HICKS CHAMBERS

Netter's Cardiology E-Book Pharmaceutical Press

Detailed, step-by-step instructions and abundant full-color illustrations make MacDonald's Atlas of Procedures in Neonatology, Sixth Edition, an indispensable resource in the neonatal intensive care nursery. This unique reference uses a practical outline format to present clear, easy-to-follow information on indications, preparation, technique, precautions, and how to avoid potential complications. New chapters, new procedural content, and new videos bring you fully up to date with current practice in the NICU.

Discovering Theory in Clinical Practice John Wiley & Sons

The second, fully updated edition of this book applies and contextualizes up-to-date information on pediatric surgery for low and middle-income countries (LMICs). The book is organized in general anatomic and thematic sections within pediatric surgery, such as urology, oncology, orthopedics

and gastroenterology and includes chapters addressing the unique challenges and approaches for pediatric surgery in low-resource settings. Each chapter has dual authorship LMIC author providing context-specific insights and authors from high-income countries (HICs) contributing experience from well-resourced settings. Written in a reader-friendly format, this book has a uniform structure in each chapter, with introduction, demographics, etiology, pathophysiology, clinical presentations, investigations, management, outcome, prevention, ethics, evidence-based surgery and references. This comprehensive volume fills the gap between up-to-date pediatric surgical scholarship and knowledge developed and applied in HICs, and the practical needs of practitioners in low-resource settings. This is an indispensable guide for postgraduate surgical trainees in Africa and other LMICs as well as general surgeons practicing in Africa and other LMICs, who need to care surgically for children.

Pediatric Surgery Oxford University Press, USA

Thoroughly revised and updated, the fifth edition of this prize-winning title retains the high level of illustration and accessibility that has made it so popular worldwide with medical students and

trainees approaching clinical specialty exams. Illustrated Textbook of Paediatrics has been translated into eight languages over its life. - Case studies. - Summary boxes. - Tips for patient education. - Highly illustrated with 100s of colour images. - Diseases consistently presented by Clinical features; Investigations; Management; Prognosis; and, where appropriate, Prevention. Separate chapters on - Accidents - Child protection - Diabetes and endocrinology - Inborn Errors of Metabolism New chapter on Global child health New co-editor, Will Carroll, Chair of MRCPC Theory Examinations.

Atlas of Procedures in Neonatology Lippincott Williams & Wilkins

Perfect for residents, generalists, anesthesiologists, emergency department physicians, medical students, nurses, and other healthcare professionals who need a practical, working knowledge of cardiology, Netter's Cardiology, 3rd Edition, provides a concise overview of cardiovascular disease highlighted by unique, memorable Netter illustrations. This superb visual resource showcases the well-known work of Frank H. Netter, MD, and his successor, Carlos Machado, MD, a cardiologist who has created clear, full-color illustrations in the Netter tradition. New features and all-new

chapters keep you up to date with the latest information in the field. - Includes 13 all-new chapters: Basic Anatomy and Embryology of the Heart, Stem Cell Therapies for Cardiovascular Disease, Diabetes and Cardiovascular Events, Clinical Presentation of Adults with Congenital Heart Disease, Transcatheter Aortic Valve Replacement, Deep Vein Thrombosis and Pulmonary Embolism, and more. - Features new coverage of 3-D TEE imaging for structural heart procedures. - Contains color-coded diagnostic and therapeutic algorithms and clinical pathways. - Uses an easy-to-follow, templated format, covering etiology, pathogenesis, clinical presentation, diagnostic approach, and management/therapy for each topic. - Offers dependable clinical advice from Drs. George A. Stouffer, Marschall S. Runge, Cam Patterson, and Joseph S. Rossi, as well as many world-renowned chapter contributors.

Pediatric Nursing Churchill Livingstone

'The very last thing a drug regulator wishes to be able to say is, like Lord Byron (1788-1824), on the publication of his poem Childe Harold's Pilgrimage, 'I awoke one morning and found myself famous.' The twelfth edition of this long-established textbook of clinical pharmacology (first published in 1960) continues its fine tradition of balancing science and practice for improved evidence-based drug therapy and good prescribing in therapeutic settings increasingly complicated by intercurrent disease and polypharmacy. - Coverage of all major therapeutic topics by body system. - Introductory sections give brief chapter synopses. - Case studies where relevant. - Covers the needs of the developing world with a focus on practical prescribing and health technology assessment. - Definition, tips, brief explanation boxes throughout. - Interesting histories, etymologies and provenances of terms throughout. - Entertaining footnotes throughout. - Fully updated throughout. - New co-editor: Fraz Mir, Addenbrooke's Hospital and Department of Medicine, University of Cambridge. - Now with free e-book on StudentConsult.

Essential Revision Notes in Paediatrics for the MRCPCH Elsevier Australia

Whereas other textbooks mix a clinical approach with large amounts of the basic science of gastroenterology, this book concentrates on providing practicing gastroenterologists with 100% clinically focused, evidence-based chapters on how to correctly diagnosis and treat all disorders of the digestive tract. Once again, the book is divided into 4 clear parts: Symptoms, Syndromes and Scenarios; Diseases of the Gut and Liver; Primer of Diagnostic Methods; and Primer of Treatments. An accompanying website contains more than 85 high-definition surgical videos of diagnostic and therapeutic endoscopic procedures, 300 MCQs written to mirror the American College of Gastroenterology postgraduate course exams, more than 35 management protocol charts for different diseases, and 850+ illustrations for use in scientific presentations.

Palliative Care for Chronic Cancer Patients in the Community Royal College of Physicians

The gold-standard text in pediatric hospital medicine – updated and streamlined for today's practice Hailed by reviewers and clinicians alike, Comprehensive Pediatric Hospital Medicine has become the specialty's cornerstone text. Edited by five leading figures in pediatric hospital medicine, this acclaimed resource brings you the most up-to-date, evidence-based approaches to inpatient pediatric care from experts in their fields. Comprehensive Pediatric Hospital Medicine, Second Edition opens with an informative introductory section that defines hospital medicine and addresses general issues of hospitalist practice and administration. This includes important topics such as medical legal issues, communications, electronic health records, palliative care, ethical issues, careers, professional organizations, and more. The book then moves into commonly presenting signs and symptoms. This is followed by the largest section, a breakdown of diseases by system. The text concludes with a procedures section that provides hard-to-find instruction on the procedures most commonly performed on children in a hospital setting. The Disease chapters are templated to include Background, Pathophysiology, Differential Diagnosis, Diagnostic Evaluation, Management, Special Considerations, Key Points, References, algorithms, and more. The Procedures chapters include Indications, Contraindications, Anatomy, Equipment, Procedure, Preparation, Technique, Complications, and Special Considerations. If you're in need of an up-to-date, comprehensive, and authoritative text that spans the emerging field of pediatric hospital medicine, your search ends here.

Toxicology Handbook JP Medical Ltd

Orphan drugs are designated drug substances that are intended to treat rare or 'orphan' diseases. More than 7000 rare diseases are known that collectively affect some 6-7% of the developed world's population; however, individually, any single, rare disease may only affect a handful of people making them commercially unattractive for the biopharmaceutical industry to target. Ground breaking legislation, starting with the Orphan Drug Act that was passed in the US in 1983

to provide financial incentives for companies to develop orphan drugs, has sparked ever increasing interest from biopharmaceutical companies to tackle rare diseases. These developments have made rare diseases, and the orphan drugs that treat them, sufficiently attractive to pharmaceutical development and many pharmaceutical companies now have research units dedicated to this area of research. It is therefore timely to review the area of orphan drugs and some of the basic science, drug discovery and regulatory factors that underpin this important, and growing, area of biomedical research. Written by a combination of academic and industry experts working in the field, this text brings together expert authors in the regulatory, drug development, genetics, biochemistry, patient advocacy group, medicinal chemistry and commercial domains to create a unique and timely reference for all biomedical researchers interested in finding out more about orphan drugs and the rare diseases they treat. Providing an up-to-date monograph, this book covers the basic science, drug discovery and regulatory elements behind orphan drugs and will appeal to medicinal and pharmaceutical chemists, biochemists and anyone working within the fields of rare disease research and drug development or pharmaceuticals in industry or academia.

MacDonald's Atlas of Procedures in Neonatology Lippincott Williams & Wilkins

Many of the systemic autoimmune diseases seen in children are different from those seen in adults making them a special problem for physicians and scientists who care for the affected children and study their diseases. Benefiting both pediatric and adult rheumatologists, as well as physicians from other specialties, this volume covers the latest advances in pathogenesis and clinical management of common conditions seen in pediatric rheumatology practices.

Human Embryology Springer Nature

The new global cancer data suggests that the global burden has risen to 18.1 million new cases per year and 9.6 million cancer deaths per year. A number of factors appear to be driving this increase, in particular, a growing and aging global population and an increase of exposure to cancer risk factors linked to social and economic development. For rapidly-growing economies, the data suggests a shift from poverty- or infection-related cancers to those associated with lifestyles more typical in industrialized countries. There is still large geographical diversity in cancer occurrence and variations in the magnitude and profile of the disease between and within world regions. There are specific types of cancer that dominate globally: lung, female breast and colorectal cancer, and the regional variations in common cancer types signal the extent to which societal, economic and lifestyle changes interplay to differentially impact on the profile of this most complex group of diseases. Unfortunately, despite advances in cancer care, a significant proportion of patients at home, experience sub-optimal outcomes. Barriers to successful treatment outcomes include, but are not limited to: access to oncologists in the primary health centers, non-adherence, lack of experienced oncology and palliative care nurses in the community, inadequate monitoring and the lack of training of family and pediatric physicians. Telemedicine approaches, including telephone triage/education, telemonitoring, teleconsultation and status tracking through mobile applications, have shown promise in further improving outcomes, in particular for chronic cancer patients following their hospitalization. Lessons can be learned from existing hospices in North America, the United Kingdom, Australia, Centers of Excellence in African (Uganda) and modern community services in India (Kerala). An important goal of this book is to describe and encourage professionals to develop new community programs in palliative care, which include training and empowering physicians and nurses in the community on the principles of palliative care. The Middle East Cancer Consortium (MECC) together with the American Society of Clinical Oncology (ASCO) and the American Oncology Nursing Society (ONS) have conducted multiple courses ranging from basic palliative care to more specialized training in palliative care for multiple nationalities in Europe, Asia and Africa. Our experience clearly indicates that, to promote such activities, one needs strong leadership and confirmed political will to support the endeavor. The new book will emphasize the importance of having a core of multiple stakeholders including community leaders, government, NGOs and media to be actively involved in advocating for the cause and generating public awareness. This text will provide the reader with a comprehensive understanding of the outside-of-the-hospital treatment of cancer patients by medical, paramedical and volunteer personnel. In doing so, this text will encourage the creation of new palliative care services improving upon the existing ones and stimulate further research in this field. Part 1 of the text will begin with an overview of the current state of affairs of services provided to cancer patients while being cared for by primary health centers. It will also review the current literature regarding medical and psychological-based therapy options in the community for cancer patients at different stages of their disease. Part 2 will address the unique role of the community nurse,

within the framework of the multidisciplinary team treating the patient, in the attempt to provide optimal evaluation and care in very challenging situations (such as with terminal patients). Part 3 will provide insightful models of this new discipline and serve as a valuable resource for physicians, nurses, social workers and others involved in the care of cancer patients. The book will take a multidisciplinary approach, integrating clinical and environmental data for practical management to enhance the efficacy of treatment while relieving suffering. Part 4 will also discuss the application of modern technological approaches to track symptoms, quality of life, diet, mobility, duration of sleep and medication use (including pain killers) in chronic cancer patients in the community. Part 5 of the book will also be devoted to modes of developing a collaborative program between governmental and non-governmental organization sectors. This includes volunteer workers in close collaboration with medical professionals for providing emotional and spiritual support, nursing care, nutritional support and empowering family caregivers. Such a model makes palliative care in the community a "people's movement", thus transferring part of the responsibility and ownership to the community.

Illustrated Textbook of Paediatrics Lippincott Williams & Wilkins

This invaluable textbook, written by international experts, covers all the main elements of forensic toxicology and analytical toxicology techniques as well as the important parts of pharmacokinetics, drug metabolism, and pharmacology in general, with a particular focus on drugs of abuse.

Case Studies in Immunology Royal Society of Chemistry

Suitable for candidates preparing for the MRCPCH exam, this title includes 24 specialty-based chapters that provide concise information in an accessible format.

Children with Neurological Disorders Lippincott Williams & Wilkins

A concise and helpful addition to any students library featuring chapters on paediatric development, genetics, respiratory system, neurology and much more.

Chronic Diarrhea in Children Springer Nature

This book on rheumatology in children is intended to be a handy tool for all professionals interested in this field. It is divided into five sections: General considerations, arthritic problems, connective tissue diseases, systemic vasculitides and finally a section that covers miscellaneous issues such as Immunodeficiencies, bone health and uveitis. The book has an easy format with each chapter having one or more clinical vignettes at the start of the chapter. In addition each chapter outlines the learning objectives and key take home messages. At the end of each section a collection of cases to highlight important issues in the clinic are included. The colorful charts, pictures and tables make reading this book an easy task. The authors are leading experts in their fields working at best practices centers globally to provide the reader with state-of-the-art information.

The Science of Paediatrics: MRCPCH Mastercourse Springer

All of the field's must-have information is delivered in an easy-to-grasp, visually clear and precise design.

Burton's Microbiology for the Health Sciences Elsevier Health Sciences

Fully revised for the new edition, this handbook covers all significant aspects of acute and chronic paediatrics. Areas such as neonatology, surgery, genetics and congenital malformations and child protection are covered in a user-friendly and succinct style.

Oxford Handbook of Paediatrics Oxford University Press, USA

This volume in the Content Review Plus Practice Series polishes your knowledge of pediatric nursing while sharpening your critical thinking and test-taking skills. Each chapter offers a concise, yet comprehensive review of the topic, followed by NCLEX-style questions in both multiple-choice and alternate-item formats. Rationales for both correct and incorrect answers, as well as test-taking tips, explain how to apply critical thinking to the question types—great preparation for classroom exams and the NCLEX-RN® Exam.

The Developing Microbiome OUP Oxford

This book presents a comprehensive overview of pediatric thyroid diseases and thus provides a useful tool for clinical problem solving. Opinion leaders in the field present reviews on all relevant diseases of the hypothalamic-pituitary-thyroid axis. Sixteen chapters cover topics ranging from fetal thyroidology, congenital hypothyroidism, central hypothyroidism, inherited defects of thyroid hormone action, cell transport and metabolism to iodine deficiency, autoimmune thyroid disease and thyroid tumors. Written by clinicians, the chapters provide in-depth information and current guidelines for clinical problems encountered in pediatric thyroidology. As a unique feature, a case seminar collection for each chapter presents typical patient histories providing key learning points

and key references for clinical problem solving in family medicine, pediatric endocrinology and medical genetics. Providing a succinct update on clinical pediatric thyroidology, this book is an essential tool for pediatric and adult endocrinologists, as well as for general practitioners, pediatricians and medical geneticists.

Clarke's Analytical Forensic Toxicology Lippincott Williams & Wilkins

Cancer is diagnosed in about 140 per million children in Britain each year. There is a 1 in 500 chance that a child will be affected in the first 15 years of life, the most frequently occurring types of cancer being leukaemia and brain tumours. This book covers the descriptive epidemiology of childhood cancer in Britain, based on the unique work of the National Registry of Childhood Tumours, the largest population-based specialist childhood cancer registry in the world. The book provides a detailed account of national incidence and survival rates for childhood cancer in Britain during 1991-2000, and trends during 1966-2000. There is also an account of childhood mortality

for the period 1965-2004. The diagnoses are classified throughout according to the International Classification of Childhood Cancer, the first time the third edition of this standard classification has been used for prevalence of incidence, survival and mortality data. The chapter on incidence rates is relevant to planning of health service provision and design of research studies on aetiology, whilst the chapter on trends in incidence is relevant to the possible effects of changes in environmental and other risk factors. In addition to comprehensive tables of rates, age-incidence graphs are provided for all the major types of childhood cancer, and possible artefacts are also discussed. The survival data demonstrates how clinical progress over the past 40 years has led to a major increase in the number of cancer survivors. The role of the Registry, covering history, methodology, current and future uses, is also discussed. This definitive work is the culmination of decades of epidemiological research and is essential reading for anyone involved in paediatric

oncology or cancer epidemiology.

Pediatrics in Systemic Autoimmune Diseases LWW

This text covers new innovations and concepts in pediatric thoracic surgery practice, basic science and evidence, and the technical aspects of common and rare operative procedures. It is essential for pediatric surgical trainees and consultants with interest in pediatric thoracic surgery. Providing comprehensive coverage of newer developments, it is also a useful reference work for pediatric and thoracic surgeons and a valuable guide for surgeons (adult or pediatric) managing pediatric thoracic surgery on occasional basis or only during acute emergency. Covering the subjects within pediatric thoracic surgery (non-cardiac) in significant depth, this book acts as a reference text for consultants undertaking pediatric thoracic work as well as for pediatric respiratory, anesthetists and fetal medicine doctors. Topics within this book will also be of interest to pediatric respiratory physicians and pediatric oncologists.
