Applied Science & Technology Index Southwater Publishing

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Passenger Transport The History Press

This report identifies potential improvements in terms of more effective safety and environmental regulation for trucks, backed by better systems of enforcement, and identifies opportunities for greater efficiency and higher productivity.

Wood Southern Africa Southwater Publishing

Extensively researched and authoritatively and enthusiastically written, entries describe in detail the history of each particular company and of course the models for which they are famous.

Popular Science

This is an insight into the most feared army of World War II. The Japanese Imperial Army grew from 1.5 million men in 1939 to 5.5 million men by the end of the war. Their highly successful campaigns in the Far East and the Pacific at the beginning of World War II were every bit as spectacular as those of the Germans in Europe, and they earned an enviable reputation as expert jungle fighters which it took some years for the Allies to match. Their code of honour also made them extremely cruel enemies to prisoners and civilians alike, while their Kamikaze suicidal tendencies meant they would automatically fight to the last without any thought of surrender. Fully illustrated with rare archive photographs, this is a comprehensive study of the army. The author describes how they mobilized and trained their soldiers, and looks at their organizational structures, from high command down to divisional level and below. Also included are uniforms, equipment, all kinds of weapons ranging from tanks and artillery, technical equipment, tactics, symbology and vehicle markings.
