The Art of Training Your Dog: How to Gently Teach Good Behavior Using an E-Collar St. Martin's Press
This book gathers chapters from some of the top international empirical software engineering researchers focusing on the practical knowledge necessary for conducting, reporting and using empirical methods in software engineering. Topics and features include guidance on how to design, conduct and report empirical studies. The volume also provides information across a range of techniques, methods and qualitative and quantitative issues to help build a toolkit applicable to the diverse software development

contexts
Assistive Technology for Cognition
Routledge
This eBook focuses on current progress in understanding the role of chromatin structure, its modifications and remodeling in developmental and physiological processes. Eukaryotic genomes are packed into the supramolecular nucleoprotein structure of chromatin. Therefore, our understanding of processes such as DNA replication and repair, transcription, and cell differentiation requires an understanding of the structure and function of chromatin. While the nucleotide sequence of the DNA component of chromatin constitutes the genetic material of the cell, the other chromatin components (and also modifications of bases in the DNA itself) participate in so-called epigenetic

processes. These processes are essential, e.g., in ontogenesis or adaptation to environmental changes. Therefore, epigenetics is particularly important (and elaborated) in plants that show a high developmental plasticity and, as sessile organisms, display an enormous capacity to cope with environmental stress. In these processes, epigenetic mechanisms show a crosstalk with plant signaling pathways mediated by phytohormones and redox components. You are welcome to read examples of current research and review articles in this hot research topic.
Frontiers in the Actin Cytoskeleton
Routledge
Electroencephalograms (EEGs) are becoming increasingly important measurements of brain activity and they have great potential for the diagnosis and treatment of mental and brain diseases

and abnormalities. With appropriate interpretation methods they are emerging as a key methodology to satisfy the increasing global demand for more affordable and effective clinical and healthcare services. Developing and understanding advanced signal processing techniques for the analysis of EEG signals is crucial in the area of biomedical research. This book focuses on these techniques, providing expansive coverage of algorithms and tools from the field of digital signal processing. It discusses their applications to medical data, using graphs and topographic images to show simulation results that assess the efficacy of the methods. Additionally, expect to find: explanations of the significance of EEG signal analysis and processing (with examples) and a useful theoretical and mathematical background for the analysis and processing of EEG signals; an exploration of normal and abnormal EEGs, neurological symptoms and diagnostic information, and representations of the EEGs; reviews of theoretical approaches in EEG modelling, such as restoration, enhancement, segmentation, and the removal of different internal and external artefacts from the EEG and ERP (event-related potential) signals; coverage of major abnormalities such as seizure, and mental illnesses such as dementia, schizophrenia, and Alzheimer's disease, together with their mathematical interpretations from the EEG and ERP signals and sleep phenomenon; descriptions of nonlinear and adaptive digital signal processing techniques for abnormality detection, source localization and brain-computer interfacing using multi-channel EEG data with emphasis on non-invasive techniques, together with future topics for research in the area of EEG signal processing. The information within EEG Signal Processing has the potential to enhance the clinically-related information within EEG signals, thereby aiding physicians and ultimately providing more cost effective, efficient diagnostic tools. It will be beneficial to psychiatrists, neurophysiologists, engineers, and students or researchers in neurosciences. Undergraduate and postgraduate biomedical engineering students and postgraduate epileptology students will also find it a helpful reference.

Everyday Artists Springer Science & Business Media

Renowned economist and author of *Big Business* Tyler Cowen brings a groundbreaking analysis of capitalism, the job market, and the growing gap between the one percent and minimum wage workers in this follow-up to the New York

Times bestseller *The Great Stagnation*. The United States continues to mint more millionaires and billionaires than any country ever. Yet, since the great recession, three quarters of the jobs created here pay only marginally more than minimum wage. Why is there growth only at the top and the bottom? Economist and bestselling author Tyler Cowen explains that high earners are taking ever more advantage of machine intelligence and achieving ever-better results. Meanwhile, nearly every business sector relies less and less on manual labor, and that means a steady, secure life somewhere in the middle—average—is over. In *Average Is Over*, Cowen lays out how the new economy works and identifies what workers and entrepreneurs young and old must do to thrive in this radically new economic landscape.

Athenian Economy and Society Princeton University Press

This handbook explores organized crime, which it divides into two main concepts and types: the first is a set of stable organizations illegal per se or whose members systematically engage in crime, and the second is a set of serious criminal activities that are typically carried out for monetary gain.

The Oxford Handbook of Organized Crime PublicAffairs

Pan Am, Gimbel's, Pullman, Douglas Aircraft, Digital Equipment Corporation, British Leyland—all once as strong as dinosaurs, all now just as extinct. Destruction of businesses, fortunes, products, and careers is the price of progress toward a better material life. No one understood this bedrock economic principle better than Joseph A. Schumpeter. "Creative destruction," he said, is the driving force of capitalism. Described by John Kenneth Galbraith as "the most sophisticated conservative" of the twentieth century, Schumpeter made his mark as the prophet of incessant change. His vision was stark: Nearly all businesses fail, victims of innovation by their competitors. Businesspeople ignore this lesson at their peril—to survive, they must be entrepreneurial and think strategically. Yet in Schumpeter's view, the general prosperity produced by the "capitalist engine" far outweighs the wreckage it leaves behind. During a tumultuous life spanning two world wars, the Great Depression, and the early Cold War, Schumpeter reinvented himself many times. From boy wonder in turn-of-the-century Vienna to captivating Harvard professor, he was stalked by tragedy and haunted by the specter of his rival, John Maynard Keynes. By 1983—the centennial

of the birth of both men—Forbes christened Schumpeter, not Keynes, the best navigator through the turbulent seas of globalization. Time has proved that assessment accurate. *Prophet of Innovation* is also the private story of a man rescued repeatedly by women who loved him and put his well-being above their own. Without them, he would likely have perished, so fierce were the conflicts between his reason and his emotions. Drawing on all of Schumpeter's writings, including many intimate diaries and letters never before used, this biography paints the full portrait of a magnetic figure who aspired to become the world's greatest economist, lover, and horseman—and admitted to failure only with the horses. *Average Is Over* Springer

Fully train your dog in just six weeks with this revolutionary new method. The Monks of New Skete, long-time breeders of German shepherds and renowned trainers of all breeds and mixes, have codeveloped a successful new training technique. They and Marc Goldberg, who pioneered the approach, offer you and your canine companion a way forward using a game-changing tool: the invisible leash or electronic collar. Now in paperback, *The Art of Training Your Dog* presents their compassionate, efficient system along with helpful advice on choosing the best collar. At the right moment, using a light touch—that many humans can't even feel—strategically refocuses your dog's attention. This method helps you create effortless teaching moments that tie into your dog's pack instincts and help strengthen your bond with your dog. In as little as six weeks, your pup can master good leash manners; obey basic commands, such as sit, down, and stay; stop problematic behaviors; and play safely off leash with consistent recall.

The Israel Test Shengold Books

In this witty, accessible, and revealing book, Deirdre McCloskey demystifies economic theory and practice to show that behind the economists' claim to certainty is the ancient art of storytelling. *If You're So Smart* will engage, enlighten, and empower anyone trying to evaluate the experts who stand ready to engineer our lives. "Writing with delicious wit and great seriousness."—Publishers Weekly. "McCloskey is more interesting on an uninspired day than most of her peers can manage at their very best."—Peter Passell, *New York Times*

The new opportunities for economic development in Eastern Europe and the approach of 1992 have heightened interest in the development of the

European economy. This volume, which includes contributions from some of the world's leading economic historians, presents and discusses the latest research findings on the industrialization and modernization of the European economy during the nineteenth century.

International Law and the Use of Force Humana Press

In this ground-breaking analysis of the world's first private banks, Edward Cohen convincingly demonstrates the existence and functioning of a market economy in ancient Athens while revising our understanding of the society itself. Challenging the "primitivistic" view, in which bankers are merely pawnbrokers and money-changers, Cohen reveals that fourth-century Athenian bankers pursued sophisticated transactions. These dealings--although technologically far removed from modern procedures--were in financial essence identical with the lending and deposit-taking that separate true "banks" from other businesses. He further explores how the Athenian banks facilitated tax and creditor avoidance among the wealthy, and how women and slaves played important roles in these family businesses--thereby gaining legal rights entirely unexpected in a society supposedly dominated by an elite of male citizens. Special emphasis is placed on the reflection of Athenian cognitive patterns in financial practices. Cohen shows how transactions were affected by the complementary opposites embedded in the very structure of Athenian language and thought. In turn, his analysis offers great insight into daily Athenian reality and cultural organization.

EEG Signal Processing Cambridge University Press

This book presents a lucid, comprehensive, and entertaining narrative of culture and society in late 19th- and early 20th-century Maharashtra through a perceptive study of its theatre and cinema. An intellectual tour de force, it will be invaluable to scholars and researchers of modern Indian history, theatre and film studies, cultural studies, sociology, gender studies as well as the interested general reader.

Human Trafficking Finances Encounter Books

" ... Designed to provide teachers with a collection of skills, ideas and techniques to support current curriculum requirements in the visual arts learning areas."--Book A. p. i.

The UN Genocide Convention MDPI

In the last few years, technologies that allow for monitoring and manipulating neuronal networks at a single cell

resolution have been rapidly expanding. In *Neuronal Network Analysis: Concepts and Experimental Approaches*, experts in the field provide an overview of some of the most advanced techniques for the study of neuronal circuits, highlighting current technical limitations and providing a vision of what is yet to come. Broken into six convenient, interdependent sections, this volume covers optical approaches, electrophysiological approaches, both in vitro and in vivo, optogenetics, morpho-functional approaches, and neuronal network analysis in humans. As a volume in the *Neuromethods* series, this work provides the kind of detailed description and implementation advice that is crucial for getting optimal results. Authoritative and cutting-edge, *Neuronal Network Analysis: Concepts and Experimental Approaches* will be useful for early career neuroscientists, as well as for experienced neuroscientists, by providing a practical framework for studying the brain as an organ while maintaining an appreciation for its cellular diversity.

Neurocinema Oxford Commentaries on Interna

Life improves under the economic system often called "entrepreneurial capitalism" or "creative destruction," but more accurately called "innovative dynamism." *Openness to Creative Destruction: Sustaining Innovative Dynamism* shows how innovation occurs through the efforts of inventors and innovative entrepreneurs, how workers on balance benefit, and how good policies can encourage innovation. The inventors and innovative entrepreneurs are often cognitively diverse outsiders with the courage and perseverance to see and pursue serendipitous discoveries or slow hunches. Arthur M. Diamond, Jr. shows how economies grow where innovative dynamism through leapfrog competition flourishes, as in the United States from roughly 1830-1930. Consumers vote with their feet for innovative new goods and for process innovations that reduce prices, benefiting ordinary citizens more than the privileged elites. Diamond highlights that because breakthrough inventions are costly and difficult, patents can be fair rewards for invention and can provide funding to enable future inventions. He argues that some fears about adverse effects on labor market are unjustified, since more and better new jobs are created than are destroyed, and that other fears can be mitigated by better policies. The steady growth in regulations, often defended on the basis of the precautionary principle, increases the costs to potential entrepreneurs and thus

reduces innovation. The "Great Fact" of economic history is that after at least 40,000 years of mostly "poor, nasty, brutish, and short" humans in the last 250 years have started to live substantially longer and better lives. Diamond increases understanding of why.

Law and Memory University of Chicago Press

In this book, George Gilder claims that the reason there is such hatred and criticism of the current state of Israel is because these critics are envious of Israel's sudden rise as a world power. This, he claims, is an inherent quality of Judaism, which, "perhaps more than any other religion, favors capitalist activity and provides a rigorous moral framework for it." Those who currently hate Israel's economy, such as surrounding countries in the Middle East and Western European nations that are facing socialist decline, have failed the "Israel Test" because they seek to tear down this country's success, and America's ability and desire to defend Israel will define our future survival as a nation: "If Israel is destroyed," he says, "capitalist Europe will likely die as well, and America, as the epitome of productive and creative capitalism spurred by Jews, will be in jeopardy."

If You're So Smart Routledge

Muhammad Yunus, the practical visionary who pioneered microcredit and, with his Grameen Bank, won the 2006 Nobel Peace Prize, has developed a visionary new dimension for capitalism which he calls "social business." By harnessing the energy of profit-making to the objective of fulfilling human needs, social business creates self-supporting, viable commercial enterprises that generate economic growth even as they produce goods and services that make the world a better place. In this book, Yunus shows how social business has gone from being a theory to an inspiring practice, adopted by leading corporations, entrepreneurs, and social activists across Asia, South America, Europe and the US. He demonstrates how social business transforms lives; offers practical guidance for those who want to create social businesses of their own; explains how public and corporate policies must adapt to make room for the social business model; and shows why social business holds the potential to redeem the failed promise of free-market enterprise.

The Alveolar Epithelium Routledge

"[The author] traces the full arc of Thoreau's life, from his early days in the intellectual hothouse of Concord, when the American experiment still felt fresh and precarious, and 'America was a family affair, earned by one generation and about

to pass to the next.' By the time he died in 1862, at only forty-four years of age, Thoreau had witnessed the transformation of his world from a community of farmers and artisans into a bustling, interconnected commercial nation. What did that portend for the contemplative individual and abundant, wild nature that Thoreau celebrated? Drawing on Thoreau's copious writings, published and unpublished, [the author] presents a Thoreau vigorously alive in all his quirks and contradictions: the young man shattered by the sudden death of his brother; the ambitious Harvard College student; the ecstatic visionary who closed Walden with an account of the regenerative power of the Cosmos. We meet the man whose belief in human freedom and the value of labor made him an uncompromising abolitionist; the solitary walker who found society in nature, but also found his own nature in the society of which he was a deeply interwoven part. And, running through it all, Thoreau the passionate naturalist, who, long before the age of environmentalism, saw tragedy for future generations in the human heedlessness around him."--

Prevention and Health, Everybody's Business Routledge

This unique volume addresses the financial mechanisms that enable human trafficking - its actors, structures, and logistics. Viewing each stage of the market, human traffickers may need significant financial resources for recruitment, transportation, and exploitation. Drawing upon cross-disciplinary research expertise in criminology, sociology, law and economics, this book offers insights from law enforcement officers, policy makers, NGOs, and traffickers and their victims. Using three European countries - Bulgaria, Italy and the United Kingdom - it provides an account on the sources of capital for initiating and sustaining a human trafficking scheme, discussing the involvement of criminal structures, legitimate businesses, financial institutions, and information and communication technologies in the running of these enterprises. It also addresses the ways in which entrepreneurs and customers settle payments, the costs of conducting

business in human trafficking, and how profits from the business are spent and invested. This important contribution to the transnational organized crime knowledge base will be of interest to researchers and academics, as well as law enforcement, regulatory agencies, and policy makers combating human trafficking.

Born To Kvetch R.I.C. Publications

For the young child, art is a way of solving problems, conceptualizing the world, and creating new possibilities. In *Everyday Artists*, the author addresses the disconnect that exists between the teaching of art and the way young children actually experience art. In doing so, this book questions commonly held notions and opens up exciting new possibilities for art education in the early childhood classroom. A practicing teacher herself, Bentley uses vignettes of children's everyday activities—from block building to clean-up to outdoor play—to help teachers identify and scaffold the genuine artistic practice of young children. **Book Features:** Tangible examples of everyday arts experiences told through lively classroom stories. An examination of the teacher's role with suggestions of appropriate ways to support children's artistic expression. Clear explanations of how inquiry and creativity contribute to the overall thinking and learning of the young child. A "Voice of the Teacher" section that offers teaching strategies for extending children's thinking and learning. A wide-range of ideas for teachers who feel they do not know how to "do" art. Dana Frantz Bentley is a teacher researcher and preschool teacher at Buckingham Browne and Nichols School in Cambridge, Massachusetts. She received a Doctorate of Education, Art, and Art Education from Teachers College, Columbia University. "Much has been written about the role of the arts in education, especially about the importance of the arts to early childhood learning. Dana Frantz Bentley endows the arts with an additional and central kind of significance rooted in a broad conception of cognition." —From the Foreword by Judith M. Burton, Teachers College, Columbia University "Like the young children she describes, Dana Frantz Bentley is an 'everyday artist,' making something 'beautiful' of her informed and thoughtful pedagogy. There is much to learn from the artful reflection and

generative inquiry of this inspired early childhood educator." —Jessica Hoffmann Davis, author of *Why Our Schools Need the Arts*

Prophet of Innovation University of Chicago Press

The Convention for the Prevention and Punishment of the Crime of Genocide, adopted by the United Nations General Assembly on 9 December 1948, is one of the most important instruments of contemporary international law. It was drafted in the aftermath of the Nuremberg trial to give flesh and blood to the well-known dictum of the International Military Tribunal, according to which 'Crimes against international law are committed by men, not by abstract entities, and only by punishing individuals who commit such crimes can the provisions of international law be enforced'. At Nuremberg, senior state officials who had committed heinous crimes on behalf or with the protection of their state were brought to trial for the first time in history and were held personally accountable regardless of whether they acted in their official capacity. The drafters of the Convention on Genocide crystallized the results of the Nuremberg trial and thus ensured its legacy. The Convention established a mechanism to hold those who committed or participated in the commission of genocide, the crime of crimes, criminally responsible. Almost fifty years before the adoption of the Rome Statute, the Convention laid the foundations for the establishment of the International Criminal Court. It also obliged its Contracting Parties to criminalize and punish genocide. This book is a much-needed Commentary on the Genocide Convention. It analyzes and interprets the Convention thematically, thoroughly covering every article, drawing on the Convention's travaux préparatoires and subsequent developments in international law. The most complex and important provisions of the Convention, including the definitions of genocide and genocidal acts, have more than one contribution dedicated to them, allowing the Commentary to explore all aspects of these concepts. The Commentary also goes beyond the explicit provisions of the Convention to discuss topics such as the retroactive application of the Convention, its status in customary international law and its future. "
