 Parmana: Prehistoric Maize and Manioc Subsistence along the Amazon and Orinoco argues for a reinterpretation of prehistoric subsistence in the Greater Amazonian region of South America. Based on the preliminary results of an archaeological fieldwork in Parmana of the Orinoco basin, Venezuela, the book re-evaluates some of the assumptions made by anthropologists about human adaptation and the development of aboriginal culture in Amazonia. Comprised of six chapters, this volume begins with a review of the theories of five scholars of aboriginal Amazonia in terms of logic and documentation: Julian Steward, Betty Meggers, Robert Carneiro, Donald Lathrap, and Daniel Gross. The next chapter presents an alternative theory, the hypothesis of technological change, and explains its theoretical framework. The demographic theory of cultural evolution is discussed, and its basis in general evolutionary theory is explained. Subsequent chapters focus on the empirical evidence for the hypothesis in studies of tropical resources, with emphasis on the productivity of tropical lowland soils and Amazonian faunal resources as well as the roles of maize and manioc in prehistoric Amazonian subsistence; the physical and biological characteristics of the Parmana region as an environment for prehistoric human adaptation; and the history of subsistence and population growth in prehistoric Parmana. The final chapter suggests possible directions for future research on the development of aboriginal culture in Amazonia. The book is illustrated with numerous maps, tables, and photographs, most of them never published before. This monograph should be of interest to archaeologists and anthropologists.

 Experienced by more than one billion people worldwide, disability is increasingly recognised as a human rights issue internationally. Completely up to date, *Disability and Human Rights* draws on cutting edge international research and real life examples to explore the global dimension of disability and to critically review progress on the implementation of the United Nations Convention on the Rights of Persons with Disabilities. This book provides readers with an in-depth exploration of disability across key areas

of hu-man rights, including health, education, employment, accessibility and independent living. It demonstrates how these issues are integral to achieving full and equal participation of disabled people in human societies across the life cycle. The book analyses the impact of poverty, the importance of support and the relevance of culture and it maps out how to make disability rights a reality in the coming decades. Chapters are enriched with a wide range of international case examples and questions for reflection to deepen readers' understanding of the material. Students and practitioners from a wide range of backgrounds, including disability studies, human rights, social work and social care will benefit from this much-needed new global perspective on disability.

 This is the second of two volumes deriving from papers presented at the Nineteenth Annual UWM linguistics Symposium held in Milwaukee in 1990. It focuses on the evolution of grammatical form and meaning from lexical material, which has reinvigorated historical analysis and theory and led to advances in the understanding of the relation between diachrony and universals. The richness and potential of some of the leading approaches to grammaticalization are here illustrated in thirteen selected papers.

 This study traces the emergence and dissemination of Aryanism within the British Empire. The idea of an Aryan race became an important feature of imperial culture in the nineteenth century, feeding into debates in Britain, Ireland, India, and the Pacific. The global reach of the Aryan idea reflected the complex networks that enabled the global reach of British Imperialism. Tony Ballantyne charts the shifting meanings of Aryanism within these 'webs' of Empire.

 While the civil rights movement has put disability issues centre-stage, there has been minimal discussion of disabled people's sexuality. This book, based on first-hand accounts, takes a close look at questions of identity, relationships, sex, love, parenting and abuse and demolishes the taboo around disability and sex. It shows the barriers to disabled people's sexual rights and sexual expression, and also the ways in which these obstacles are being challenged. Viciously moving, angry, funny and proud, *The Sexual Politics of Disability* is about disabled people sharing their stories and claiming their place as sexual beings. It is a pioneering work, and essential reading for anyone interested in disability or sexual politics.

 The revised Third Edition of *The Prokaryotes*, acclaimed as a classic reference in the field, offers new and updated articles by experts from around the world on taxa of relevance to medicine, ecology and industry. Entries combine phylogenetic and systematic data with insights into genetics, physiology and application. Existing entries have been revised to incorporate rapid progress and technological innovation. The new edition improves on the lucid presentation, logical layout and abundance of illustrations that readers rely on, adding color illustration throughout. Expanded to seven volumes in its print form, the new edition adds a new, searchable online version.

Genealogical Fictions examines how the state, church, Inquisition, and other institutions in colonial Mexico used the Spanish notion of *limpieza de sangre* (purity of blood) over time and how the concept's enduring religious, genealogical, and gendered meanings came to shape the region's patriotic and racial ideologies.

Marginality does not mean isolation. In Africa where people are permanently on the move in search, *inter alia*, of a better elsewhere, marginality means disconnection to obvious possibilities and the invisibility of the myriad connections that make life possible for the ordinarily sidestepped. This book is about the workings of networks of the mobile in Africa, a continent usually associated with the global shadows of the world. How do changes in the possibilities for communication, with the recent hype of mobile technology, influence the social and economic dynamics in Africa's mobile margins? To what extent is the freedom associated with new Information and Communication Technologies reality or disillusion for people dwelling in the margins? Are ordinary Africans increasingly Side@Ways? How

social are these emergent Side@Ways? Contributions to answering these and related questions are harvested from ethnographic insights by team members of the WOTRO funded Mobile Africa revisited research programme hosted by the African Studies Centre, Leiden, The Netherlands.
