renowned
Bible teacher
Alistair Begg.
We all need to
be reminded
of the truth

that anchors
our life and
excites and
equips us to
live for Christ.
Reflecting on
a short
passage each

spans the
Scriptures to
show us the
greatness and
grace of God,
and to thrill

our hearts to live as His children. His clear, faithful exposition and thoughtful application mean that this resource will both engage your mind and stir your heart. Each day includes prompts to apply what you've read, a related Bible text to enjoy, and a plan for reading through the whole of the Scriptures in a year. The hardback cover and ribbon marker make this a wonderful gift. *B1 Preliminary for Schools 2*

Edward Miller (1915-2000) was a medieval historian who spent most of his career teaching in Cambridge. An undergraduat e and research fellow at St John's, he later went on</p>

to become Master of Fitzwilliam. His Portrait blends the history of St John's with wider developments in education, as well as social, political and economic history. As such it is a fine example of an institutional history written from within, with an unbiased assessment of the many changes the College had seen. The chapter on the period from 1918 to the early sixties, based on

Miller's own reminiscences and those of his colleagues, is an important record of life in the college in an age of modernisation and change. The second edition of a bestselling textbook, *Using R for Introductory Statistics* guides students through the basics of R, helping them overcome the sometimes steep learning curve. The author does this by breaking the material down into small, task-oriented steps. The second edition maintains the features that made the first edition so popular, while updating data, examples, and

changes to R in line with the current version. See *What's New in the Second Edition*: Increased emphasis on more idiomatic R provides a grounding in the functionality of base R. Discussions of the use of RStudio helps new R users avoid as many pitfalls as possible. Use of knitr package makes code easier to read and therefore easier to reason about. Additional information on

computer-intensive approaches motivates the traditional approach. Updated examples and data make the information current and topical. The book has an accompanying package, UsingR, available from CRAN, R's repository of user-contributed packages. The package contains the data sets mentioned in the text (data(package = "UsingR")), answers to selected problems	(answers()), a few demonstrations (demo()), the errata (errata()), and sample code from the text. The topics of this text line up closely with traditional teaching progression; however, the book also highlights computer-intensive approaches to motivate the traditional approach. The authors emphasize realistic data and examples and rely on visualization techniques to	gather insight. They introduce statistics and R seamlessly, giving students the tools they need to use R and the information they need to navigate the sometimes complex world of statistical computing. <u>The Ecco Anthology of International Poetry</u> MacMillan Teaches readers how to test and analyze software to achieve an acceptable level of quality at an acceptable

Gateway B2 Workbook World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work.

Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is

already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development.

Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this

revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than

cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
