Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment,

and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Nursing Resume: A Job Guide for Nurses LJ Brooks Writing LLC

This collection of true narratives reflects the dynamism and diversity of nurses, who provide the first vital line of patient care. Here, nurses remember their first "sticks," first births, and first deaths, and reflect on what gets them through long, demanding shifts, and keeps them in the profession. The stories reveal many voices from nurses at different stages of their careers: One nurse-in-training longs to be trusted with more "important" procedures, while another questions her ability to care for nursing home residents. An efficient young emergency room nurse finds his life and career irrevocably changed by a car accident. A nurse practitioner wonders whether she has violated professional boundaries in her care for a homeless man with AIDS, and a home care case manager is the sole attendee at a funeral for one of her patients. What connects these stories is the passion and strength of the writers, who struggle against burnout and bureaucracy to serve their patients with skill, empathy, and strength.

Mosby's Textbook for Long-term Care Assistants Jist Publishing

The chapters in Patient Care and Professionalism are ordered so that the main character in this book, the patient, has the first voice, followed by the ancient history of professionalism, the recent resurrection of professionalism in the United Kingdom (UK), and finally professionalism in the United States (US). The eleven chapters cover the various health care professions: medicine, nursing, public health, law, leadership, religion, and finally a chapter on the science of professionalism. The chapters are all written by internationally known experts. The authors share their collective experience to shine light on professionalism from a new angle, revealing the way to a new kind of relationship for patients and physicians of the future—a rebirth of trust borne in real collaboration. The volume begins with a discussion of what is meant by the term 'advocacy' in the practice of medicine, and then offers perspectives on where opportunities for medical advocacy lie, the rich collaborations they engender, and ways to overcome systemic barriers to advocacy.
