The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

Building Trustworthy Digital Repositories: Theory and Implementation combines information on both theory and practice related to creating trustworthy repositories for records into one up-to-date source. This book will bring all the credible theories into one place where they will be summarized, brought up to date, and footnoted. Moreover, the book will be international in its scope, and will discuss ideas coming from such important sources as Australia, Canada, and Western Europe. Until about five years ago, there were very few implementation

projects in this area. This book brings together information on implementation projects that answer these questions: What is a trustworthy repository for digital records? Who is building these repositories, and what have been the results? How are institutions building or creating these repositories? How are institutions addressing the essential requirement related to the ingest or capture of records? How are institutions automatically

and manually capturing essential metadata and audit trails? How are institutions implementing retention and disposal decisions within these systems? How are institutions implementing preservation strategies to ensure that digital objects are accessible over long periods of time? What is the current status of trustworthy repositories, and what will these systems look like in the future?
