Obesity and Health America Star Books

When CL Watson discovers that her brother, Carter, has topped 400 pounds and can no longer bathe himself, she decides to do something to save him. By turns hilarious, insightful, and moving, CL's true story about trying to save her brother from obesity is a journey into the very meaning of self-esteem. As children of alcoholics, CL and her brother are both at risk for addiction and depression. Even more frightening, CL's two boys are at risk, as well. "Addiction in the family is a cold shiver in the genes," says CL Watson, "and the question sits in my consciousness like a cocked gun: Will I find a way to break the cycle?" EATING THE SHADOW tells the story of how we consume illusion in search of nourishment, and how we discover healing in truth.

This book was written to help you avoid heart disease and PBS. If it's already too late to avoid these problems, this book can help you recover. The first few chapters explain how common germs cause heart disease and raise cortisol levels. Beginning with Chapter 6, the emphasis shifts toward cortisol-related illnesses: high blood pressure, obesity, and type 2 diabetes. The Potbelly Syndrome The Rosen Publishing Group, Inc
Experts now predict that more than one-third of American children born in 2000 will develop diabetes in their lifetime. Written by one of the world's leading authorities on the link between obesity and diabetes, this passionate, frightening-but ultimately hopeful-book points the way to a solution. To enter Dr. Francine Kaufman's clinic is to see the future of America: a 220-pound twelve-year-old boy...a 267-pound thirteen-year-old girl...their concerned but equally overweight parents...the human faces and human suffering behind the epidemic of type 2 diabetes that threatens to overwhelm our health care system. Once a disease of the elderly, type 2 diabetes now strikes adults in their prime-and, increasingly, children. It has nearly doubled in the last decade. The cause? Our soaring rates of obesity. Diabetes takes us to the front lines of the fight against this preventable but deadly disease. Through vivid patient stories, it explains how excess weight destroys the body's ability to process sugar properly-with life-threatening consequences. It shows what happens when the genes that evolved to protect us from famine collide with a sedentary lifestyle that has put bacon cheeseburgers on every corner. And it demonstrates why our usual blame-the-victim response is futile in face of the complex, worldwide forces behind this epidemic. Detailing the tools for change at every level-from families to school systems to government-and reporting on innovative programs that are already making a difference, Diabetes offers a compelling action plan for winning this battle.

Dr. Edward Eaton Mason, MD, Ph.D., FACS, the "Father of Obesity Surgery," writes about his remarkable life on his 100th birthday. Born in a taxi cab in Boise, Idaho, on October 16, 1920, the year women got the right to vote, his mother Dora Mason decided one child was enough. She was a teacher and sculptress who created the original Nile Kinnick bust. His father, Edward F. Mason, was a professor of photojournalism at the U. of Iowa. Raised by teacher parents, Ed became a professor of surgery at the U. of Iowa, training thousands of medical students and surgeons. He did research in 1965 with Dr. Chikashi Ito from Japan to treat peptic ulcer disease with gastric bypass surgery. His discovery that peptic ulcer disease was not helped, but his patients lost weight, led to his discovery of obesity surgery. Also, this surgery could treat Type-2 diabetes by weight loss and dumping food containing glucose directly to the small intestine, resulting in the release of GLP-1 hormones. Severe obesity was an epidemic disease resulting in heart ailments, high blood pressure, diabetes, cancer, arthritis, and strokes. His surgery rescued the morbidly obese patients.

Until we perceive our bodies as the temple of God; satan will continue to come against us through a gluttonous spirit. It is his pleasure to see the people of God plagued with obesity, sickness, and diseases. And when he has crippled this powerful nation, the cry unto heaven will be great. We must obey the words of our Lord and Savior Jesus Christ and live: Take heed to yourselves, lest at anytime your heart be overcharged (overworked) with surfeiting (overeating) and the cares of this life. And that day (of sickness and disease) come upon you unawares (without warning). For as a trap shall it come on all them that dwell on the whole earth . Luke 21:34. Obesity, sickness, and disease has no respect of person. The great and the small shall die an untimely death in this great nation if we do not take a stand against these deadly plagues. As far back as I can remember, Obesity rest, ruled, and abide over me and continued to do so well into my adulthood. At the age of 55 obesity and it's related diseases took it's toil on my body; thus sickness came upon me like a thief in

the night, robbing me of my quality of life. Through dreams and visions from the word of God, I learn how to program my mind to succeed and overcome a gluttonous spirit. Today my will to live is far greater than my foolishness to die. I tell of my uphill journey to recovery in this powerful book.

The Adipocyte and Obesity Obesity: The Biography

ONE OF NPR'S BEST BOOKS OF 2019 A "warm and funny and honest...genuinely unputdownable" (Curtis Sittenfeld) memoir chronicling what it's like to live in today's world as a fat man, from acclaimed journalist Tommy Tomlinson, who, as he neared the age of fifty, weighed 460 pounds and decided he had to change his life. When he was almost fifty years old, Tommy Tomlinson weighed an astonishing—and dangerous—460 pounds, at risk for heart disease, diabetes, and stroke, unable to climb a flight of stairs without having to catch his breath, or travel on an airplane without buying two seats. Raised in a family that loved food, he had been aware of the problem for years, seeing doctors and trying diets from the time he was a preteen. But nothing worked, and every time he tried to make a change, it didn't go the way he planned—in fact, he wasn't sure that he really wanted to change. In *The Elephant in the Room*, Tomlinson chronicles his lifelong battle with weight in a voice that combines the urgency of Roxane Gay's *Hunger* with the intimacy of Rick Bragg's *All Over but the Shoutin'*. He also hits the road to meet other members of the plus-sized tribe in an attempt to understand how, as a nation,

we got to this point. From buying a Fitbit and setting exercise goals to contemplating the Heart Attack Grill in Las Vegas, America's "capital of food porn," and modifying his own diet, Tomlinson brings us along on a candid and sometimes brutal look at the everyday experience of being constantly aware of your size. Over the course of the book, he confronts these issues head-on and chronicles the practical steps he has to take to lose weight by the end. "What could have been a wallow in memoir self-pity is raised to art by Tomlinson's wit and prose" (Rolling Stone). Affecting and searingly honest, *The Elephant in the Room* is an "inspirational" (The New York Times) memoir that will resonate with anyone who has grappled with addiction, shame, or self-consciousness. "Add this to your reading list ASAP" (Charlotte Magazine).
