Porsche Boxster and Cayman follows the design and development of this mid-engined sports car and coupe family, from their origins in the company's concerted racing activities in the 1950s and 1960s, to the drawing board, launch and systematic evolution through successive model ranges from 1996 to 2016. There are detailed profiles and evaluation of all Boxster and Cayman

derivatives, including 986, 987, 981 and 718. Specifications of the various models are given including entry-level, S, GTS and GT-4. The special Limited Editions, such as the 550 Spyder 40th Anniversary models are also included. The book covers some of the author's international driving experiences at the wheel of Boxster and Cayman including the Bilster Berg race circuit and Tour Auto. There is also an intriguing interview with successful racer Rebecca Jackson, who describes the techniques of Boxster racing and demonstrates the versatility of this best-handling of all Porsche sports cars and an interview with Porsche design chief Harm Lagaaaj. The book will be of great interest to all motoring enthusiasts and historians and is illustrated with 400 colour photographs,

many specially commissioned.

Between 1999 and 2000, the National Transportation Safety Board investigated nine rear-end collisions in which 20 people died and 181 were injured. Common to all nine accidents was the rear following vehicle driver's degraded perception of traffic conditions ahead. As the Safety Board reported in 1995 and further discussed at its 1999 public hearing, existing technology in the form of intelligent Transportation Systems can

prevent rear-end collisions. In the nine accidents investigated by the Board, one (and sometimes more) of the available technologies would have helped alert drivers to the vehicles ahead, so that they could slow their vehicles, and would have prevented or mitigated the circumstances of the collisions. The major issue addressed in this Safety Board special investigation report is the prevention of rear-end collisions through the use of Intelligent transportation systems. This report also discusses some of the challenges, including implementation, consumer acceptance, public perception, and training, associated with the deployment of vehicle-and infrastructure-based collision warning systems. As a result of its investigation, the Safety Board issues

recommendations to the U.S. Department of Transportation; the Federal Highway Administration; the National Highway Traffic Safety Administration; truck, motorcoach, and automobile manufacturers; the Intelligent Transportation Society of America; the American Trucking Associations, Inc.; the Owner-Operator Independent Driver Association; and the National Private Truck Council.
