Highly practical eyelid surgery resource

informs important reconstruction decisions and strategies Skin malignancies frequently affect the periocular area, necessitating excision followed by eyelid reconstruction . Periocular trauma is also quite common, and because of the highly complex regional anatomy, requires expertise for effective reconstruction . Preparation by ophthalmic plastic surgeons prior

to periorbital reconstruction is often not possible due to the unpredictability of defects left after Mohs micrographic surgeons clear tumor margins or in cases of trauma. *Eyelid Reconstruction* by renowned expert Suzanne Freitag and esteemed coeditors N. Grace Lee, Daniel Lefebvre, and Michael Yoon fills a void in the literature. The book provides a quick and practical ophthalmic

plastic surgery guide on how to plan and perform a full spectrum of periocular reconstruction procedures. The textbook is a compilation of patient cases and the authors' vast, richly diverse expertise. The book starts with two chapters covering complex periorbital anatomy and basic surgical principles, both of which are critical to performing safe and effective surgery. The third chapter

provides a comprehensive overview of Mohs surgery in the periorbital area, an important topic given many defect reconstructions are secondary to Mohs micrographic surgical excisions. Subsequent chapters, organized by anatomic region, feature discussion of surgical approaches for reconstructions of various size and depth defects. The final chapter

details eyelid trauma repair, including lid margin and lacrimal lacerations. Key Features An essential go-to pre- or peri-operative reference surgeons can consult quickly as reconstruction cases arise Practical and concise procedural descriptions accompanied by numerous high-quality photographs and illustrations enhance comprehension Chapters dedicated to medial canthus, lower eyelid, upper eyelid, and lateral canthus reconstruction procedures discuss special considerations based on underlying anatomy, adnexal structures, and required functions This is a must-have resource for residents, fellows, and experienced surgeons in the fields of ophthalmic plastic surgery, ophthalmology, otolaryngology, facial plastic surgery, plastic surgery, dermatology, Mohs surgery, and maxillofacial surgery. *Flaps and Reconstructive Surgery E-Book* CRC Press The definitive resource on surgical flaps from renowned MD Anderson plastic surgeons Handbook of Reconstructive Flaps by Matthew Hanasono and Charles Butler reflects contributions from clinicians associated with the prestigious

This unique resource provides a comprehensive review of microvascular surgery techniques using the most common reconstructive pedicle flaps, free flaps, perforator flaps, and workhorse flaps. Seven parts organized anatomically detail flaps used for the head/neck, chest, back, abdomen, pelvis, upper extremity, and lower extremity, followed by an eighth part on lymphedema. Each flap or procedure includes pertinent anatomy, indications for usage, preoperative considerations, a concise step-by-step description of the operative setup, the actual procedure, and donor site closure. Key Features A Pearls and Pitfalls section in each chapter outlines key concepts and critical nuances in surgical techniques or patient management. More than 200 clear diagrams, line drawings, and illustrative surgical photos enhance understanding of high impact points. High quality videos posted online elucidate flap techniques. A

section dedicated to the microsurgical treatment of lymphedema covers lymphovenous bypass, vascularized lymph node transfers from the groin and supraclavicular region, and lymphovenous anastomosis. This is an essential, user-friendly backpack reference for plastic surgery residents to use during rounds and as a board prep. It is also an excellent resource for plastic surgeons new
