Completely revised
text focuses on use of
spectral methods to
solve boundary value,
eigenvalue, and time-
dependent problems,
but also covers
Hermite, Laguerre,

rational Chebyshev, sinc, and spherical harmonic functions, as well as cardinal functions, linear eigenvalue problems, matrix-solving methods, coordinate transformations, methods for unbounded intervals, spherical and cylindrical geometry, and much more. 7 Appendices. Glossary. Bibliography. Index. Over 160 text figures. *Messianisme* Courier Corporation

This first volume, a three-part introduction to the subject, is intended for students with a beginning knowledge of mathematical analysis who are motivated to discover the ideas that shape Fourier analysis. It begins with the simple conviction that Fourier arrived at in

the early nineteenth century when studying problems in the physical sciences--that an arbitrary function can be written as an infinite sum of the most basic trigonometric functions. The first part implements this idea in terms of notions of convergence and summability of Fourier series, while highlighting applications such as the isoperimetric inequality and equidistribution. The second part deals with the Fourier transform and its applications to classical partial differential equations and the Radon transform; a clear introduction to the subject serves to avoid technical difficulties. The book closes with Fourier theory for finite

abelian groups, which is applied to prime numbers in arithmetic progression. In organizing their exposition, the authors have carefully balanced an emphasis on key conceptual insights against the need to provide the technical underpinnings of rigorous analysis. Students of mathematics, physics, engineering and other sciences will find the theory and applications covered in this volume to be of real interest. The Princeton Lectures in Analysis represents a sustained effort to introduce the core areas of mathematical analysis while also illustrating the organic unity between them. Numerous examples and applications throughout its four

planned volumes, of which Fourier Analysis is the first, highlight the far-reaching consequences of certain ideas in analysis to other fields of mathematics and a variety of sciences. Stein and Shakarchi move from an introduction addressing Fourier series and integrals to in-depth considerations of complex analysis; measure and integration theory, and Hilbert spaces; and, finally, further topics such as functional analysis, distributions and elements of probability theory. Revue socialiste In Consuming Painting, Allison Deutsch challenges the pervasive view that Impressionism was above all about visual experience. Focusing

on the language of food and consumption as they were used by such prominent critics as Baudelaire and Zola, she writes new histories for familiar works by Manet, Monet, Caillebotte, and Pissarro and creates fresh possibilities for experiencing and interpreting them. Examining the culinary metaphors that the most influential critics used to express their attraction or disgust toward painting, Deutsch rethinks French modern-life painting in relation to the visceral reactions that these works evoked in their earliest publics. Writers posed viewing as analogous to ingestion and used comparisons to food to describe the appearance of paint and the painter's

process. The food metaphors they chose were aligned with specific female types, such as red meat for sexualized female flesh, confections for fashionably made-up women, and hearty vegetables for agricultural laborers. These culinary figures of speech, Deutsch argues, provide important insights into both the fabrication of the feminine and the construction of masculinity in nineteenth-century France. Consuming Painting exposes the social politics at stake in the deeply gendered metaphors of sense and sensation. Original and convincing, Consuming Painting upends traditional narratives of the sensory reception of modern painting. This

trailblazing book is essential reading for specialists in nineteenth-century art and criticism, gender studies, and modernism.
