From the Publisher: People know that the climate is changing for the worse, that species are being driven to extinction at a rapidly increasing rate, and that entire ecosystems are becoming shadows of their former richness. They know but they do not understand. The global environmental crisis is closing in on humanity from all directions, yet the crisis barely registers on this culture's list of problems. As we stand around, humanity is doomed to a collapse that may leave only a few nomads, and a toxic, barely survivable Earth in its wake. So why is nothing being done beyond changing light bulbs, recycling, and buying organic food? It's certainly not for a lack of good reasons. Humans have no motivation stronger than survival, yet the culture that dominates—the culture we call industrial civilization—has created a set of priorities that values financial wealth, the possession of superfluous goods, and short, cheap thrills above that most basic need. In short, we are prepared to die in order to live a life that is killing us. *Time's Up!* is about changing our behavior. The book describes how our actions affect the very things on Earth that we depend on for survival, at scales that we rarely contemplate. It arms us with the tools to free us from a culture that has blinded us for centuries, and which will allow us to live in a way that will give Earth, and ourselves, a viable future.

Cracking the Praxis Tests (Core Academic Skills + Subject Assessments + PLT Exams), 3rd Edition Bushra Arshad
 Insect Ecology: An Ecosystem Approach, Fourth Edition, follows a hierarchical organization that begins with relatively easy-to-understand chapters on adaptive responses of insect populations to various environmental changes, disturbances, and anthropogenic activities, how insects find food and habitat resources, and how insects allocate available energy and nutrients. Chapters build on fundamental information to show how insect populations respond to changing environmental conditions, including spatial and temporal distribution of food and habitat. The next section integrates populations of interacting species within communities and how these interactions determine structure of communities over time and space. Other works in insect ecology stop there, essentially limiting presentation of insect ecology to evolutionary responses of insects to their environment, including the activities of other species. The unique aspect of this book is its four chapters on ecosystem structure and function, and how herbivores, pollinators, seed predators, and detritivores drive ecosystem dynamics and contribute to ecosystem stability. - Provides the most advanced synthesis of insect ecology, with updated material throughout and new chapters - Presents the roles of insects in delivery of ecosystem services and applications to pest management and conservation - Features full coverage of ecosystem structure and function balanced with essential background on evolutionary aspects - Includes case studies highlighting practical and theoretical applications for topics covered in each chapter

A potent new book examines the overlap between our ecological crisis and video games Video games may be fun and immersive diversions from daily life, but can they go beyond the realm of entertainment to do something serious—like help us save the planet? As one of the signature issues of the twenty-first century, ecological deterioration is seemingly everywhere, but it is rarely considered via the realm of interactive digital play. In *Playing Nature*, Alenda Y. Chang offers groundbreaking methods for exploring this vital overlap. Arguing that games need to be understood as part of a cultural response to the growing ecological crisis, *Playing Nature* seeds conversations around key environmental science concepts and terms. Chang suggests several ways to rethink existing game taxonomies and theories of agency while revealing surprising fundamental similarities between game play and scientific work. Gracefully reconciling new media theory with environmental criticism, *Playing Nature* examines an exciting range of games and related art forms, including historical and contemporary analog and digital games, alternate- and augmented-reality games, museum exhibitions, film, and science fiction. Chang puts her surprising ideas into conversation with leading media studies and environmental humanities scholars like Alexander Galloway, Donna Haraway, and Ursula Heise, ultimately exploring manifold ecological futures—not all of them dystopian.

Many people have sought to define neurolinguistic programming otherwise known as NLP. John Grinder said, NLP is the epistemology of returning to what we have lost a state of grace. Richard Bandler said, NLP is an attitude which is an insatiable curiosity about human beings with a methodology that

leaves behind it a trail of techniques. And Robert Dilts said, NLP is whatever works. No matter how you define it, NLP has the potential to transform your life and Ana Marcela Duarte, a certified master practitioner in NLP, explains what it is and how to use it in this workbook. Learn how to: use various techniques to develop rapport with people; look at eye patterns to determine if someone is being truthful; do things that unsuccessful people fail to do; empower yourself with seven easy steps; and master the art of storytelling to achieve your goals. Many of the worlds most successful people have used NLP to achieve their dreams for some time, but the public has remained in the dark. With the insights and exercises in this workbook, you'll find that you, too, can take massive action to change your life for the better with NLP.
