Learn Your Colors Random House Books for Young Readers

From the author of the cult favorite *Pro Cycling on \$10 a Day* and *Ask a Pro*, the story of one man's quest to realize his childhood dream, and what happened when he actually did it. Like countless other kids, Phil Gaimon grew up dreaming of being a professional athlete. But unlike countless other kids, he actually pulled it off. After years of amateur races, hard training, living out of a suitcase, and never taking "no" for an answer, he finally achieved his goal and signed a contract to race professionally on one of the best teams in the world. Now, Gaimon pulls back the curtain on the WorldTour, cycling's highest level. He takes readers along for his seasons in Europe, covering everything from rabid, water-bottle-stealing Belgian fans, to contract renewals, to riding in poisonous smog, to making friends in a sport plagued by doping. *Draft Animals* reveals a story as much about bike racing as it is about the never-ending ladder of achieving goals, failure, and finding happiness if you land somewhere in-between.

Small Animal Internal Medicine - E-Book Elsevier Health Sciences

A leader in the fields of animal ethics and neurology, Dr. Aysha Akhtar examines the rich human-animal connection and how interspecies empathy enriches our well-being. Deftly combining medicine, social history and personal experience, *Our Symphony with Animals* is the first book by a physician to show that humans and animals have a shared destiny—our well-being is deeply entwined. Dr. Akhtar reveals how empathy for animals is the next step in our species' moral evolution and a vital component of human health. When we include animals in our circle of empathy, we not only liberate animals, we also liberate ourselves. Drawing on the accounts of a varied cast of characters—a former mobster, a pediatrician, an industrial chicken farmer, a serial killer, and a deer

hunter—to reveal what happens when we both break and forge bonds with animals. Interwoven is Dr. Akhtar's own story, an immigrant who was bullied in school and abused by her uncle. Feeling abandoned by humanity, it was only when she met Sylvester, a dog who had also been abused, that she find the strength to sound the alarm for them both. Humans are neurologically designed to empathize with animals. Violence against animals goes against our nature. In equal measure, the love we give to animals biologically reverberates back to us. Our Symphony with Animals is the definitive account for why our relationships with animals matter.

The explanation of animal communication by means of concepts like information, meaning and

reference is one of the central foundational issues in animal behaviour studies. This book explores these issues, revolving around questions such as: what is the nature of information? What theoretical roles does information play in animal communication studies? Is it justified to employ these concepts in order to explain animal communication? What is the relation between animal signals and human language? The book approaches the topic from a variety of disciplinary perspectives, including ethology, animal cognition, theoretical biology and evolutionary biology, as well as philosophy of biology and mind. A comprehensive introduction familiarises non-specialists with the field and leads on to chapters ranging from philosophical and theoretical analyses to case studies involving primates, birds and insects. The resulting survey of new and established concepts and methodologies will guide future empirical and theoretical research.
