Framed by an overview of theories that guide student affairs practice, the cases in this book present a challenging array of problems that student affairs and higher education personnel face, such as racial diversity, alcohol abuse, and student activism. The revised edition has thirty new cases, with content on issues that reflect the complexity of today's environment at colleges and universities, including the expanded use of social networking, the rise in mental health issues, bullying, study abroad, and athletics. The fully updated edition includes new references, expanded theory with an increased emphasis on race, ethnicity, and sexual orientation, and three entirely new chapters on admissions, student identity, and campus life. An excellent teaching tool, this book challenges students to consider multiple overlapping issues within a single case study. Features include: A two-part structure that sets the stage for case study methods and links student affairs theory with practical applications Cases written by well-known and respected contributors set in a wide variety of institution types and locations Over 35 complex case studies reflecting the multifaceted issues student affairs professionals face in today's college environment.

Lack of clean water, inadequate sanitation, and insufficient infection prevention and control promote the spread of parasites. The discovery of antiparasitic drugs was considered a milestone in the veterinary and medical sciences, but their use has subsequently become limited due to the emergence of resistance. While plenty of attention has been given in human and animal health communities to the global threat of antimicrobial drug resistance, specific antiparasitic advice is less available. This book provides an in-depth view of the issue for parasitologists, pharmacologists and veterinary scientists. Specifically discussing antiparasitic drug resistance mechanisms and factors responsible for the problem.
