This report is part of a multi-volume technical report series entitled, Running a Food Hub, with this guide serving as a companion piece to other United States Department of Agriculture (USDA) reports by providing in-depth guidance on starting and running a food hub enterprise. In order to compile the most current information on best management and operations practices, the authors used published information on food hubs, surveyed numerous operating food hubs, and pulled from their existing experience and knowledge of working directly with food hubs across the country as an agricultural business consulting firm. The report's main focus is on the operational issues faced by food hubs, including choosing an organizational structure, choosing a location, deciding on infrastructure and equipment, logistics and transportation, human resources, and risks. As such, the guide explores the different decision points associated with the organizational steps for starting and implementing a food hub. For some sections, sidebars provide "decision points," which food hub managers will need to address to make key operational decisions. This illustrated guide may assist the operational staff at small businesses or third-party organizations that may provide aggregation, marketing, and distribution services from local and regional producers to assist with wholesale, retail, and institution demand at government institutions, colleges/universities, restaurants, grocery store chains, etc. Undergraduate students pursuing coursework for a bachelor of science degree in food science, or agricultural economics may be interested in this guide. Additionally, this reference work will be helpful to small businesses within the food trade discipline.

Destinations rely on regional strategies to support and enhance the tourism product through regional partnerships and integration. Integrated tourism is defined as tourism that is explicitly linked to the economic, social, cultural, natural and human structures of the region in which it occurs. Integrated tourism has evolved to include numerous meanings and definitions, but generally includes a vertical business or industry approach. The first of its kind, this book applies a more inclusive approach to integration by providing insight into inclusive regional development strategies that support both the needs of urban and rural areas whilst enhancing the tourist experience, supporting the positive impacts of tourism and mitigating the negative. Regional studies tend to portray either an urban or rural focus without acknowledging that often these spaces constitute joint governance structures, similar historical and cultural roots, and economic dependencies. Sustainable tourism promotes sourcing locally, such as using rural agricultural products in urban tourism experiences. Furthermore, innovative rural marketing strategies linking tourism heritage, attractions, food and drink trails, and artisans with urban visitors are emerging. Including theoretical and applied research and international case studies, this will be a valuable resource to academics, students and practitioners working in tourism development and regional policy.
