**Introducing Evolution** Active Synapse  
Presents a guide to stylized figure  
anatomy for artists wishing to emulate one  
of today's popular streamlined comic book  
styles, with step-by-step demonstrations  
and studies of major muscle groups,  
heads, hands, and feet.

"Evolution" is a documentary comic book  
about the theory of evolution. But it is also  
a sometimes zany work of fiction in which  
actors put on a play about Darwinian

evolution and its political extensions.  
During the writing and rehearsing of the  
play, they will be confronted by an  
evangelical sect that wants to promote  
creationism and thus stop the play from  
being performed at all costs. They'll also  
cross paths with a rich transhumanist  
industrialist who wants to influence the  
text... After their previous collaboration on  
"Extinctions," Alexandre Franc and Jean-  
Baptiste de Panafieu enlighten and  
entertain once again!

A meteorite rockets through the atmosphere and lands on a secluded highway, landing near a truck en route. As a mysterious retrieval crew arrive to obtain the object and 'clean up' what's left behind, an object starts to move and suddenly attacks the crew killing them all!. Our story picks up 15 years later, and we find JACK, a normal boy who's pretty much a nobody, but after a shocking incident at school, Jack unknowingly triggers off a genetic alarm alerting The Nexus, who sends one of their inhuman Agents to retrieve him. Now, Jack is a ticking time bomb on the run, hiding from Nexus, and dangerously unable to control his newfound abilities. The Nexus, with unlimited resources, are not too far behind. Their leader being the key to controlling Jack's abilities, and are more than determined to reclaim their lost 'black project'.

"Tundra" is North America's fastest growing newspaper comic strip. Each of the "Tundra" books contains over 400 strips in beautiful eye-cramping color! "Tundra" takes a skewed look at the great

outdoors and all of its quirky inhabitants. Animal, vegetable or mineral; hiking, hunting or fishing; snowmen, outhouses and everything else under the sun, nothing is sacred. See why "Tundra" has been called a worthy successor to the "Far Side" by newspaper editors around the country. The "Tundra" comic strip has been picked up by more than 140 newspapers in the past 15 months alone, including papers stretching from the "Los Angeles Times" to the "Advocate" in Stamford, Connecticut. It has also been picked up by "King Features," the world's largest comic strip syndicate and is now being distributed world-wide.

A stunning graphic adaptation of one of the most famous, contested, and important books of all time. Few books have been as controversial or as historically significant as Charles Darwin's *On the Origin of Species by Means of Natural Selection, or the Preservation of Favored Races in the Struggle for Life*. Since the moment it was released on November 24, 1859, Darwin's masterwork has been heralded for changing the course

of science and condemned for its implied challenges to religion. In Charles Darwin's *On the Origin of Species*, author Michael Keller and illustrator Nicolle Rager Fuller introduce a new generation of readers to the original text. Including sections about his pioneering research, the book's initial public reception, his correspondence with other leading scientists, as well as the most recent breakthroughs in evolutionary theory, this riveting, beautifully rendered adaptation breathes new life into Darwin's seminal and still polarizing work.

Darwin for Beginners Smithsonian Institution

Unravelling Darwin's life and contribution to biology, this book traces the path from his scientific predecessors to the later modifications that his own evolutionary theories required. It provides a clear historical perspective on the progress from pre-Darwinian biology to modern genetics. Charles Darwin and the Theory of Evolution Andrews McMeel Publishing Darwin: A Graphic Biography is an inspiring expedition into the physical and intellectual adventures of Charles Darwin. Presenting Darwin's life in a smart and entertaining graphic novel, Darwin: A

Graphic Biography attempts to not only educate the reader about Darwin but also the scientific world of the 1800s. The graphic medium is ideal for recreating a very specific time frame, succeeding in placing the reader right next to a young Darwin on a "beetling" expedition. With specimens in both hands, and anxious to get another, Darwin ends up stuffing the third beetle into his mouth. Darwin's life presented in this form is an inspirational tale for kids of all ages. They'll be sure to identify with a curious young Darwin finding his way on youthful adventures in the fields near his house. The ups, downs, and near-misses of Darwin's youth are portrayed honestly and without foreshadowing of his later fame. This is a key point for younger readers: that Darwin wasn't somehow predestined to greatness. He was curious, patient, and meticulous. He persevered--a great lesson about what science is all about.

The Sandwalk Adventures is a fanciful tale of follicle mites that just happen to be living in the left eyebrow of Charles Darwin himself. To the mites, their host Darwin is a god, known as Flycatcher, and stories of his mighty ocean-spewing, world-creating powers have been handed down from generation to generation...of eyebrow mites. Upon hearing of their colorfully explained misunderstanding of who he actually is, Darwin sets the mites straight...after he convinces himself that the curious voices in his head are just ordinary voices...in his eyebrow. A humorous series of illustrated lessons in natural selection and evolution ensues and a warm-hearted story, and history lesson, about one of the greatest naturalists of all time unfolds with it. Recommended for readers with an interest in real science bounced off the funny bone. Enjoy some wholesome family entertainment that will make you think and, if you're not careful, might even teach you a thing or two.

Suitable for the high school set and above

or for advanced younger readers.

Charles Darwin's scientific work

transformed the way people think about life on Earth. From his childhood in England to his pivotal ocean voyages, he took every opportunity to study the natural world. And he helped shape a new understanding of how life forms change over time. This graphic biography highlights Darwin's youthful push to become a naturalist--against the wishes of his stern father. It also shares a look at his field research, collaborations, and scientific breakthroughs.

Collecting Generation X (2017) #1-6. The Xavier Institute for Mutant Education and Outreach has opened its doors, and is ready to foster the next generation of heroes and diplomats! But this time around, the X-Men recognize an unfortunate truth: not all mutants are created equal. Some mutants are just not made to fight Sentinels or serve as ambassadors on behalf of their kind. Some mutants will be lucky just to survive another day in a world that hates and fears them. These are the students who

should be kept out of harm's way when the Purifiers target the campus! And who better to mentor mutantkind's lovable losers through life out of the limelight...than perpetual sidekick Jubilee! But will her Generation X survive the experience?!

This format is designed to be read on color devices and cannot be read on black-and-white e-readers. In Andy Hirsch's *Science Comics: Cats*, we meet feline friends from the tiniest kodkod to the biggest tiger, and find out what makes your neighborhood domestic cats so special. Equipped with teeth, claws, and camouflage to survive everywhere from deserts to mountaintops, how did these ferocious felines make the leap from predators to playmates... and are they even done leaping? Every volume of *Science Comics* offers a complete introduction to a particular topic—dinosaurs, the solar system, robots, and more. Whether you're a fourth grader doing a natural science unit at school or a thirty year old with a secret passion for airplanes, these books are for you!

What is intelligence? From where did it come? Will the human brain grow and adapt to the ever-changing world? These and many other questions are addressed in *The Origin and Evolution of Intelligence*. This volume is composed of a series of articles presented on the origin and evolution of intelligence in March 1995 at the Eighth Annual Symposium of the UCLA Center for the Study of the Origin and Evolution of Life (CSEOL). The six authors of the contributions to this volume discuss in detail an enormous span of invertebrate and vertebrate life forms and wrestle with a vast array of problems ranging from direction finding in ants and birds to sociopolitical communication in monkeys, symbol manipulation in apes, and language use in humans. All these phenomena may be grouped under the general term intelligence, the unifying theme of the volume.

From the vast frozen wilderness of Alaska, Chad Carpenter brings *Tundra*. The National Cartoonists Society named *Tundra* as the Best Newspaper Panel Cartoon of the Year in 2007. These are award-winning cartoons from a naturally wonderful place. A tour guide might overlook some of the more quirky aspects of Alaska, but Carpenter sees it in a completely different light (even if that light only shows itself part of the year). Carpenter gives nature's residents, the furry and the not-so-furry, full attention. He also gives them voices that can bring a tear of laughter to the eye. *Tundra* is full of talking snowmen, inept hunters, obsessed fishermen, and inviting wildlife looking for their next meal. It's also packed with an abundance of hilarity. *Tundra: Nature's Favorite Comic Strip* features a "best of" collection with 560 cartoons from over 16 years of

syndication.
