According to the commonly held view, early Christianity was a time of great harmony, and heresy emerged only at a later stage. To the contrary, Gerd Ludemann argues that the time from the first Christian communities to the end of the second century was defined by struggle by various groups for doctrinal authority. Drawing on a wealth of data, he asserts that the losers in this struggle actually represented Christianity in its more authentic, original form. Orthodoxy has been defined by the victors in this struggle and it is they who subsequently silenced alternative views and labeled them heretical. Ludemann's findings are important as well as liberating for the understanding of both Christianity and the Bible. Readers will gain a new understanding of Jesus and the early church from this compelling and controversial book.

Remotely sensed data, in the form of digital images captured from spaceborne and airborne platforms, provide a rich analytical and observational source of information about the current status, as well as changes occurring in, on, and around the Earth's surface. The data products, or simply images processed from these platforms, provide an additional advantage in that geographic areas or regions of interest can be revisited on a regular cycle. This revisit cycle allows geospatial analysts and natural resource managers to explore changing conditions over time. Image Processing and Data Analysis with ERDAS IMAGINE® explains the principles behind the processing of remotely sensed data in a simple, easy to understand, and "how-to" format. Organized as a step-by-step guide with exercises adapted from original research and using publicly available imagery, such as NASA Landsat, ESA Sentinel-2, Orthophotos, and others, this book gives readers the ability to quickly gain the practical experience needed to navigate the ERDAS IMAGINE® software as well as learn certain applications in Esri's ArcMap ArcGIS for Desktop software and Quantum the GIS (QGIS) open source applications package. It also helps readers to easily move beyond the information presented in this book and tackle more advanced skills. Written by two professors with long experience in remote sensing and image processing, this book is a useful guide and reference for both undergraduate and graduate students, researchers, instructors, managers, and agency professionals who are involved in the study of Earth systems and the environment.

Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics, and their border fields. It is devoted to the recording, summarizing, and indexing of the relevant publications throughout the world.

Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen-Institut under the auspices of the International Astronomical Union. Volume 43 records literature published in 1987 and received before August 15, 1987. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories, and publishers which provide us with complimentary copies of their publications. Starting with Volume 33, all the recording, correction, and data processing work was done by means of computers. The recording was done by our technical staff members Ms. Helga Ballmann, Ms. Beate Gobel, Ms. Monika Kohl, Ms. Sylvia Matyssek, Ms. Doris Schmitz-Braunstein, Ms. Utta-Barbara Stegemann. Mr. Jochen Heidt and Mr. Kristopher Polzine supported our task by careful proof reading. It is a pleasure to thank them all for their encouragement. Heidelberg, October 1987

A complete tutorial and reference for AutoCAD Civil 3D 2013 Autodesk's Civil 3D is the leading civil engineering software, and this reliable training guide has been thoroughly revised and updated to offer a fresh perspective on this powerful engineering package. Filled with illustrative examples, new datasets, and new tutorials, this book shows how elements of the dynamic engineering program work together and discusses the best methods for creating, editing, displaying, and labeling all of a civil engineering project's elements. The book's straightforward explanations, real-world examples, and practical tutorials focus squarely on teaching vital Civil 3D tips, tricks, and techniques. The authors' extensive real-world experience and Civil 3D expertise allows them to focus on how the software is used in real-world professional environments and present topics and techniques that are not documented elsewhere. Offers an overview of key concepts and the software's interface Discusses the best methods for creating, editing, displaying, and labeling all of a civil engineering project's elements Features in-depth, detailed coverage of surveying, points, alignments, surfaces, profiles, corridors, grading, LandXML and LDT Project Transfer, cross sections, pipe networks, visualization, sheets, and project management, as well as Vault and data shortcuts Offers help for the Civil 3D Certified Associate and Certified Professional exams This book is the only complete, detailed reference and tutorial for Autodesk's extremely popular and robust civil engineering software.

Creo Parametric 8.0 for Designers book is written to help the readers effectively use the modeling and assembly tools by utilizing the parametric approach of Creo Parametric 8.0 effectively. This book provides a detailed description of the tools that are commonly used in modeling, assembly, sheet metal as well as in mold design. This book also covers the latest surfacing techniques like Freestyle and Style with the help of relevant examples and illustrations. The Creo Parametric 8.0 for Designers book further elaborates on the procedure of generating the drawings of a model or assembly, which are used for documentation of a model or assembly. It also includes the concept of Geometric Dimensioning and tolerancing. The examples and tutorials are used in this book to ensure that the users can relate the knowledge of this book with the actual mechanical industry designs. Every chapter begins with a tools section that provides brief information on the Creo Parametric tools. This approach allows the user to use this book initially as a learning tool and then as reference material. Salient Features Consists of 17 chapters with comprehensive coverage of all concepts and techniques Tutorial approach to explain the concepts Detailed explanation of all commands and tools Summarized content on the first page of the topics that are covered in the chapter Hundreds of illustrations and step-by-step instructions for easy understanding Real-world mechanical engineering designs as tutorials and exercises Additional projects for practice Additional information throughout the book in the form of notes and tips Self-Evaluation Tests and Review Questions at the end of the chapters to help the users assess their knowledge Table of Contents Chapter 1: Introduction to Creo Parametric 8.0 Chapter 2: Creating Sketches in the Sketch Mode-I Chapter 3: Creating Sketches in the Sketch Mode-II Chapter 4: Creating Base Features Chapter 5: Datums Chapter 6: Options Aiding Construction of Parts-I Chapter 7: Options Aiding Construction of Parts-II Chapter 8: Options Aiding Construction of Parts-III Chapter 9: Advanced Modeling Tools Chapter 10: Assembly Modeling Chapter 11: Generating, Editing, and Modifying the Drawing Views Chapter 12: Dimensioning the Drawing Views Chapter 13: Other Drawing Options Chapter 14: Working with Sheetmetal Components * Chapter 15: Surface Modeling * Chapter 16: Introduction to Mold Design * Chapter 17: Concepts of Geometric Dimensioning and Tolerancing * Student Projects Index (* For Free Download)

Since the 1990s many different scientific disciplines have intensified their interest in the so called 'mind-body-problem': psychoanalysis, philosophy, academic psychology, cognitive science and modern neuroscience. The conceptualization of how the mind works has changed completely, and this has profound implications for clinical psychoanalytical practice as well as for theorizing in contemporary psychoanalysis. The question of how unconscious fantasies and conflicts, as well as traumatic experiences, can be understood and worked through is, and has been, one of the central topics of psychoanalysis. Interdisciplinary studies from the fields of embodied cognitive science, epigenetics, and cognitive neuroscience offer challenging explanations of the functions in the analysts mind which might allow him to create spontaneous associations through which he unconsciously 'understands' the traumatic, embodied experiences of the patient.

This book focuses on dialog from a varied combination of fields: Linguistics, Philosophy of Language and Computation. It builds on the hypothesis that meaning in human communication arises at the discourse level rather than at the word level. The book offers a complex analytical framework and integration of the central areas of research around human communication. The content revolves around meaning but it also gives evidence of the connection among different points of view. Besides discussing issues of general interest to the field, the book triggers theoretical argumentation that is currently under scientific discussion. It examines such topics as immanent reasoning joined with Recanati's lekta and free enrichment, challenges of internet conversation, inner dialogs, cognition and language, and the relation between assertion and denial. It proposes a dialogical framework for intra-negotiation and gives a geolinguistic perspective on spoken discourse. Finally, it examines dialog and abduction and sheds light on a generation of dialog contexts by means of multimodal logic applied to speech acts.

In 2012, the ERASMUS programme celebrated its 25th anniversary. As one of the best-known initiatives of the EU, it has already enabled almost three million students to spend a part of their studies abroad. But ERASMUS is more than just a simple academic exchange programme: designed

to contribute to the creation of a «People's Europe», it has become a successful political instrument for shaping generations of European students. This interdisciplinary volume attempts to explain the fascination behind ERASMUS. The authors examine the role of student mobility within the European integration process and judge its impact on how young citizens identify with Europe. Is there a «Generation ERASMUS», and what characteristics does it have? Can ERASMUS serve as a symbol for «new» Europeans?

Othmar Keel has become well known as the author of masterly studies on the iconography and texts of the ANE and their relationship to the text of the Hebrew Bible. In this volume, he partners with Silvia Schroer to assemble ANE texts and art that bears on the idea of creation. The result is a convenient assemblage of texts and iconographical data that may be studied in concert, often leading to being able to see old texts in new ways. As with much of this Swiss scholar's work, this new volume will prove to be a resource for all who wish to study the biblical theology of creation against its wider background.

While reproduction is fairly often touched upon in theological and Christian ethical discussions, reproductive health is not. However, reproductive health is a matter of theological and ethical concern. Discussion pertaining to reproductive health includes a number of debates about, for instance, abortion and the termination of pregnancy, reproductive loss, childlessness, infertility, stillbirth, miscarriage and adoption. Additionally, new reproductive possibilities made available by the development of reproductive technology have necessitated theological and ethical reflection on, for example, surrogacy, post-menopausal pregnancies, litter births, single mothers or fathers by

choice, in vitro fertilisation and the so-called saviour siblings. These new developments compel us to reconceive our notions of what reproductive health is or should be. Many of these topics are receiving increasing attention in a variety of theological publications. The focus of this volume is unique, however, and to the best of our knowledge, this is the first volume dealing not only with reproductive issues, but also reflecting theologically and ethically on reproductive health. It makes a contribution by providing a variety of perspectives from different theological fields on this theme, and in many chapters, focussing especially on the South African context. These discussions are also part of urgent debates within churches, which require developing life-giving theological language and imaginative theological alternatives that may speak to experiences of matters relating to reproductive health. The popular books, TV series and films that touch upon these discussions – including *The Handmaid's Tale* and *Mother!* – strengthen the perception that a more in-depth theological and ethical discussion on the theme may be necessary, particularly towards exploring stories and confessions from our faith tradition that may provide us with a timely opportunity to do the important work of theological "reconceiving".

Operation Barbarossa, the German invasion of the Soviet Union, began the largest and most costly campaign in military history. Its failure was a key turning point of the Second World War. The

operation was planned as a Blitzkrieg to win Germany its Lebensraum in the east, and the summer of 1941 is well-known for the German army's unprecedented victories and advances. Yet the German Blitzkrieg depended almost entirely upon the motorised Panzer groups, particularly those of Army Group Centre. Using archival records, in this book David Stahel presents a history of Germany's summer campaign from the perspective of the two largest and most powerful Panzer groups on the Eastern front. Stahel's research provides a fundamental reassessment of Germany's war against the Soviet Union, highlighting the prodigious internal problems of the vital Panzer forces and revealing that their demise in the earliest phase of the war undermined the whole German invasion.
