Thermodynamics sets fundamental laws for all physical processes and is central to driving and maintaining planetary dynamics. But how do Earth system processes perform work, where do they derive energy from, and what are the limits? This accessible book describes how the laws of thermodynamics apply to Earth system processes, from solar radiation to motion, geochemical cycling and biotic activity. It presents a novel view of the thermodynamic Earth system explaining how it functions and evolves, how different forms of disequilibrium are being maintained, and how evolutionary trends can be interpreted as

thermodynamic trends. It also offers an original perspective on human activity, formulating this in terms of a thermodynamic, Earth system process. This book uses simple conceptual models and basic mathematical treatments to illustrate the application of thermodynamics to Earth system processes, making it ideal for researchers and graduate students across a range of Earth and environmental science disciplines.

Over recent decades, the responsibility for the past actions of the European colonial powers in relation to their former colonies has been subject to a lively debate. In this book, the question of the responsibility under international law of former colonial States is addressed. Such a legal responsibility would presuppose the violation of the international law that was applicable at the time of colonization. In the 'Scramble for Africa' during the Age of New Imperialism (1870-1914), European States and non-State actors mainly used cession and protectorate treaties to acquire territorial sovereignty (imperium) and property rights over land (dominium). The question is raised whether Europeans did or did not on a systematic scale breach these treaties in the context of the acquisition of territory and the expansion of empire, mainly through extending sovereignty rights and, subsequently, intervening in the internal affairs of African political entities.

The contributions gathered in this volume exhibit a great variety of interdisciplinary perspectives on and theoretical approaches to the notion of 'spaces between'. They draw our attention to the nexus between the medium of comics and the categories of difference as well as identity such as gender, dis/ability, age, and ethnicity, in order to open and intensify an interdisciplinary conversation between comics studies and intersectional identity studies.

In the midst of spiraling ecological devastation, multispecies feminist theorist Donna J. Haraway offers provocative new ways to reconfigure our relations to the earth and all its inhabitants. She eschews referring to our current epoch as the Anthropocene, preferring to conceptualize it as what she calls the Chthulucene, as it more aptly and fully describes our epoch as one in which the human and nonhuman are inextricably linked in tentacular practices. The Chthulucene, Haraway explains, requires sym-*poiesis*, or making-with, rather than auto-*poiesis*, or self-making. Learning to stay with the trouble of living and dying together on a damaged earth will prove more conducive to the kind of thinking that would provide the means to building more livable futures. Theoretically and methodologically driven by the signifier SF—string figures, science fact, science fiction, speculative feminism, speculative fabulation, so far—Staying with the Trouble further cements Haraway's reputation as one of the most daring and original thinkers of our time.

Chances are, you already

know how to draw some expressions. But face it, your stories can only get so far with "happy," "sad" and "angry." In order to give your characters some character, you need to know what they look like when they're about to sneeze, when they smell something stinky or when they're flirting, horrified or completely blotto. Lucky for you, that's what this book is all about! Making Faces contains everything you need to give your characters a wide range of expressions! Part 1: The Basics. How to draw heads, mouths, noses and eyes, and how they change shape when they move. Part 2: The Faces. Over 50 step-by-step demonstrations for a variety of expressions divided into scenarios. Each scenario shows four or five expressions from a single character, from simple emotions to more subtle and complex variations, so you see how a face changes with each emotion. Sidebars illustrate the same expressions on a variety of other characters. Part 3: Storytelling. How to move your story along using expression, point of view, body language and composition. See how it all comes together with damsels in distress, a

noir-style interrogation, a Western standoff and other situations.

Illustrated with a diverse cast of characters from hobos to superheroes to teenage girls, this guide will help you create the looks that say it all.
