This interdisciplinary book ties the historical work of Descartes to his successors through current research and critical overviews on the neuroscience of consciousness, the brain, and cognition. This text is the first historical survey to focus on the cohesions and discontinuities between historical and contemporary thinkers working in philosophy, physiology, psychology, and neuroscience. The book introduces and analyzes early discussions of consciousness, such as: metaphysical alternatives to scientific explanations of consciousness and its connection to brain activity; claims about the possibilities and limits of neuroscientific accounts of

consciousness and cognition; and the proposition of a “non-reductive naturalism” concerning phenomenal consciousness and rationality. The author assesses the contributions of early philosophers and scientists on brain, consciousness and cognition, among them: Descartes, Malebranche, Spinoza, Leibniz, Locke, Newton, Haller, Kant, Fechner, Helmholtz and du Bois-Reymond. The work of these pioneers is related to that of modern researchers in physiology, psychology, neuroscience and philosophy of mind, including: Freud, Hilary Putnam, Herbert Feigl, Gerald Edelman, Jean-Pierre Changeux, Daniel Dennett and

David Chalmers, amongst others. This text appeals to researchers and advanced students in the field.

Springer Nature  
Now in full-color, Miller's Anatomy of the Dog, 4th Edition features unparalleled coverage of canine morphology, with detailed descriptions and vivid illustrations that make intricate details easier to see and understand. Updated content reflects the latest knowledge on development, structure, and function, making this a valuable reference for anatomists, veterinary students, technicians, clinicians,

experimentalists, and breeders. It is also useful in specialty fields such as mammalogy, biomechanics, and archaeology. - Chapters are logically organized by body system for quick reference. - Contributors are expert anatomists who provide the most current information and share their knowledge of particular structures. - An introductory chapter includes breed categories from both the American and British Registry Clubs to give you a clearer understanding of dog breeds and how they are determined. - NEW! Elaborate, full-color illustrations created by an expert medical illustrator bring canine structures to life and

enhance your understanding of their function. - New and updated content reflects the most up-to-date nomenclature from the Nomina Anatomica Veterinaria (NAV) — the standard reference for anatomical (zootomical) terminology. - Text and bibliographic references from the most current literature allow you to access all primary sources of information for further study and interpretation.

So many of the great pianists and teachers have come out of Poland and Russia (Rubinstein, Anton as well as Arthur, Leschetizky,

Paderewski, the Lhevinnes, Gilels, Richter, and others), yet we know little about their methods of learning and teaching. George Kochevitsky in *The Art of Piano Playing* supplies some important sources of information previously unavailable in the United States. From these sources, tempered by this own thinking, Kochevitsky formulated a scientific approach that can solve most problems of piano playing and teaching. George Kochevitsky graduated in 1930 from Leningrad Conservatory and did post-graduate work at Moscow Conservatory. After coming to the U.S., he taught privately in New York City, gave a number of lectures, and wrote for various music

periodicals.

"Zoological Record is published annually in separate sections. The first of these is Comprehensive Zoology, followed by sections recording a year's literature relating to a Phylum or Class of the Animal Kingdom. The final section contains the new genera and subgenera indexed in the volume." Each section of a volume lists the sections of that volume.

An engaging account of the life and work of the legendary polymath Alexander von Humboldt In this lucid biography, Andreas Daum offers a succinct and novel interpretation of the life and oeuvre of Alexander von Humboldt (1769—1859). A Prussian nobleman born into the age of European Enlightenment, Humboldt was a contemporary of Napoleon, Simón

Bolívar, and Charles Darwin. As a naturalist and scholar, he traveled the world, from the Americas to Central Asia, and recorded his observations in multiple volumes. Humboldt is still admired today for his interdisciplinary outreach and ecological awareness. Moving beyond the conventional views of Humboldt as either intellectual superhero or gentleman colonizer, Daum's incisive account focuses on Humboldt in the context of the tumultuous period of history in which he lived. Humboldt embodied the contradictions that marked the age of Atlantic Revolutions. He became a critic of slavery and embraced

the emerging civil society but remained close to authoritarian rulers. He dedicated his life to scientific research yet was driven by emotional impulses and pleaded for an aesthetic appreciation of nature. Daum introduces a man passionately striving to establish a "cosmic" understanding of nature while grappling with the era's explosion of knowledge. This book provides the first concise biography of Humboldt, covering all periods of his life, exploring his personality, the vast range of his works, and his intellectual networks. Daum helps us understand Humboldt as a seminal historical figure and illuminates the role of

science at the dawn of  
the global world.
