"Compassionate, groundbreaking, and urgently needed, Stand By Me provides caregivers with new ways to juggle the responsibilities and emotional ups and downs of caregiving. As the founder of the only devoted Caregivers Clinic in the country, clinical psychologist Dr. Allison Applebaum is no stranger to the intensity of being an unpaid, untrained family caregiver. She also understands that it is often the strength and well-being of these very caregivers-the parents, children, partners, siblings, and friends of patients-that are the true linchpin determining each patient's illness experience. This book puts the practical tools and transformative support of the Caregivers Clinic in your hands, empowering you to provide your loved one with the best quality of life and care possible, while promoting your own wellbeing. The book covers crucial topics including: -Getting the most from any healthcare system -Productive advance care planning -Navigating changing roles and relationship dynamics -Finding meaning and purpose in the caregiving experience Stand By Me draws on a decade of clinical and research experience as well as Dr. Applebaum's personal journey as the primary caregiver for her own father, legendary composer Stanley Applebaum, at the end of his life. Dr. Applebaum recognizes caregivers for who they truly are: invaluable healthcare team members. Offering critical insight and takeaways, Stand By Me is an essential resource throughout your caregiving journey"-

This collection revisits classical anthropological treatments of the gift by documenting how people may be valued both through the requests they make and through what they give. Many humanitarian practitioners, the authors propose, regard giving to those in need as the epitome of moral action but are liable to view those people's requests for charity as merely utilitarian. Yet in many religious discourses, prayers and requests for alms are highly valued as moral acts, obligatory for establishing relationships with the divine. Framing the moral qualities of asking and giving in conjunction with each other, the contributors explore the generation of trust and mistrust, the politics of charity and accountability, and tensions between universalism and particularism in religious philanthropy.

Transplantation has succeeded in prolonging the lives of those fortunate enough to have received the gift of a body organ. Alongside this life-saving development, there lies another sadder side to the story - there are not enough organs to meet the ever increasing demand. This not only places an increasing emotional and physical burden among the waiting patients and families but heaps a great

financial burden upon health services. This book provides an analysis and overview of public policy developments and clinical developments that will hopefully ensure an increased availability of organs and greater graft survival. Medical, policy, and academic experts from around the world have contributed chapters to the book.

Like the majority of institutions in America, the U.S. Postal Service policy, practice, and/or procedure appear neutral. Truthfully, it has a disproportionately negative impact on members of a racial or ethnic minority group. Dr. Martin Luther King, Jr., once said, "An injustice anywhere is an injustice everywhere!" Inequalities, regardless of their bases should not be swept under the rug. Any discrimination is intolerable, and as citizens, we must all make a serious attempt to do away with it. If we remain docile and inactive, the disparity will continue to grow, and our great nation, no doubt, will diminish to irrelevancy. America is a great nation; however, let's not forget that her strength is built on hope, faith, and all honesty through free labor of slaves. Today, racial disparity affects both the innocent and guilty minority. Our judicial system is in urgent need of reform. Our nation is confronted with serious moral, ethical, constitutional, and economic challenges. We have to work together for systematic changes. This book/documentary validate that as a race of people, we are still plagued with persistent racial disparities—systematic racism which causes serious physical as well as psychological consequences. It discloses judicial tyranny and the corruption of the justice system by way of consistent psychological manipulation and deception, and unconstitutional laws that infringes on minorities' and pro se litigants' rights. Like cancer, racism has the potential to destroy!

Despite starting slowly with some academic jargon about altruism and people's motivations to donate organs, the book quickly takes a right turn and gets interesting. The authors sprinkle little informative tidbits along the way-Asian-Americans constituted only 3.4% of U.S. donors-and bring their points alive through little vignettes when examining the origins of altruism. The authors would make brilliant sales reps: they put forth a convincing argument about what a great humanitarian effort living donation is then patiently explain the evaluation process to reassure readers of the minimal costs. The few downsides are reviewed and discussed-for example, how to deal with family members who do not support the decision to donate or the devastation donors might experience when a recipient dies. Resources, bibliography, and index occupy a full 36 pages, yet for the most part this book escapes the drudgery of a research-laden study and instead reads as a fascinating story about a very human issue. The Organ Donor Experience Nolo

This book is a compilation of common and uncommon surgical and ancillary techniques that we have found useful in the multiorgan transplantation program at the University of Minnesota. Descriptions of these techniques are not available at a single source elsewhere. Use the book as a teaching aid, a

source of workable techniques, and as a reference for individuals with relatively little experience in a particular area of transplantation. Because of the varying levels of expertise of our readers, vascular access is described in exquisite detail, as it is aimed at an audience of individuals who want to learn the fine points about how to prolong the function of shunts. The chapter on organ preservation is aimed at the surgeon or beginning technician who must learn how to do it from scratch—even the catalogue numbers of the necessary equipment are included. In contrast the chapters on heart, liver, and pancreas transplantation, while omitting fine points of suture technique, concentrate on the essential principles and safeguards. Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique. The chapters on cadaver organ donation are perhaps the most innovative. They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation. We hope that the book will become available to centers that, while not performing liver, pancreas, or heart transplants, wish to serve as donation centers.

Since its inception in 1968, the brain-death criterion for human death has enjoyed the status of one of the few relatively well-settled issues in bioethics. However, over the last fifteen years or so, a growing number of experts in medicine, philosophy, and religion have come to regard brain death as an untenable criterion for the determination of death. Given that the debate about brain death has occupied a relatively small group of professionals, few are aware that brain death fails to correspond to any coherent biological or philosophical conception of death. This is significant, for if the brain-dead are not dead, then the removal of their vital organs for transplantation is the direct cause of their deaths, and a violation of the Dead Donor Rule. This unique monograph synthesizes the social, legal, medical, religious, and philosophical problems inherent in current social policy allowing for organ donation under the brain-death criterion. In so doing, this bioethical appraisal offers a provocative investigation of the ethical quandaries inherent in the way transplantable organs are currently procured. Drawing together these multidisciplinary threads, this book advocates the abandonment of the brain-death criterion in light of its adverse failures, and concludes by laying the groundwork for a new policy of death in an effort to further the good of organ donation and transplantation.

What employers must know about FMLA leave for both on-site and remote workers The federal Family and Medical Leave Act (FMLA) helps workers balance the demands of work, family, and personal care. But for employers, knowing how to apply this law fairly and legally can be difficult—especially when it comes to tracking intermittent leave, completing the proper paperwork, and determining eligibility for different types of leave. What's more, related and sometimes overlapping workers' compensation statutes and state leave laws add complexity, such that any misstep can create frustration for both managers and employees. This book provides answers—in plain English—to every employer's tough questions about the FMLA. It provides detailed information, sample forms, and checklists and other tools to help company managers and human resources personnel figure out: • who is eligible for leave • what types of leave are covered • how much leave individual employees may take, and • how to comply with notice and other paperwork requirements. This indispensable guide, from experienced employment law attorneys, has already helped thousands of companies learn how to respect employees' rights while simultaneously protecting their business interests. The 7th edition includes changes to state family and medical leave laws and new material on handling leave requests by remote workers.

The Request and the Gift in Religious and Humanitarian Endeavors

In Surrogacy and Embryo, Sperm, & Egg Donation: What Were You Thinking?, an attorney who practices exclusively in reproductive law shares her expert guidance for those ready to create a family via third-party reproduction. Theresa Erickson, managing partner of Erickson Law, APLC, and the Founder and Chair of Conceptual Options, The Surrogacy and Egg Donation Center, educates and guides parents, surrogates, egg donors, sperm donors, and embryo donors through fertility, infertility, IVF, and third-party reproduction. Erickson includes a glossary of terms, a list of recommended reading for both parents and their children, and legal forms while covering a multitude of relatable topics such as the: Top ten myths of third-party family building History of reproduction technologies Ways to begin the process Ethical and legal issues Questions to ask when building a family the nontraditional way Methods to select a physician and attorney Four fertility options Infertility is a global tragedy that no one should have to endure alone. This guidebook provides valuable information for anyone ready to embark on the journey of becoming parents through third-party reproduction.
