Basic Books

The Fourth Conference on Fibrous Composites in Structural Design was a successor to the First-to-Third Conferences on Fibrous Composites in Flight Vehicle Design sponsored by the Air Force (First and Second Conferences, September 1973 and May 1974) and by NASA (Third Conference, November 1975) which were aimed at focusing national attention on flight vehicle applications of a new class of fiber reinforced materials, the advanced

composites, which afforded weight savings and other advantages which had not been previously available. The Fourth Conference, held at San Diego, California, 14-17 November 1978, was the first of these conferences to be jointly sponsored by the Army, Navy and Air Force together with NASA, as well as being the first to give attention to non-aerospace applications of fiber reinforced composites. While the design technology for aerospace applications has reached a state of relative maturity, other areas of application such as military bridging, flywheel energy storage systems, ship and surface vessel components and ground vehicle components are in an early stage

of development, and it was an important objective to pinpoint where careful attention to structural design was needed in such applications to achieve maximum structural performance payoff together with a high level of reliability and attractive economics.

The Statistical Abstract of the United States, published since 1878, is the standard summary of statistics on the social, political, and economic organization of the United States. It is designed to serve as a convenient volume for statistical reference and as a guide to other statistical publications and sources.

The latter function is served by the introductory text to each section, the source note appearing below each table, and Appendix I, which comprises the Guide to Sources of Statistics, the Guide to State Statistical Abstracts, and the Guide to Foreign Statistical Abstracts.

"Victor Golla has been the leading scholar of California Indian languages for most of his professional life, and this book shows why. His ability to synthesize centuries of fieldwork and writings while bringing forward new ideas and fresh ways of looking at California's famous linguistic diversity will make this the primary text for anyone interested in California languages."--Leanne Hinton, Professor Emerita of Linguistics, University of California, Berkeley and author of *How to Keep Your Language Alive* "This book is a wonderful contribution that only Golla could have written. It is a perfect confluence of author and subject matter."--Ives Goddard, Senior Linguist, Emeritus, Smithsonian Institution "Golla is a gifted polymath and California Indian Languages is certainly his landmark achievement,

required reading for any linguist, archaeologist, ethnographer, or historian interested in aboriginal California."--Robert L. Bettinger, Professor of Anthropology, University of California Davis and author of *Hunter-Gatherer Foraging* "The preeminent figure in his field, Victor Golla has written a masterpiece filled with treasures for every audience: Indian communities working toward cultural and linguistic revival; general readers interested in the many cultures of Native California; and scholars in the fields of language, archaeology, and prehistory. The information here is so detailed that it supersedes all previous reference works."--Andrew Garrett, Professor of Linguistics, University of California Berkeley and Director, Survey of California and Other Indian Languages "This is a truly magnificent work, at once authoritative, comprehensive, accessible to a wide readership, and fascinating. Masterfully integrating linguistic, archaeological, historical, and cultural information, the author describes not just the languages, but also the major figures in the story: speakers, explorers, missionaries, and scholars. It is beautifully written, a great

pleasure to read, and difficult to put down."--Marianne Mithun, author of *The Languages of Native North America*

The Skycrane was the last creation of aircraft design pioneer Igor Sikorsky. In *SKYCRANE: Igor Sikorsky's Last Vision*, former Sikorsky Aircraft Executive Vice President John A. McKenna traces the development of this remarkable helicopter from original concept and early sketches to standout performer for the military and private industry. Responsible for building the first S-64 Skycrane in 1961 and for supporting its Army and commercial programs, McKenna has written a comprehensive history chronicling a radically designed helicopter that many thought would not succeed. Indeed, initial versions generated no orders. But General Harry Kinnards vision and advocacy resulted in the Skycranes support of combat operations in Vietnam as part of the groundbreaking concept of supporting Army troops with helicopters rather than trucks. In 1971 Erickson Lumber Company acquired the first Skycrane intended for commercial use to move timber deep in

American forests. Owner Jack Erickson later acquired the world manufacturing and support rights to the aircraft creating Erickson Air-Crane Inc. A half century after its first flight the Skycrane continues to save lives, provide essential services, and earn daily profits worldwide. Beautifully illustrated with scores of historical photographs, SKYCRANE features interviews with engineers who designed and tested the helicopter and with Army pilots who flew it during combat in Vietnam. This engagingly written work is the definitive history of a unique and important aircraft.

Tax Planning for Farm and Land Diversification has been written to offer practical help and guidance to ensure that tax planning opportunities are used to their maximum, helping farmers and landowners through this often complicated process. It is a pragmatic and strategic guide, written in an accessible and user-friendly style. With the 2005 deadline for applying international accounting standards approaching the question of valuing agricultural stocks is becoming more important. This new edition provides valuable guidance on the tax consequences of pursuing alternative types of farming and land use rather than traditional methods. There are many tax issues relating to the diversification of

farmland and this book is a guide to the tax benefits and pitfalls the farmer is exposed to. LexisNexis UK and CIMA Publishing are offering CIMA members a discount on this product. Hypoxia in the Northern Gulf of Mexico  
Routledge

Since 1985, scientists have been documenting a hypoxic zone in the Gulf of Mexico each year. The hypoxic zone, an area of low dissolved oxygen that cannot support marine life, generally manifests itself in the spring. Since marine species either die or flee the hypoxic zone, the spread of hypoxia reduces the available habitat for marine species, which are important for the ecosystem as well as

commercial and recreational fishing in the Gulf. Since 2001, the hypoxic zone has averaged 211,650 km during its peak summer months, an area slightly larger than the state of Connecticut, and ranged from a low of 8,500 km to a high of 22,000 km. To address the hypoxia problem, the Mississippi River/Gulf of Mexico Watershed Nutrient Task Force (or Task Force) was formed to bring together representatives from federal agencies, states, and tribes to consider options for responding to hypoxia. The Task Force asked the White House Office of Science and Technology Policy to conduct a scientific assessment of the causes and consequences of Gulf hypoxia through its Committee on Environment and Natural Resources (CENR).

With a new afterword by the author, this classic analysis of Western liberal capitalist society contends that capitalism—and the culture it creates—harbors the seeds of its own downfall by creating a need among successful people for personal gratification—a need that corrodes the

work ethic that led to their success in the first place. With the end of the Cold War and the emergence of a new world order, this provocative manifesto is more relevant than ever.

"Williams had deep roots in Sussex County, the most southern, most rural, and most socially conservative part of Delaware. The book examines Williams's involvement in the country's poultry industry from its beginnings during the 1920s through the turbulent World War II years when Sussex poultry producers tangled with federal government officials from the Office of Price Administration and the U.S. Army. The war years coincided with the maturation of poultry production in Sussex that brought the county's people into more complex and wide-ranging economic, social, and political interactions. It was in reaction to these events that John Williams decided to run for the U.S. Senate."--BOOK JACKET.

**Colonial Encounters** W.H. Freeman Design and Analysis of Composite Structures enables graduate students and engineers to generate meaningful and robust designs of complex composite structures. Combining analysis and design methods for structural components, the book begins with simple topics such as skins and stiffeners and progresses through to entire components of fuselages and wings. Starting with basic mathematical derivation followed by simplifications used in real-world design, Design and Analysis of Composite Structures presents the level of accuracy

and range of applicability of each method. Examples taken from actual applications are worked out in detail to show how the concepts are applied, solving the same design problem with different methods based on different drivers (e.g. cost or weight) to show how the final configuration changes as the requirements and approach change. Provides a toolkit of analysis and design methods to most situations encountered in practice, as well as analytical frameworks and the means to solving them for tackling less frequent problems. Presents solutions applicable to optimization schemes without having to run finite element models at each

iteration, speeding up the design process and allowing examination of several more alternatives than traditional approaches. Includes guidelines showing how decisions based on manufacturing considerations affect weight and how weight optimization may adversely affect the cost. Accompanied by a website at [www.wiley.com/go/kassapoglou](http://www.wiley.com/go/kassapoglou) hosting lecture slides and solutions to the exercises for instructors.
