*The Gold-mines of Midian and the Ruined Midianite Cities* National Geographic Books

For two hundred years the pessimists have dominated public discourse, insisting that things will soon be getting much worse. But in fact, life is getting better—and at an accelerating rate. Food availability, income, and life span are up; disease, child mortality, and violence are down all across the globe. Africa is following Asia out of poverty; the Internet, the mobile phone, and container shipping are enriching people's lives as never before. In his bold and bracing exploration into how human culture evolves positively through exchange and specialization, bestselling author Matt Ridley does more than describe how things are getting better. He explains why. An astute, refreshing, and revelatory work that covers the entire sweep of human history—from the Stone Age to the Internet—*The Rational Optimist* will change your way of thinking about the world for the better.

*The Tradition of Science* Getty Publications

Bibliography of published literature on Egypt from the earliest times to 1918. ...will provide scholars, armchair travelers, and future visitors to the region with a well-organized source list and miniature travel history. --ARBA

*The Alpine Journal* Columbia University Press

Religious ignorance is as dangerous for societal stability as religious extremism. In *The Great Leap-Fraud*, author A. J. Deus shows that only through the cowardly behavior of a majority that is uneducated in religious questions can sectarian extremism and terrorism take shape and overtake societies. Modern civilizations fail to address the dangerous defect. Based on a reassessment of primary documents from the beginning of Judaism through to the Reformation, *The Great Leap-Fraud* evaluates the Judaic scriptures of the Jews, the Christians, and the Muslims for their potential to stir hatred, violence, and terrorism. It searches for messages in the scriptures that may alter the economic behavior of societies. While providing an overview of three major religions—Judaism, Christianity, and Islam—*The Great Leap-Fraud* uncovers a series of frauds and premeditated deployment of prophets with the goal to establish or redeem the Jewish state of Israel. It also uncovers how the vested interest of Christian historians has pushed the rise of Christianity unto Roman Emperors. Deus shows that the way humans think and act are strongly influenced by a culture driven by the norms of religious organizations, both past and present. This joint venture between ICOMOS, the advisory body to UNESCO on cultural sites, and the International Astronomical Union is the second volume in an ongoing exploration of themes and issues relating to astronomical heritage in particular and to science and technology heritage in general. It examines a number of key questions relating to astronomical heritage sites and their potential recognition as World Heritage, attempting to identify what might constitute "outstanding universal value" in relation to astronomy. "Heritage Sites of Astronomy and Archaeoastronomy--Volume 2" represents the culmination of several years' work to address some of the most challenging issues raised in the first ICOMOS-IAU Thematic Study, published in 2010. These include the recognition and preservation of the value of dark skies at both cultural and natural sites and landscapes; balancing archaeoastronomical considerations in the context of broader archaeological and cultural values; the potential for serial nominations; and management issues such as preserving the integrity of astronomical sightlines through the landscape. Its case studies are developed in greater depth than those in volume 1, and generally structured as segments of draft nomination dossiers. They include seven-stone antas (prehistoric dolmens) in Portugal and Spain, the thirteen towers of Chankillo in Peru, the astronomical timing of irrigation in Oman, Pic du Midi de Bigorre Observatory in France, Baikonur Cosmodrome in Kazakhstan, and Aoraki-Mackenzie International Dark Sky Reserve in New Zealand. A case study on Stonehenge, already a World Heritage Site, focuses on preserving the integrity of the solstitial sightlines. As for the first ICOMOS-IAU Thematic Study, an international team of authors including historians, astronomers and heritage professionals is led by Professor Clive Ruggles for the IAU and Professor Michel Cotte for ICOMOS.

Winner of the 2015 Abbott Lowell Cummings prize from the Vernacular Architecture Forum Winner of the 2015 Sprig Kostof Book Award from the Society of Architectural Historians Winner of the 2016 International Planning History Society Book Prize for European Planning History Honorable Mention: 2016 Wylie Prize in French Studies In the three decades following World War II, the French government engaged in one of the twentieth century's greatest social and architectural experiments: transforming a mostly rural country into a modernized urban nation. Through the state-sanctioned construction of mass housing and development of towns on the outskirts of existing cities, a new world materialized where sixty years ago little more than cabbage and cottages existed. Known as the banlieue, the suburban landscapes that make up much of contemporary France are near-opposites of the historic cities they surround. Although these postwar environments of towers, slabs, and megastructures are

often seen as a single utopian blueprint gone awry, Kenny Cupers demonstrates that their construction was instead driven by the intense aspirations and anxieties of a broad range of people. Narrating the complex interactions between architects, planners, policy makers, inhabitants, and social scientists, he shows how postwar dwelling was caught between the purview of the welfare state and the rise of mass consumerism. *The Social Project* unearths three decades of architectural and social experiments centered on the dwelling environment as it became an object of modernization, an everyday site of citizen participation, and a domain of social scientific expertise. Beyond state intervention, it was this new regime of knowledge production that made postwar modernism mainstream. The first comprehensive history of these wide-ranging urban projects, this book reveals how housing in postwar France shaped both contemporary urbanity and modern architecture.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

**Brian Eno** Feral House

Any real understanding of where we stand scientifically today and where we are headed depends to a great extent on an awareness of how we reached those scientific achievements. The increased impact of science and technology on our lives makes such an understanding even more important. For this reason, this book is intended to provide information about the major works of science in the collections of the Library of Congress. These selected works are organized here by traditional scientific discipline and are treated in historical and, generally, chronological order. The contents contain chapters on: (1) astronomy; (2) botany; (3) zoology; (4) medicine; (5) chemistry; (6) geology; (7) mathematics; and (8) physics. A bibliography provides information about particular Library of Congress collections to

which a book or manuscript may belong, as well as specific bibliographic information. Title translations are also included. (TW)

**Camus and Sartre** Victoria & Albert Museum

In *Extended Play*, one of the country's most innovative music writers conducts a wide-ranging tour through the outer limits of contemporary music. Over the course of more than twenty-five portraits, interviews, and essays, John Corbett engages artists from lands as distant as Sweden, Siberia, and Saturn. With a special emphasis on African American and European improvisers, the book explores the famous and the little known, from John Cage and George Clinton to Anthony Braxton and Sun Ra. Employing approaches as diverse as the music he celebrates, Corbett illuminates the sound and theory of funk and rap, blues and jazz, contemporary classical, free improvisation, rock, and reggae. Using cultural critique and textual theory, Corbett addresses a broad spectrum of issues, such as the status of recorded music in postmodern culture, the politics of self-censorship, experimentation, and alternativism in the music industry, and the use of metaphors of space and madness in the work of African American musicians. He follows these more theoretically oriented essays with a series of extensive profiles and in-depth interviews that offer contrasting and complementary perspectives on some of the world's most creative musicians and their work. Included here are more than twenty original photographs as well as a meticulously annotated discography. The result is one of the most thoughtful, and most entertaining, investigations of contemporary music available today.

A history of mapmaking spans the period of time from when maps were made on clay tablets, to the present, when satellites chart the planets

*Beneath the Dust of Time* University of Chicago Press

"This book was published to coincide with the exhibition *Diaghilev and the Golden Age of the Ballet Russes 1909-1929* at the Victoria and Albert Museum, London, 25 September 2010-9 January 2011"--Title page verso.

**The Thesaurus of Slang** Checkmark Books

Renowned philosopher and cultural theorist Kristeva (*Powers of Horror: An Essay on Abjection*) offers an extended consideration of artistic figurations of the severed head, the organizing theme to an exhibition she coordinated at the Louvre in 1998. Though she follows a single historical trajectory, moving from Paleolithic skull cults to antique Greek sculpture to the Surrealist drawings, Kristeva eschews the disciplinary constraints of art history, instead employing psychoanalysis to explore the intertwined problems of representation and mortality posed by the severed head. For Kristeva, the capacity to figure the life of the mind first requires a confrontation with this horrific object that stands at the boundary between life and death, registering not only the loss of corporeal form but also subjective interiority. Though this book does not engage with recent images of decapitation, it is not without contemporary political-cultural import; for Kristeva, these cruel artistic figurations offer us the capacity to contemplate the sacred within a technology-driven contemporary visual culture. Verdict While a challenging text, this beautifully written and richly layered meditation on mortality and representation will

undoubtedly appeal to those readers interested in semiotic and psychoanalytically informed readings of art.-Jonathan Patkowski, CUNY Graduate Ctr.(c) Copyright 2012. Library Journals LLC, a wholly owned subsidiary of Media Source, Inc. No redistribution permitted.

**Diaghilev and the Golden Age of the Ballets Russes 1909-1929** Westview Press

*Arabs and Arabists* contains nineteen selected articles by Alastair Hamilton on the Western acquisition of knowledge of the Arab and Ottoman world in the early modern period. The first essays are on Arabs who visited Europe and gave instruction to Western Arabists, and on Europeans who either visited the Arab (or the Ottoman) world in search of manuscripts and information or who, like Franciscus Raphelengius, Isaac Casaubon and Adriaen Reland, studied it at a distance and remained in the West. These are followed by a section on the actual study of the Arabic language in Europe, and above all the creation of the first Arabic-Latin dictionaries, and another on the European study of Islam and Western translations of the Qur'an.

**Buyology** Wentworth Press

Musician, composer, producer: Brian Eno is unique in contemporary music. Best known in recent years for producing U2's sensational albums, Eno began his career as a synthesizer player for Roxy Music. He has since released many solo albums, both rock and ambient, written music for film and television soundtracks, and collaborated with David Bowie, David Byrne, Robert Fripp, and classical and experimental composers. His pioneering ambient sound has been enormously influential, and without him today's rock would have a decidedly different sound. Drawing on Eno's own words to examine his influences and ideas, this book—featuring a new afterword and an updated discography and bibliography—will long remain provocative and definitive.

**Arabs and Arabists** Adventures Unlimited Press

The first edition of this book was written six years ago. Since then, there have been some significant developments in the area of car audio (and video). In addition, many of the products featured in the first edition are now obsolete. While the first edition of the book continues to sell, we have seen a bit of a slow-down at major accounts. This edition promises to be even more successful than the last. Car Stereo Cookbook, 2e is a completely revamped edition of a hugely successful title that continues to sell. This revised book will include new information on mobile video, satellite radio, mp3, wma, digital broadcast radio, and will eliminate the out-of-date products that are no longer pertinent.

**Backpacker** Prentice Hall

7 Ways to reinvent your favorite ingredients with more than 120 new, exciting and tasty recipes Naked Chef television personality Jamie Oliver has looked at the top ingredients we buy week in, week out. We're talking about those meal staples we pick up without thinking - chicken breasts, salmon fillets, ground beef, eggs, potatoes, broccoli, mushrooms, to name but a few. We're all busy, but that shouldn't stop us from having a tasty, nutritious meal after a long day at work or looking after the kids. So, rather than trying to change what we buy, Jamie wants to give everyone new inspiration for their favorite supermarket ingredients. Jamie will share 7 achievable, exciting and tasty ways to cook 18 of our favorite ingredients, and each recipe will include no more than 8 ingredients. Across the book, at least 70% of the recipes will be everyday options from both an ease and nutritional point of view, meaning you're covered for every day of the week. With

everything from fakeaways and traybakes to family and freezer favorites, you'll find bags of inspiration to help you mix things up in the kitchen. Step up, 7 Ways, the most reader-focused cookbook Jamie has ever written.

*The Mapmakers* Vintage

NEW YORK TIMES BESTSELLER • "A fascinating look at how consumers perceive logos, ads, commercials, brands, and products."—Time How much do we know about why we buy? What truly influences our decisions in today's message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can "cool" brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

*Manuel du pilote de la mer Méditerranée rédigé par L. S. Baudin* BRILL

This volume presents the latest research findings in molecular plant-microbe interactions, based on presentations of leading international scientists at the Sixth International Symposium on this subject. From these presentations it is clear that the field has made enormous advances in the past several years. In addition to the text on plant-microbe interactions, a number of experts in fields peripherally related to the main subject of the symposium also participated, and these individuals have also contributed to the present volume. This published material is very up-to-date, representing the cutting edge of current research. For anyone interested in learning of the latest advanced in this rapidly moving field, this volume is required reading.

Study of the educational system of zaire - gives historical background structure before and since deconolization, covers primary education, secondary education, university education, training programmes, teacher training and technical education, financing, administrative aspects, etc., and includes comments on relevant legislation. Statistical tables and references.

**Heritage Sites of Astronomy and Archaeoastronomy in the Context of the UNESCO World Heritage Convention** University of California Press

Hapgood utilizes ancient maps as concrete evidence of an advanced worldwide civilization existing many thousands of years before ancient Egypt. Hapgood concluded that these ancient mapmakers were in some ways much more advanced in mapmaking than any people prior to the 18th century. Hapgood believes that they mapped all the continents. This would mean that the Americas were mapped thousands of years before Columbus. Antarctica would have been mapped when its coasts were free of ice. Hapgood supposes that there is evidence that these people must have lived when the Ice Age had not yet ended in the Northern Hemisphere and when Alaska was still connected with Siberia by the Pleistocene, Ice Age 'land bridge'.
