Obstetrician and gynecologist Magnus Murphy, MD, and journalist/advocate Pauline McDonagh Hull offer a compelling case for surgical delivery as a legitimate birth choice for informed women. By offering a wealth of medical evidence from around the world and thoughtfully countering the many objections detractors have lodged against it, the authors convincingly demonstrate that a planned cesarean birth at thirty-nine- plus weeks is a safe

and often preferred alternative to a planned vaginal delivery. An indispensable guide for women, their families, and medical professionals.

In the United States, over half of pregnant women receive some form of anesthesia for their deliveries; this translates into well over 2 million anesthetics per year. With this new handbook, anesthesiologists have easy access to step-by-step, to-the-point information on how to manage patients in specific situations. Every aspect of obstetric anesthesia practice is covered, including patient evaluation, anesthesia for labor and delivery, anesthesia for cesarean delivery, management of patients with concurrent medical problems, management of obstetric emergencies, fetal assessment, and neonatal resuscitation. Distilled, synthesized text is complemented by a generous number of tables, charts, figures and flow diagrams, all presented in accessible handbook format. Obstetric Anesthesia is an ideal introduction to the specialty as well as an essential daily guide for obstetric patient care and management.

WHO Guidelines for the Management of Postpartum Haemorrhage and Retained Placenta Springer Nature

This up-to-date, comprehensive and consolidated guideline on essential intrapartum care brings together new and existing WHO recommendations that, when delivered as a package, will ensure good-quality and evidence-based care irrespective of the setting or level of health care. The recommendations presented in this guideline are neither country nor region specific and acknowledge the variations that exist globally as to the level of available health services within and between countries. The guideline highlights the importance of woman-centered care to optimize the experience of labor and childbirth for women and their babies through a holistic, human rights-based approach. It introduces a global model of intrapartum care, which takes into account the complexity and diverse nature of prevailing models of care and contemporary practice. The recommendations in this guideline are intended to inform the development of relevant national- and local-level health policies and clinical protocols. Therefore, the target audience includes national and local public health policy-makers, implementers and managers of maternal and child health programs, health care facility managers, nongovernmental organizations (NGOs), professional societies involved in the planning and management of maternal and child health services, health care professionals (including nurses, midwives, general medical practitioners and obstetricians) and academic staff involved in training health care professionals.

Nursing Care Planning Made Incredibly Easy! Elsevier Health Sciences

"The six modules aim to help skilled practitioners think critically and make effective decisions on the basis of solid knowledge and understanding of these complications. When using the modules for basic midwifery programmes, it is understood that students should already be competent in most of the basic skills such as measuring blood pressure, performing a vaginal examination, conducting a normal delivery and prevention of infection. The modules were released in 1996 and have now been updated in line with recent evidence and the WHO clinical guidelines. Each module can be taught independently of the other modules. It is however advisable to work through all of them."--World Health Organization website.

Manual of Nursing Procedures and Practice Mosby

This guide provides a full range of updated, evidence-based norms and standards that will enable health care providers to give high quality care during pregnancy, delivery and in the postpartum period, considering the needs of the mother and her newborn baby. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth and during the first week of life (or later) for routine and emergency care. This guide is a guide for clinical decision-making. It facilitates the collection; analysis, classification and use of relevant information by suggesting key questions, essential observations and/or examinations, and recommending appropriate research-based interventions. It promotes the early detection of complications and the initiation of early and appropriate treatment, including time referral, if necessary. Correct use of this guide should help reduce high maternal and perinatal mortality and morbidity rates prevalent in many parts of the developing world, thereby making pregnancy and childbirth safer.

Placenta accreta comprises a spectrum of disorders where all or part of the placenta becomes attached to the muscular wall of the uterus, which can result in life-threatening hemorrhage at the time of delivery. Previous surgical procedures (including cesarean delivery) and placenta previa are important risk factors, and the incidence is dramatically increasing. This important practical guide to how clinicians should diagnose and manage placenta accreta will be an invaluable reference for all obstetricians and maternal-fetal specialists.

Global Tuberculosis Report 2018 F A Davis Company

Postpartum haemorrhage (PPH) is a major cause of mortality, morbidity and long term disability related to pregnancy and childbirth. Effective interventions to prevent and treat PPH exist and can largely reduce the burden of this life-threatening condition. Given the availability of new scientific evidence related to the prevention and treatment of PPH, this document updates previous WHO recommendations and adds new recommendations for the prevention and treatment of PPH. The primary goal of this guideline is to provide a foundation for the implementation of interventions shown to have been effective in reducing the burden of PPH. Health professionals responsible for developing national and local health policies constitute the main target audience of this document. Obstetricians, midwives, general medical practitioners, health care managers and public health policy-makers, particularly in under-resourced settings are also targeted. This document establishes general principles of PPH care and it is intended to inform the development of clinical protocols and health policies related to PPH.
