Surrounded on all borders but its western

coastline by hostile and aggressive neighbors, the state of Israel resembles the walled city of the Middle Ages. But its walls are not stone and mortar, they are flesh and blood—they are the soldiers, both men and women—the airmen, the intelligence, the tankscorpomen and the paratroops. These young people—from the old ghettos of Europe, from the cities of North Africa and Asia, native-born Sabras—are the protecting wall that keeps Israel free. *The Walls of Israel* is Jean Lartéguy's fascinating 1968 study of the Israeli armed forces. Talking with them, living with them, joining in their operations (he was taken along on a nighttime ambush set up to catch Syrian infiltrators), Lartéguy got to know the Israeli soldier as few could. From this book, wide ranging and filled with lively anecdotes, emerges a picture of an army, tough and determined, yet intelligent and realistic enough to foresee a long and dangerous road ahead before a peace is won.

This collection of essays is devoted to algae that are unexpectedly found in harsh habitats. The authors explain how these algae thrive in various temperature ranges, extreme pH values, salt solutions, UV radiation, dryness, heavy metals, anaerobic niches, various levels of illumination, and hydrostatic pressure. Not only do the essays provide clues about life on the edges of the Earth, but possibly elsewhere in the universe as well.

As the first duo of singer and pianist to be perceived as equals in the music world, French baritone Pierre Bernac and pianist composer Francis Poulenc became a legend, working together for more than 25 years. The majority of Poulenc's pieces were created specifically for Bernac to sing. Within this context, Bernac pays tribute to his friend by providing a detailed discussion of all the songs he composed specifically for piano accompaniment. Each song, its description, and the corresponding biographical note on the poet have been translated into English. *Thermophilic Microorganisms* Oxford University Press, USA

People are using the future to search for better ways to achieve sustainability, inclusiveness, prosperity, well-being and peace. In addition, the way the future is understood and used is changing in almost all domains, from social science to daily

life. This book presents the results of significant research undertaken by UNESCO with a number of partners to detect and define the theory and practice of anticipation around the world today. It uses the concept of 'Futures Literacy' as a tool to define the understanding of anticipatory systems and processes – also known as the Discipline of Anticipation. This innovative title explores: • new topics such as Futures Literacy and the Discipline of Anticipation; • the evidence collected from over 30 Futures Literacy Laboratories and presented in 14 full case studies; • the need and opportunity for significant innovation in human decision-making systems. This book will be of great interest to scholars, researchers, policy-makers and students, as well as activists working on sustainability issues and innovation, future studies and anticipation studies.

English manuscript painting achieved great mastery during the period from 1280 to 1400 with the development of an intrinsically native style, exemplified by the East Anglian school, that flourished throughout London and the provinces during the 14th century. Although ecclesiastical and private devotional needs largely determined the style and type of book, courtly and aristocratic patronage provided French, Belgian, and Italian influences that are also evident in the manuscripts of this period. This catalogue and study of 158 Gothic manuscripts--some of them famous, and all outstanding masterpieces--demonstrates these links and developments in the illuminated style.

'To Whom This May Come' (1889) is a classic short story by the American author, Edward Bellamy, most famous for his socialist and utopian novel 'Looking Backward: 2000-1887' (1888). First published in 'Harper's New Monthly Magazine', it tells the tale of an unnamed narrator who is the sole survivor of a shipwreck. Washed ashore on a remote island, he is horrified to discover that its inhabitants have the ability to read minds, but to his surprise, this unique ability has consequences he never expected. This adventurous tale will excite those who are already familiar with Bellamy's other short stories, as well as new readers who are looking for an interesting read. Edward

Bellamy (1850 - 1898) was an American author, journalist and political activist. His novel 'Looking Backward: 2000-1887' (1888) was one of the most successful books published in the United States in the 19th century and influenced a generation of intellectuals. Referenced in many Marxist publications of the time, the book inspired the formation of Nationalist Clubs dedicated to spreading his political ideas. Bellamy's other works include the novels 'Six to One' (1878), 'Dr. Heidenhoff's Process' (1880), 'Miss Ludington's Sister' (1885), 'Equality' (1897) and 'The Duke of Stockbridge; a Romance of Shays' Rebellion (1900)', as well as several short stories, such as 'The Blindman's World', 'To Whom This May Come', and 'With the Eyes Shut'.

Faced with widespread and devastating loss of biodiversity in wild habitats, scientists have developed innovative strategies for studying and protecting targeted plant and animal species in "off-site" facilities such as botanic gardens and zoos. Such ex situ work is an increasingly important component of conservation and restoration efforts. *Ex Situ Plant Conservation*, edited by Edward O. Guerrant Jr., Kayri Havens, and Mike Maunder, is the first book to address integrated plant conservation strategies and to examine the scientific, technical, and strategic bases of the ex situ approach. The book examines where and how ex situ investment can best support in situ conservation. *Ex Situ Plant Conservation* outlines the role, value, and limits of ex situ conservation as well as updating best management practices for the field, and is an invaluable resource for plant conservation practitioners at botanic gardens, zoos, and other conservation organizations; students and faculty in conservation biology and related fields; managers of protected areas and other public and private lands; and policymakers and members of the international community concerned with species conservation.

[Toward a Metaphysics of Culture](#) Sinauer Associates, Incorporated

*Toward a Metaphysics of Culture* provides an initial, minimal, and original analysis of the concept of uniquely enlanguaged cultures of the human world and of the distinctive metaphysical features of whatever belongs to the things of that world: preeminently, persons, language, actions, artworks, products, history, practices, institutions, and norms. Emphasis is placed on the artifactual and

hybrid nature of persons, naturalistic and post-Darwinian evolutionary considerations, and the bearing of the account on a range of disputed inquiries largely centered on the relationship between physical nature and human culture and between the natural and human sciences. The schema offered lays a foundation for a closer analysis of the human mind, cognition, interpretation, nomologicality, normativity, intentionality, realism, and related matters. The central thesis advances the heterodox notion, congruent with post-Darwinian studies in paleoanthropology, that the human person is a natural artifact, a functional transform of the primate members of *Homo sapiens*, by way of a complexly intertwined biological and encultured evolution, primarily dependent on the invention, transmission, and mastery of true language and the novel hybrid abilities that that makes possible. The emergence of persons is taken to be the obverse side of the mastery of language itself.

This book covers the key features of nitric oxide (NO) in plants. Comprising nine chapters, Part I highlights its metabolism and identification in plants. Part II, which consists of eight chapters, focuses on the chemical, physical and biochemical properties of the NO molecule and its derivatives; on its functional role and mode of action; and on its signaling and interaction with phytohormones, mineral nutrients, biomolecules, ions and ion channels in plants under abiotic stresses. Combining the expertise of leading researchers in the field, the book provides a concise overview of plant NO biology and offers a valuable reference work.
