isolating the intellectual roots of this phenomenon and its contemporary resonances, Battini shows us why, so many decades after the Holocaust, Jewish people continue to be a powerful political target.

Protecting Motherhood Springer Science & Business Media

This text explores, in both historical and critical contexts, the evolution of folk tales and fairy tales, their influence on popular beliefs, the politics behind them and their incorporation in mass media culture today. It focuses particularly on socio-historical forces which have changed the function of fairy tales since the 1700s.

Complex Systems Science in Biomedicine Pluto Press

This is the first work to focus on microbes in gut systems of soil animals. Beginning with an overview of the biology of soil invertebrates, the text turns to the gut microbiota of termites, which are important soil processors in tropical and subtropical regions. Coverage extends to intestinal microbiota of such other litter decomposers as earthworms, springtails, millipedes, and woodlice. Thoroughly illustrated, including color photographs.

Clostridia have a high biotechnological potential, although they are generally still regarded more as a group of pathogenic microorganisms. They undertake a broad variety of biocatalytic reactions

some of which are unique and of use in the chemical and biotechnology industry for the production of chemicals or for biopharmaceutical purposes. Even some of the clostridial toxins are of medical relevance and can be used as therapeutic agents; The book presents the biology, physiology, and genetics, including genome projects of Clostridia and highlights their potential for industrial and medical applications. It is mostly based on research during the last decade which has brought significant progress in the field and outlines future perspectives of industrial interest.

Sustainable Degradation of Lignocellulosic Biomass CRC Press

Designed as an advanced survey of the field, this book describes the key research parameters of nanocarrier technologies. It is the first book with this topic. It comprises a collection of scientific articles from top research people in the field and provides an up-to-date source containing recent citation and bibliography. The book is an indispensable source of information for new researchers and scientists.

"The Differential Diagnosis of Chorea provides a comprehensive account of the various neurological conditions, both genetic and acquired, that lead to this involuntary movement disorder.

Traumatic Brain and Spinal Cord Injury Springer Science & Business Media

The product of perhaps the most important research meeting in the field, this essential text outlines all the latest research in retinal degeneration. Culled from the proceedings of the International Symposium on the subject, the topics in this volume explore the etiology, cellular mechanisms, epidemiology, models and potential therapeutic measures for the blinding diseases of retinitis pigmentosa and age-related macular degeneration. A must-read for researchers in the field.

"Robert Lachmann's letters to Henry George Farmer, from the years 1923-38, provide insightful glimpses into his life and his progressive research projects. From an historical perspective, they offer critical data concerning the development of comparative musicology as it evolved in Germany during the early decades of the twentieth century. The fact that Lachmann sought contact with Farmer can be explained from their mutual, yet diverse interests in Arab music, particularly as they were then considered to be the foremost European scholars in the field. During the 1932 Cairo International Congress on Arab Music, they were selected as presidents of their respective committees"--

The Mass Ornament today remains a refreshing tribute to popular culture, and its impressively interdisciplinary writings continue to shed light not only on Kracauer's later work but also on the ideas of the Frankfurt School, the genealogy of film theory and cultural studies, Weimar cultural politics, and, not least, the exigencies of intellectual exile.

Cosmic Rays at Earth Royal Society of Chemistry

Focusing on knowledge, science and literature in early modern Germany, this collection presents 12 essays on emerging epistemologies regarding: the transcendent nature of the Divine; the natural world; the body; sexuality; intellectual property; aesthetics; demons; and witches.

The first in a series exploring the elements of a national strategy for U.S. foreign policy, this book examines the most critical decisions likely to face the next president. The book covers global and regional issues and spotlights the long-term policy issues and organizational, financial, and diplomatic challenges that will confront senior U.S. officials in 2017 and beyond.
