Common Sense Purchasing reveals the real life lessons learned from a

purchasing professional who has seen every purchasing job level from junior buyer to vice president. Purchasing is the art of relationships and trust building that requires deft handling. Dr. Tom DePaoli has led numerous efforts to reengineer purchasing and has successfully negotiated international supply agreements. He provides poignant insights into what really works in purchasing and separates the theory that doesn't work from the practical aspects that were very successful in his career. Dr. Tom uses many of his original

sayings and hard knock lessons to help purchasing professionals get it right. *Operations and Supply Management* Createspace Independent Pub

The Revolt of The Public and the Crisis of

Authority in the New Millennium Pearson UK

The apocalypse wasn't what anyone expected--no rising flood waters, no zombies, no nuclear bombs. Instead, monsters. Their sudden invasion left the world in shatters, and now, decades later, all that's left of human civilization are a few nomadic bands struggling to survive off the land. Askari was born to this world, and lives, fights, and survives alongside the community that raised her. But when she breaks one too many of the community's rules, her punishment is severe: leave. Armed with her bow and blade, Askari sets off alone, guided only by a map and the promise that if she can find a book hidden in a nearby town, then she can return. But what can one person do alone in such a

harsh, violent landscape? How will she survive? Askari faces a challenge that will force her to learn not only about the world she lives in, but question what she believes about herself.

The world is screaming. Are you listening? Within these pages, you'll find a lot of dark humor--a very valid response to dealing with the grief, confronting the truth, and accepting that the U.S. government won't do enough to help with our irreversible tilting into the dark canyons of the Anthropocene, so we have to pull more than our own weight, do more than our fair share, tell our stories over and over again in the face of corporate, lobbying, ignorant, and misinformed adversity, while bracing

ourselves for the worst to come. You'll even find in these pages some sparks of utter optimism among the grief. But mostly you'll find the horror, the shock, the devastation, the sadness you'd expect from such a heavy topic. There are the reoccurring subjects: fossil fuel overuse, wasted water, sinking backyards, disappearing whales, food shortages, new bacteria, carbon, pipelines, drought, the disproportionately affected based on race, religion, ideology, wealth disparity, circumstances of birth and location. Women talk about not wanting to have kids born into this dying world; immigrants talk about the refugee crises to follow; and everyone rages against the corporations taking advantage of the land's vulnerability in order to turn a

profit. There are the horrifying ladies you know by name: Sandy, Katrina, Irene- and there are the obscurities and anomalies that are slicing us open by a thousand slow cuts. What will surprise you, though, is how much this devastation has caused people to pause and reflect on the absolute beauty of this world, even in its darkest hurricanes of chaos. Featuring 65 pieces of nonfiction, fiction, hybrid, and poetry by 52 authors, this anthology is a document of our times-from the anger and righteousness of those left behind, to the fear for the bleak world we're leaving in the hands of those still to come. It is our hope that this anthology becomes obsolete, but it is our knowledge of a greedy and careless humanity that knows, with sorrow and certainty, that

these pieces will remain timeless. *Superabundance* HarperCollins
The clock is relentlessly ticking! Our world teeters on a knife-edge between a peaceful and prosperous future for all, and a dark winter of death and destruction that threatens to smother the light of civilization. Within 30 years, in the 2030 decade, six powerful 'drivers' will converge with unprecedented force in a statistical spike that could tear humanity apart and plunge the world into a new Dark Age. Depleted fuel supplies, massive population growth, poverty, global climate change, famine, growing water shortages and international lawlessness are on a crash course with potentially catastrophic consequences. In the face of both doomsaying and denial over the state of

our world, Colin Mason cuts through the rhetoric and reams of conflicting data to muster the evidence to illustrate a broad picture of the world as it is, and our possible futures. Ultimately his message is clear; we must act decisively, collectively and immediately to alter the trajectory of humanity away from catastrophe. Offering over 100 priorities for immediate action, *The 2030 Spike* serves as a guidebook for humanity through the treacherous minefields and wastelands ahead to a bright, peaceful and prosperous future in which all humans have the opportunity to thrive and build a better civilization. This book is powerful and essential reading for all people concerned with the future of humanity and planet earth.

Maybe it's the end of the world, but not for Candace Chen, a millennial, first-generation American and office drone meandering her way into adulthood in Ling Ma's offbeat, wryly funny, apocalyptic satire, *Severance*. "A stunning, audacious book with a fresh

take on both office politics and what the apocalypse might bring." —Michael Schaub, NPR.org "A satirical spin on the end times-- kind of like *The Office* meets *The Leftovers*." --Estelle Tang, Elle NAMED A BEST BOOK OF THE YEAR BY: NPR * The New Yorker ("Books We Loved") * Elle * Marie Claire * Amazon Editors * The Paris Review (Staff Favorites) * Refinery29 * Bustle * BuzzFeed * BookPage * Bookish * Mental Floss * Chicago Review of Books * HuffPost * Electric Literature * A.V. Candace Chen, a millennial drone self-sequestered in a Manhattan office tower, is devoted to routine. With the recent passing of her Chinese immigrant parents, she's had her fill of uncertainty. She's content just to carry on: She goes to work, troubleshoots the teen-targeted Gemstone Bible, watches movies in a Greenpoint basement with her boyfriend. So Candace barely notices when a plague of biblical proportions sweeps New York. Then Shen Fever spreads. Families flee. Companies cease operations. The subways screech to a halt. Her bosses enlist her as part of a dwindling skeleton crew with a big end-date payoff. Soon entirely alone, still unfevered, she photographs the eerie, abandoned city as the anonymous

blogger NY Ghost. Candace won't be able to make it on her own forever, though. Enter a group of survivors, led by the power-hungry IT tech Bob. They're traveling to a place called the Facility, where, Bob promises, they will have everything they need to start society anew. But Candace is carrying a secret she knows Bob will exploit. Should she escape from her rescuers? A send-up and takedown of the rituals, routines, and missed opportunities of contemporary life, Ling Ma's *Severance* is a moving family story, a quirky coming-of-adulthood tale, and a hilarious, deadpan satire. Most important, it's a heartfelt tribute to the connections that drive us to do more than survive.

Catastrophic risks are much greater than is commonly appreciated. Collision with an asteroid, runaway global warming, voraciously replicating nanomachines, a pandemic of gene-spliced smallpox launched by bioterrorists, and a world-ending accident in a high-energy particle accelerator, are among the possible extinction events that are sufficiently likely to warrant careful study. How should we respond to events that, for a variety of psychological and cultural reasons, we find it hard to wrap our minds around? Posner argues that realism about science and scientists, innovative applications of cost-benefit analysis, a scientifically literate legal profession, unprecedented international cooperation, and a pragmatic attitude toward civil liberties are among the keys

to coping effectively with the catastrophic risks.

The End of the World is Just the Beginning Haymarket Books

In this "impressive debut" from award-winning speculative fiction author Nalo Hopkinson, a young woman must solve the tragic mystery surrounding her family and bargain with the gods to save her city and herself. (The Washington Post) The rich and privileged have fled the city, barricaded it behind roadblocks, and left it to crumble. The inner city has had to rediscover old ways -- farming, barter, herb lore. But now the monied need a harvest of bodies, and so they prey upon the helpless of the streets. With nowhere to turn, a young woman must open herself to ancient truths, eternal powers, and the tragic mystery

surrounding her mother and grandmother. She must bargain with gods, and give birth to new legends.

Coal Cato Institute

By making available the almost unlimited energy stored in prehistoric plant matter, coal enabled the industrial age – and it still does. Coal today generates more electricity worldwide than any other energy source, helping to drive economic growth in major emerging markets. And yet, continued reliance on this ancient rock carries a high price in smog and greenhouse gases. We use coal because it is cheap: cheap to scrape from the ground, cheap to move, cheap to burn in power plants with inadequate environmental controls. In this book, Mark Thurber explains how coal producers, users, financiers, and

technology exporters drive this supply chain, while fragmented environmental movements battle for full incorporation of environmental costs into the global calculus of coal. Delving into the politics of energy versus the environment at local, national, and international levels, Thurber paints a vivid picture of the multi-faceted challenges associated with continued coal production and use in the twenty-first century.

The Forklifts Have Nothing to Do! John Wiley & Sons

Since prehistory, bunkers have been built as protection from cataclysmic social and environmental forces, and as places of power and transformation. Today, the bunker has become the extreme expression of our greatest fears- from pandemics to climate change

and nuclear war. And once you look, it doesn't take long to start seeing bunkers everywhere. In *Bunker*, acclaimed urban explorer and cultural geographer Bradley Garrett explores the global and rapidly growing movement of 'prepping' for social and environmental collapse, or 'Doomsday'. From the 'dread merchants' hustling safe spaces in the American mid-West to eco-fortresses in Thailand, from geoscrapers to armoured mobile bunkers, *Bunker* is a brilliant, original and never less than deeply disturbing story from the frontlines of the way we live now, an illuminating reflection on our age of disquiet and dread that brings it into new, sharp focus. The bunker, Garrett shows, is all around us, in malls, airports, gated communities, the vehicles we drive. Most of all, he shows,

it's in our minds.

This Plague of Days, Season One: The Siege John Wiley & Sons

A post-apocalyptic thriller of the after effects in the United States after a terrifying terrorist attack using electromagnetic pulse weapons. New York Times best selling author William R. Forstchen now brings us a story which can be all too terrifyingly real...a story in which one man struggles to save his family and his small North Carolina town after America loses a war, in one second, a war that will send America back to the Dark Ages...A war based upon a weapon, an Electro Magnetic Pulse (EMP). A weapon that may already be in the hands of our enemies. Months before publication, *One Second After* has already been cited on the floor of

Congress as a book all Americans should read, a book already being discussed in the corridors of the Pentagon as a truly realistic look at a weapon and its awesome power to destroy the entire United States, literally within one second. It is a weapon that the Wall Street Journal warns could shatter America. In the tradition of On the Beach, Fail Safe and Testament, this book, set in a typical American town, is a dire warning of what might be our future...and our end. After modern science turns every human into a genetic time bomb with men dying at age twenty-five and women dying at age twenty, girls are kidnapped and married off in order to repopulate the world.

White Horse Farrar, Straus and Giroux How we can achieve healthy growth-- more regenerative than destructive, restoring equity rather than exacerbating inequalities. In Tomorrow's Economy, Per Espen Stoknes reframes the hot-button issue of economic growth. Going beyond the usual dialectic of pro-growth versus anti-growth, Stoknes calls for healthy growth. Healthy economic growth is more regenerative than destructive, repairs problems rather than greenwashing them, and restores equity

rather than exacerbating global inequalities. Stoknes--a psychologist, economist, climate strategy researcher, and green-tech entrepreneur--argues that we have the tools to achieve healthy growth, but our success depends on transformations in government practices and individual behavior. Stoknes provides a compass to guide us toward the mindset, mechanisms, and possibilities of healthy growth.

What Has Happened to Fiction in the Age of Platform Capitalism? Since it was first launched in 1994, Amazon has changed the world of literature. The “Everything Store” has not just transformed how we

buy books; it has affected what we buy, and even what we read. In *Everything and Less*, acclaimed critic Mark McGurl explores this new world where writing is no longer categorized as high or lowbrow, literature or popular fiction. Charting a course spanning from Henry James to E. L. James, McGurl shows that contemporary writing has less to do with writing per se than with the manner of its distribution. This consumerist logic—if you like this, you might also like ...—has reorganized the fiction universe so that literary prize-winners sit alongside fantasy, romance, fan fiction, and the infinite list of hybrid genres and self-published works. This is an innovation to be cautiously celebrated. Amazon’s platform is not just a retail juggernaut but an aesthetic experiment driven by

an unseen algorithm rivaling in the depths of its effects any major cultural shift in history. Here all fiction is genre fiction, and the niches range from the categories of crime and science fiction to the more refined interests of Adult Baby Diaper Lover erotica. Everything and Less is a hilarious and insightful map of both the commanding heights and sordid depths of fiction, past and present, that opens up an arresting conversation about why it is we read and write fiction in the first place.

The 2030 Spike Usborne Books

The world has ended, but her journey has just begun. Thirty-year-old Zoe leads an ordinary life until the end of the world arrives. She is cleaning cages and floors at Pope Pharmaceuticals when the president of the United States

announces that human beings are no longer a viable species. When Zoe realizes that everyone she loves is disappearing, she starts running. Scared and alone in a shockingly changed world, she embarks on a remarkable journey of survival and redemption. Along the way, Zoe comes to see that humans are defined not by their genetic code, but rather by their actions and choices. White Horse offers hope for a broken world, where love can lead to the most unexpected places.

Generations of people have been taught that population growth makes resources scarcer. In 2021, for example, one widely publicized report argued that “The world's rapidly growing population

is consuming the planet's natural resources at an alarming rate . . . the world currently needs 1.6 Earths to satisfy the demand for natural resources ... [a figure that] could rise to 2 planets by 2030." But is that true? After analyzing the prices of hundreds of commodities, goods, and services spanning two centuries, Marian Tupy and Gale Pooley found that resources became more abundant as the population grew. That was especially true when they looked at "time prices," which represent the length of time that people must work to buy something. To their surprise, the authors also found that resource abundance increased faster than the population—a relationship that they call superabundance. On average, every

additional human being created more value than he or she consumed. This relationship between population growth and abundance is deeply counterintuitive, yet it is true. Why? More people produce more ideas, which lead to more inventions. People then test those inventions in the marketplace to separate the useful from the useless. At the end of that process of discovery, people are left with innovations that overcome shortages, spur economic growth, and raise standards of living. But large populations are not enough to sustain superabundance—just think of the poverty in China and India before their respective economic reforms. To innovate, people must be allowed to think, speak, publish, associate, and disagree. They must be allowed to save,

invest, trade, and profit. In a word, they must be free.

A New York Times Bestseller! 2019 was the last great year for the world economy. For generations, everything has been getting faster, better, and cheaper. Finally, we reached the point that almost anything you could ever want could be sent to your home within days - even hours - of when you decided you wanted it. America made that happen, but now America has lost interest in keeping it going. Globe-spanning supply chains are only possible with the protection of the U.S. Navy. The American dollar underpins internationalized energy and financial markets. Complex, innovative industries were created to satisfy American consumers. American security policy forced warring nations to lay down their arms. Billions of people have been fed

and educated as the American-led trade system spread across the globe. All of this was artificial. All this was temporary. All this is ending. In *The End of the World is Just the Beginning*, author and geopolitical strategist Peter Zeihan maps out the next world: a world where countries or regions will have no choice but to make their own goods, grow their own food, secure their own energy, fight their own battles, and do it all with populations that are both shrinking and

aging. The list of countries that make it all work is smaller than you think. Which means everything about our interconnected world - from how we manufacture products, to how we grow food, to how we keep the lights on, to how we shuttle stuff about, to how we pay for it all - is about to change. A world ending. A world beginning. Zeihan brings readers along for an illuminating (and a bit terrifying) ride packed with foresight, wit, and his trademark irreverence.
