Soil, Not Oil Pluto Press

For the farmer, the seed is not merely the source of future plants and food; it is a vehicle through which culture and history can be preserved and spread to future generations. For centuries, farmers have evolved crops and produced an incredible diversity of plants that provide life-sustaining nutrition. In India alone, the ingenuity of

farmers has produced over 200,000 varieties of rice, many of which now line store shelves around the world. This productive tradition, however, is under attack as globalized, corporate regimes increasingly exploit intellectual property laws to annex these sustaining seeds and remove them from the public sphere. In *Stolen Harvest: The Hijacking of the Global Food Supply*, Shiva explores the devastating effects of commercial agriculture and genetic engineering on the food we eat, the farmers who grow it, and the soil that

sustains it. This prescient critique and call to action covers some of the most pressing topics of this ongoing dialogue, from the destruction of local food cultures and the privatization of plant life, to unsustainable industrial fish farming and safety concerns about corporately engineered foods. The preeminent agricultural activist and scientist of a generation, Shiva implores the farmers and consumers of the world to make a united stand against the genetically modified crops and untenable farming practices that endanger the seeds and plants that give us life.

Integrating Ecofeminism, Globalization, and World Religions Routledge
Demonstrates the impact of the widening wealth gap on the health and

well-being of the world's poor.
Pompeii's Living Statues Zed Books
Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy, the environment and the position of women in society coincide. In this new volume, she brings together her thinking on the protection of biodiversity, the implications of biotechnology, and the consequences for agriculture of the global pre-eminence of Western-style scientific knowledge. In lucid and accessible fashion, she examines the current threats to the planet's biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production. She shows how

the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi-tech interests making money out of the new biotechnologies. She explains what these technologies involve and gives examples of their impact in practice. She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed. Underlying her arguments is the view that the North's particular approach to scientific understanding has led to a system of monoculture in agriculture - a model that is not being foisted on the South, displacing its societies' ecologically sounder, indigenous and age-old experiences of truly sustainable food

cultivation, forest management and animal husbandry. This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of people, disrupting the social systems that provide them with security and dignity, and will ultimately result in a sterile planet in both North and South. In a policy intervention of potentially great significance, she calls instead for a halt, at international as well as local level, to the aid and market incentives to both large-scale destruction of habitats where biodiversity thrives and the introduction of centralised, homogenous systems of cultivation.

Environment and Ancient Sanskrit Literature North Atlantic Books

NATIONAL BESTSELLER • A riveting, adrenaline-fueled tour of a vast, lawless,

and rampantly criminal world that few have ever seen: the high seas. There are few remaining frontiers on our planet. But perhaps the wildest, and least understood, are the world's oceans: too big to police, and under no clear international authority, these immense regions of treacherous water play host to rampant criminality and exploitation. Traffickers and smugglers, pirates and mercenaries, wreck thieves and repo men, vigilante conservationists and elusive poachers, seabound abortion providers, clandestine oil-dumpers, shackled slaves and cast-adrift stowaways—drawing on five years of perilous and intrepid reporting, often hundreds of miles from shore, Ian Urbina introduces us to the inhabitants of this hidden world. Through their stories of

astonishing courage and brutality, survival and tragedy, he uncovers a globe-spanning network of crime and exploitation that emanates from the fishing, oil, and shipping industries, and on which the world's economies rely. Both a gripping adventure story and a stunning exposé, this unique work of reportage brings fully into view for the first time the disturbing reality of a floating world that connects us all, a place where anyone can do anything because no one is watching.

Earth Democracy North Atlantic Books
 Debunking the notion that our current food crisis must be addressed through industrial agriculture and genetic modification, author and activist Vandana Shiva argues that those forces are in fact the ones responsible for the

hunger problem in the first place. *Who Really Feeds the World?* is a powerful manifesto calling for agricultural justice and genuine sustainability, drawing upon Shiva's thirty years of research and accomplishments in the field. Instead of relying on genetic modification and large-scale monocropping to solve the world's food crisis, she proposes that we look to agroecology—the knowledge of the interconnectedness that creates food—as a truly life-giving alternative to the industrial paradigm. Shiva succinctly and eloquently lays out the networks of people and processes that feed the world, exploring issues of diversity, the needs of small farmers, the importance of seed saving, the movement toward localization, and the role of women in producing the world's food.

Naming the Enemy Catapult

'One of the world's most prominent radical scientists.' The Guardian This book is classic of the environmental movement. In it, Vandana Shiva envisions a world beyond our current dependence on fossil fuels and globalization, and makes the compelling case that food crises, oil dependency and climate change are all inherently interlinked. Any attempt to solve one without addressing the others is therefore doomed to failure. Condemning industrial agriculture and biofuels as recipes for ecological and economic disaster, Shiva instead champions small independent farmers. What is needed most, in a time of hunger and changing climates, are sustainable, biologically diverse farms

that are better able to resist disease, drought and flooding. Calling for a return to local economies and small-scale agriculture, Shiva argues that humanity's choice is a stark one: we can either continue to pursue a market-centred approach, which will ultimately make our planet unliveable, or we can instead strive for a people-centred, oil-free future, one which offers a decent living for all. This edition features a new introduction by the author, in which she outlines recent developments in ecology and environmentalism, and offers new prescriptions for the environmental movement.

The Outlaw Ocean Deep and Deep Publications

Genetic engineering and the cloning of organisms are “the ultimate expression

of the commercialization of science and the commodification of nature.... Life itself is being colonized,” according to renowned environmentalist Vandana Shiva. The resistance to this biopiracy, she argues, is the struggle to conserve both cultural and biological diversity. As the land, forests, oceans, and atmosphere have already been colonized, eroded, and polluted, corporations are now looking for new colonies to exploit and invade for further accumulation—in Shiva’s view, the interior spaces of the bodies of women, plants, and animals. Featuring a new introduction by the author, this edition of *Biopiracy* is a learned, clear, and passionately stated objection to the ways in which Western businesses are being allowed to expropriate natural

processes and traditional forms of knowledge.

American Wasteland University Press of Kentucky

At the National Air and Space Museum in Washington, D.C. and at selected museum theaters around this country, a movie entitled 'Blue Planet' is currently being shown. Spliced together from film footage taken by astronauts in orbit around planet Earth, this movie entrances viewers with the loveliness of our planet, a small blue and white marble revolving through the black void of space.

Stolen Harvest Chelsea Green Publishing
With a new epilogue about Bill Gates's global agenda and how we can resist the billionaires' war on life "This is what globalization looks like: Opportunism.

Exploitation. Further centralization of power. Further disempowerment of ordinary people. . . . Vandana Shiva is an expert whose analysis has helped us understand this situation much more deeply."—Russell Brand Widespread poverty, social unrest, and economic polarization have become our lived reality as the top 1% of the world's seven-billion-plus population pushes the planet—and all its people—to the social and ecological brink. In Oneness vs. the 1%, Vandana Shiva takes on the billionaire dictators of Gates, Buffet, and Mark Zuckerberg, as well as other modern empires like Big Tech, Big Pharma, and Big Ag, whose blindness to the rights of people, and to the destructive impact of their construct of linear progress, have wrought havoc

across the world. Their single-minded pursuit of profit has undemocratically enforced uniformity and monocultures, division and separation, monopolies and external control—over finance, food, energy, information, healthcare, and even relationships. Basing her analysis on explosive facts, Shiva exposes the 1%'s model of philanthrocapitalism, which is about deploying unaccountable money to bypass democratic structures, derail diversity, and impose totalitarian ideas based on One Science, One Agriculture, and One History. Instead, Shiva calls for the resurgence of: Real knowledge Real intelligence Real wealth Real work Real well-being With these core goals, people can reclaim their right to: Live Free. Think Free. Breathe Free. Eat Free.

Whole Earth Discipline New Society Publishers

Vandana Shiva charts the impact of globalised, corporate agriculture on small farmers, the environment, and the quality of the food we eat. She includes chapters on genetically engineered seeds, and the debate on shrimp farming.

My Foreign Cities Sourcebooks, Inc.

NEW YORK TIMES EDITORS' CHOICE • A powerful, poetic memoir about what it means to exist as an Indigenous woman in America, told in snapshots of the author's encounters with gun violence. Finalist for the Dayton Literary Peace Prize • Goop Book Club Pick • "Essential . . . We need more voices like Toni Jensen's, more books like Carry."—Tommy Orange, New York

Times bestselling author of *There There* Toni Jensen grew up around guns: As a girl, she learned to shoot birds in rural Iowa with her father, a card-carrying member of the NRA. As an adult, she's had guns waved in her face near Standing Rock, and felt their silent threat on the concealed-carry campus where she teaches. And she has always known that in this she is not alone. As a Métis woman, she is no stranger to the violence enacted on the bodies of Indigenous women, on Indigenous land, and the ways it is hidden, ignored, forgotten. In *Carry*, Jensen maps her personal experience onto the historical, exploring how history is lived in the body and redefining the language we use to speak about violence in America. In the title chapter, Jensen connects the

trauma of school shootings with her own experiences of racism and sexual assault on college campuses. "The Worry Line" explores the gun and gang violence in her neighborhood the year her daughter was born. "At the Workshop" focuses on her graduate school years, during which a workshop classmate repeatedly killed off thinly veiled versions of her in his stories. In "Women in the Fracklands," Jensen takes the reader inside Standing Rock during the Dakota Access Pipeline protests and bears witness to the peril faced by women in regions overcome by the fracking boom. In prose at once forensic and deeply emotional, Toni Jensen shows herself to be a brave new voice and a fearless witness to her own difficult history—as well as to the violent cultural landscape in which she finds her

coordinates. With each chapter, Carry reminds us that surviving in one's country is not the same as surviving one's country.

Water Wars Vintage Crime/Black Lizard

"Her great virtue as an advocate is that she is not a reductionist. Her awareness of the complex connections among economy and nature and culture preserves her from oversimplification. So does her understanding of the importance of diversity."—Wendell Berry, from the foreword Motivated by agricultural devastation in her home country of India, Vandana Shiva became one of the world's most influential and highly acclaimed environmental and antiglobalization activists. Her groundbreaking research has exposed the destructive effects of monocultures

and commercial agriculture and revealed the links between ecology, gender, and poverty. In *The Vandana Shiva Reader*, Shiva assembles her most influential writings, combining trenchant critiques of the corporate monopolization of agriculture with a powerful defense of biodiversity and food democracy. Containing up-to-date data and a foreword by Wendell Berry, this essential collection demonstrates the full range of Shiva's research and activism, from her condemnation of commercial seed technology, genetically modified organisms (GMOs), and the international agriculture industry's dependence on fossil fuels, to her tireless documentation of the extensive human costs of ecological deterioration. This important volume illuminates Shiva's profound

understanding of both the perils and potential of our interconnected world and calls on citizens of all nations to renew their commitment to love and care for soil, seeds, and people.

Global Policing iUniverse

World-renowned environmental activist and physicist Vandana Shiva calls for a radical shift in the values that govern democracies, condemning the role that unrestricted capitalism has played in the destruction of environments and livelihoods. She explores the issues she helped bring to international attention—genetic food engineering, culture theft, and natural resource privatization—uncovering their links to the rising tide of fundamentalism, violence against women, and planetary death. Struggles on the streets of Seattle

and Cancun and in homes and farms across the world have yielded a set of principles based on inclusion, nonviolence, reclaiming the commons, and freely sharing the earth's resources. These ideals, which Dr. Shiva calls "Earth Democracy," serve as an urgent call to peace and as the basis for a just and sustainable future.

[ReadHowYouWant.com](#)

This quietly revolutionary guidebook picks up where the bestselling Process Self-Reliance Series' *The Urban Homestead* left off and brings us into the kitchen, where the daily choices we make involving food have a profound impact both on our lives and the world at large. Deborah Eden Tull draws upon

years of experience as a monk, organic farmer, and chef to introduce simple but life-changing ways for urbanites to adopt a more mindful relationship with food, from shopping, menu planning, cooking, growing, and storing food, maintaining the kitchen, and eating out, to community food sharing and tips for parents. Beautifully illustrated, practical, and fun, this book is filled with anecdotes and step-by-step instructions to inspire neophytes and experienced homesteaders alike. The Natural Kitchen's introspective and educational journey will inspire action and change forever the way readers relate to food, the environment, and their daily lives. Red Harvest Algonquin Young Readers "Smith spins out a sensuous, sinuous psychological thriller that compels

attention to the final line."—Booklist Amelie and Janet are in love with the same man: Janet's husband. One knows it; the other doesn't. Or does she? As bestselling novelist Amelie Ferrar knows, an affair with a married person is like a work of fiction: a kind of spy story with its rules and customs, negotiations and compromises, and many private rituals. But like any spy story, there will inevitably be a betrayal: something will slip, someone else will find out, someone may even die. As Amelie falls deeper into her obsession with the man she loves—and his wife—the line between the fiction she writes and the reality she lives begins to blur...and the twisted ending to this story is one that not even she could have seen coming.

Hubris and Hybrids Da Capo Lifelong

Books

"The world's most prominent radical scientist." The Guardian Vandana Shiva, a world-renowned environmentalist and campaigner, examines the e~water warse(tm) of the twenty-first century: the aggressive privatization by the multinationals of communal water rights. While drought and desertification are intensifying around the world, corporations are aggressively converting free-flowing water into bottled profits. The water wars of the twenty-first century may match -- or even surpass -- the oil wars of the twentieth. In *Water Wars: Privatization, Pollution and Profit*, acclaimed author Vandana Shiva sheds light on the activists who are fighting corporate manoeuvres to convert this life-sustaining resource into more gold

for the elites. In *Water Wars*, Shiva uses her remarkable knowledge of science and society to outline the emergence of corporate culture and the historical erosion of communal water rights. Using the international water trade and industrial activities such as damming, mining, and aquafarming as her lens, Shiva exposes the destruction of the earth and the disenfranchisement of the world's poor as they are stripped of rights to a precious common good. Shiva calls for a movement to preserve water access for all, and offers a blueprint for global resistance based on examples of successful campaigns.

Citizen Coke: The Making of Coca-Cola Capitalism Rowman & Littlefield Building on the success of its second edition, the third edition of the

Sustainable Urban Development Reader provides a generous selection of classic and contemporary readings giving a broad introduction to this topic. It begins by tracing the roots of the sustainable development concept in the nineteenth and twentieth centuries, before presenting readings on a number of dimensions of the sustainability concept. Topics covered include land use and urban design, transportation, ecological planning and restoration, energy and materials use, economic development, social and environmental justice, and green architecture and building. All sections have a concise editorial introduction that places the selection in context and suggests further reading. Additional sections cover tools for sustainable development, international

sustainable development, visions of sustainable community and case studies from around the world. The book also includes educational exercises for individuals, university classes, or community groups, and an extensive list of recommended readings. The anthology remains unique in presenting a broad array of classic and contemporary readings in this field, each with a concise introduction placing it within the context of this evolving discourse. The Sustainable Urban Development Reader presents an authoritative overview of the field using original sources in a highly readable format for university classes in urban studies, environmental studies, the social sciences, and related fields. It also makes a wide range of sustainable urban

planning-related material available to the public in a clear and accessible way, forming an indispensable resource for anyone interested in the future of urban environments.

Stolen Harvest Princeton University Press

The Green Revolution has been heralded as a political and technological achievement—unprecedented in human history. Yet in the decades that have followed it, this supposedly nonviolent revolution has left lands ravaged by violence and ecological scarcity. A dedicated empiricist, Vandana Shiva takes a magnifying glass to the effects of the Green Revolution in India, examining the devastating effects of monoculture and commercial agriculture and revealing the nuanced relationship

between ecological destruction and poverty. In this classic work, the influential activist and scholar also looks to the future as she examines new developments in gene technology.

Eating Fossil Fuels South End Press

In the transitional networked society, police power is no longer constrained by the borders of the nation state. It has globalised. *Global Policing* shows how security threats have been constructed by powerful actors to justify the creation of a new global policing architecture and how the subculture of policing shapes the world system. Demonstrating how a theory of global policing is central to understanding global governance, the text explores: - the 'new security agenda' focused on serious organised crime and terrorism and how this is

transforming policing - the creation of global organisations such as Interpol, regional entities such as Europol, and national policing agencies with a transnational reach - the subculture of the 'global cops', blurring boundaries between police, private security, military and secret intelligence agencies - the reality of transnational policing on the ground, its effectiveness, legitimacy,

accountability and future development. Written by two leading international experts who bring cutting-edge theoretical debates to life with case studies and examples, Global Policing will prove captivating reading for students and scholars in criminology, criminal justice, international relations, law and sociology.
