Inside Graduate Admissions

Routledge

Economic, academic, and social forces are causing undergraduate schools to start a fresh examination of teaching effectiveness. Administrators face the complex task of developing equitable, predictable ways to evaluate, encourage, and reward good teaching in science, math, engineering, and technology. *Evaluating, and Improving Undergraduate Teaching in Science, Technology, Engineering, and Mathematics* offers a vision for systematic evaluation of teaching practices and academic programs, with recommendations to the various stakeholders in higher education about how to achieve change. What is good undergraduate teaching? This book discusses how to evaluate undergraduate teaching of science, mathematics, engineering, and technology and what characterizes effective teaching in these fields. Why has it been difficult for colleges and universities to address the question of teaching effectiveness? The committee explores the implications of differences between the research and teaching

cultures--and how practices in rewarding researchers could be transferred to the teaching enterprise. How should administrators approach the evaluation of individual faculty members? And how should evaluation results be used? The committee discusses methodologies, offers practical guidelines, and points out pitfalls. *Evaluating, and Improving Undergraduate Teaching in Science, Technology, Engineering, and Mathematics* provides a blueprint for institutions ready to build effective evaluation programs for teaching in science fields.

The Professor Is In Guilford Publications
The definitive career guide for grad

students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job. Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site *The Professor is In*, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: - When, where, and what to publish - Writing a foolproof grant application - Cultivating references and crafting the perfect CV - Acing the job talk and campus interview - Avoiding the adjunct

trap - Making the leap to nonacademic work, when the time is right. *The Professor is In* addresses all of these issues, and many more.

Graduate Admissions Essays Final Draft!

Named one of *Vulture's* Top 10 Best Books of 2020! Leftist firebrand Fredrik deBoer exposes the lie at the heart of our educational system and demands top-to-bottom reform. Everyone agrees that education is the key to creating a more just and equal world, and that our schools are broken and failing. Proposed reforms variously target incompetent teachers, corrupt union practices, or outdated curricula, but no one acknowledges a scientifically-proven fact that we all understand intuitively: Academic potential varies between individuals, and cannot be dramatically improved. In *The Cult of Smart*, educator and outspoken leftist Fredrik deBoer exposes this omission as the central flaw of our entire society, which has created and perpetuated an unjust class structure based on intellectual ability. Since cognitive talent varies from person to person, our education system can never create equal opportunity for all. Instead, it teaches our children that hierarchy and competition are natural, and that human value should be based on intelligence. These ideas are counter to everything that the left believes, but until they acknowledge the existence of individual cognitive differences, progressives remain complicit in keeping the status quo in place. This passionate, voice-driven manifesto demands that we embrace a new goal for education: equality of outcomes. We must create a world that has a place for everyone, not just the academically talented. But we'll never achieve this dream until the *Cult of Smart* is destroyed.

Beginnings and Endings in the Psychology Major Sourcebooks, Inc. How does graduate admissions work? Who does the system work for, and who falls through its cracks? More people than ever seek graduate degrees, but little has been written about who gets in and why. Drawing on firsthand observations of admission committees and interviews with faculty in 10 top-ranked doctoral programs in the humanities, social sciences, and natural sciences, education professor Julie Posselt pulls back the curtain on a process usually conducted in secret. "Politicians, judges, journalists, parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny, with much public debate over appropriate criteria. But the question of who gets into Ph.D. programs has by comparison escaped much discussion. That may change with the publication of *Inside Graduate Admissions*...While the departments reviewed in the book remain secret, the general process used by elite departments would now appear to be more open as a result of Posselt's book." —Scott Jaschik, *Inside Higher Ed*

A BEST BOOK OF THE YEAR: NPR and Boston Globe Finally a novel that puts the "pissed" back into "epistolary." Jason

Fitger is a beleaguered professor of creative writing and literature at Payne University, a small and not very distinguished liberal arts college in the midwest. His department is facing draconian cuts and squalid quarters, while one floor above them the Economics Department is getting lavishly remodeled offices. His once-promising writing career is in the doldrums, as is his romantic life, in part as the result of his unwise use of his private affairs for his novels. His star (he thinks) student can't catch a break with his brilliant (he thinks) work *Accountant in a Bordello*, based on Melville's *Bartleby*. In short, his life is a tale of woe, and the vehicle this droll and inventive novel uses to tell that tale is a series of hilarious letters of recommendation that Fitger is endlessly called upon by his students and colleagues to produce, each one of which is a small masterpiece of high dudgeon, low spirits, and passive-aggressive strategies. We recommend Dear Committee Members to you in the strongest possible terms. Don't miss Julie Schumacher's new novel, *The English Experience*, coming soon.

and means to follow for knowledge management implementation, especially for organizations with multiple business verticals to follow. The book underlines that knowledge is both an entity and organizational asset which can be managed. A holistic view of knowledge management implementation has been provided. It also emphasizes the phenomenological importance of human resource parameters as compared to that of technological parameters. Various hypotheses have been tested to validate the significant models hypothesized. This work will prove useful to corporations, researchers, and independent professionals working to study or implement knowledge management paradigms.
