A food system comprises

the entire range of actors  
and interlinked activities  
related to food

production, processing,  
distribution, marketing  
and trade, preparation,  
consumption, and  
disposal. When a food

system operates without  
compromising the needs  
of future generations, it is  
considered to be a  
“Sustainable Food  
System.” The present-day  
food systems in Sri Lanka  
are diverse, and the

natural and physical environment, infrastructure, institutions, society and culture, and policies and regulations within which the food systems operate, as well as the technologies employed, have shaped their outcomes. Agricultural research is a key factor in terms of innovation and technological advances. Innovation has been the main driver of food systems' transformation over the past few decades and will be critical to addressing the needs of a

rapidly growing population in a context of climate change and scarcity of natural resources. In addition, agricultural research must help meet the rising demand for food at affordable prices. Comprising 17 chapters written by specialist(s) in their respective subject-areas, this Contributed Volume on "Agricultural Research for Sustainable Food Systems in Sri Lanka: A Historical Perspective" shares the scientific knowledge accumulated by the

National Agricultural Research System of Sri Lanka, including universities, and offers recommendations on how to make food systems more sustainable in order to address the current needs of Sri Lankan society. It presents perspectives on four key thematic areas, namely: (i) Crop and animal production, management, and improvement, (ii) Agro-product processing technologies, (iii) Natural resource management, and (iv) Socio-economic development and agri-

business management. *Energy Woodhead Publishing* Loyalty (and the damnable lack of it in his wife) was the thought uppermost in the mind of Sir Andrew Millbanke as he looked down at Lady Alexandra's dead body, spread-eagled on the paved pathway of the Residency.' And so begins an engrossing and dramatic family drama, set against the backdrop of Ceylon's bumpy evolution into Sri Lanka, as the Wijesinha clan struggle to balance their

staunch political ambition against the ignominy of an embarrassing family scandal. And when two young family members, cousins Tsunami and Latha, meet and become firm friends no one can guess that their triumphant friendship will be played out over the passing years against both the best and the worst the newly independent Sri Lanka can offer as these two smart and Westernised young women pursue their own personal freedoms.

Edition Proceedings, Peradeniya University International Research Sessions Abstracts; chiefly with reference to Sri Lanka. The Road to Peradeniya Autobiography of Sir William Ivor Jennings, 1903-1965, British constitutional lawyer and educationalist. International Dictionary of Library Histories Contributed papers presented at the conference organized by International Water Management Institute, Irrigation Dept., Dept. of

Agriculture, and Hector Kobbekaduwa Agrarian Research and Training Institute. Resource Assessment and Land Use Planning in Sri Lanka Nova Publishers This book is a collection of refereed invited papers on the history of computing from the 1940s to the 1990s with one paper going back to look at Italian calculating/computing machines from the first century to the 20th century. The 22 papers cover a wide range of computing related topics

such as specific early computer systems, their construction, their use and their users; software programming and operating systems; people involved in the theory, design and use of these computers; computer education; and conservation of computing technology. Many of the authors were actually involved in the events they describe and share their specific reflections on the history of computing. Pali Studies Duke University Press

Traditional research methods in marketing can be illuminating when used well, but all too often their data-driven results fail to provide the depth of understanding that organisations need to anticipate market needs. Alternative Market Research Methods: Market sensing is a new approach that enables

researchers to get greater depth and meaning from their research and organisations to make smarter strategic decisions. This book, the first text dedicated to the topic, explains market sensing simply and practically and demonstrates how it can benefit researchers. It teaches non-mainstream and alternative research methods which facilitate innovative research design, and achieves deep insights into the mindsets of consumers. The methods explored in

this book include: emotional scaling ; discourse analysis; consumer ethnography; social media networks; narrative and story telling; gamification. With a wealth of case studies and pedagogy to aid student learning, as well as online teaching aids including PowerPoint presentations and video content, this ground-breaking textbook is an essential resource for anyone that wants to expand their repertoire of marketing research methods to create a

research project that will be original and insightful.

This comprehensive volume provides uniquely diverse insights into various aspects of decentralization and development from both developed and developing countries, with special reference to Sri Lanka. For a quarter century, Sri Lanka was battered by its prolonged civil war, which ended in 2009, but has now achieved relative peace and stability. Having developed rapidly, Sri Lanka offers a classic example for developing countries. There is,

however, a strong need, particularly in the context of postwar conflict, to formulate policies for reconciliation, peace building, and development at all levels—local, provincial, and national.

Decentralization itself is not a new subject; however, how to devolve power to local administrative levels within a unitary system and how to link the devolved power to make local administrative systems more conducive to development and

provide better services for citizens are challenging tasks in many countries. Taking into account the developmental, governance, and conciliatory needs and the sensitivity of central-local relations, this volume critically examines the local government systems in Sri Lanka. It also proposes a viable, effective and autonomous local-level administrative unit based, which draws on experiences from Japan and other countries, and identifies the role and functions of such a unit.

The book presents commissioned papers from a three-year research project undertaken by internationally respected experts with financial support by the Japan Society for the Promotion of Science (JSPS) under a Grant-in-Aid for Scientific Research.

Decentralization and Development of Sri Lanka Within a Unitary State  
Routledge

The International Water Management Institute (IWMI) has, for many years, been involved in

research on pesticide poisoning to analyse the reasons for the high number of pesticide poisoning cases in Sri Lanka and discuss ways of controlling the problem through changes in agricultural practices and community involvement. More recently, research has focused on risk factors for deliberate and occupational pesticide poisoning and on the impact that a shift towards Integrated Pest Management (IPM) will have on the health of farming families. A

workshop on Pesticides: Health Impacts and Alternative□ was held at the Colombo Hilton Hotel on 24 January 2002. The workshop marked the end of IWMI's research on pesticide poisoning in Sri Lanka and provided researchers and policy makers from various disciplines such as health, environment, and agriculture an opportunity to share and discuss recent findings and to discuss strategies to reduce pesticide poisoning. This paper presents the workshop

proceedings and includes a resource handbook for Sri Lanka on health impacts of pesticides and alternatives by listing names of relevant institutes, addresses and annotated references. *Proceedings, Peradeniya University International Research Sessions* Springer Science & Business Media Abstracts; chiefly with reference to Sri Lanka. *Peradeniya Disha* Publications Collection of essays on undergraduate life at the University of Peradeniya.

 The first compendium on

robotic art of its kind, this book explores the integration of robots into human society and our attitudes, fears and hopes in a world shared with autonomous machines. It raises questions about the benefits, risks and ethics of the transformative changes to society that are the consequence of robots taking on new roles alongside humans. It takes the reader on a journey into the world of the strange, the beautiful, the uncanny and the daring – and into the minds and works of some

of the world's most prolific creators of robotic art. Offering an in-depth look at robotic art from the viewpoints of artists, engineers and scientists, it presents outstanding works of contemporary robotic art and brings together for the first time some of the most influential artists in this area in the last three decades. Starting from a historical review, this transdisciplinary work explores the nexus between robotic research and the arts and examines the diversity of

robotic art, the encounter with robotic otherness, machine embodiment and human-robot interaction. Stories of difficulties, pitfalls and successes are recalled, characterising the multifaceted collaborations across the diverse disciplines required to create robotic art. Although the book is primarily targeted towards researchers, artists and students in robotics, computer science and the arts, its accessible style appeals to anyone intrigued by robots and the arts.

 Well over a million people

of Sri Lankan origin live outside South Asia. The Encyclopedia of the Sri Lanka Diaspora is the first comprehensive study of the lives, culture, beliefs and attitudes of immigrants and refugees from this island. The volume is a joint publication between the Institute of South Asian Studies, NUS, and Editions Didier Millet. It focuses on the relationship between culture and economy in the Sri Lanka diaspora in the context of globalisation, increased transnational culture flows

and new communication technologies. In addition to the geographic mapping of the Sri Lanka diaspora in the various continents, thematic chapters include topics on “long distance nationalism”, citizenship, Sinhala, Tamil and Burgher diaspora identities, religion and the spread of Buddhism, as well as the Sri Lankan cultural impact on other nations.

Over two billion people live in tropical lands. Most of them live in intimate contact with the immediate geological environment, obtaining their food and water directly from it. The unique geochemistry of these tropical environments have a

marked influence on their health, giving rise to diseases that affect millions of people. The origin of these diseases is geologic as exemplified by dental and skeletal fluorosis, iodine deficiency disorders, trace element imbalances to name a few. This book, one of the first of its kind, serves as an excellent introduction to the emerging discipline of Medical Geology.
