This autobiography chronicles the life and career of Haralampos M. Moutsopoulos, an internationally renowned professor of medicine and prolific researcher on Sjögren's syndrome and autoimmune rheumatic diseases. In language that is simple and direct, he takes us on a fascinating journey from the days of his first scientific awakenings at a hospital in his native town of Ioannina, Greece, through his university years in Athens and training in the U.S., to his eventual return to his homeland. In Greece, he developed two centers of excellence in his field, first at the newly founded University of Ioannina Medical School Department of Internal Medicine and, second, at the Athens University Medical School, Department of Pathophysiology, where he taught until his retirement in 2011. Along the way, he introduces us to his teachers and mentors, and to the colleagues and students he mentored in turn, many of whom went on to assume high-ranking positions in Greece and abroad. A major theme throughout the book is his impassioned struggle for excellence, meritocracy, and transparency in universities and in the National Health System in Greece. Peppered with both amusing and unsettling incidents from this lifelong crusade to raise professional standards and against misconduct, the book is a must-read for anyone interested in learning about or entering the medical profession.

Drawing upon reports and documents from the Department of Internal Medicine, papers of past university presidents, interviews, and the contemporary literature of medical history and education, author Lee Anderson focuses on two interesting questions. First, how did the University of Iowa's medical researchers, far from the centers of money and power, come to be recognized the world over? Second, how can the history of a single department of medicine, written against a backdrop of national events, illustrate the specific development of modern medical specialties and subspecialties? This absorbing history traces one department in the medical college of the University of Iowa from its beginnings to 1990. Although the treatment is primarily institutional, Anderson pays ample attention to numerous personalities and their role in shaping the development of the program. While avoiding the "great doctor" approach, he threads key people through complex issues, illuminating the tension between technology and the human elements in medical practice. The medical program itself is the center of the work, and Anderson skillfully indicates the subject matter without going into the substance of the numerous topics that constitute internal medicine. In other words, he has written a history for the general reader, not simply for the medical specialist.

Internal Medicine in World War II.: Infectious diseases and general medicine Springer Publishing Company

This book provides teaching scripts for medical educators in internal medicine and coaches them in creating their own teaching scripts. Every year, thousands of attending internists are asked to train the next generation of physicians to master a growing body of knowledge. Formal teaching time has become increasingly limited due to rising clinical workload, medical documentation requirements, duty hour restrictions, and other time pressures. In addition, today's physicians-in-training expect teaching sessions that deliver focused, evidence-based content that is integrated into clinical workflow. In keeping with both time pressures and trainee expectations, academic internists must be prepared to effectively and efficiently teach important diagnostic and management concepts. A teaching script is a methodical and structured plan that aids in effective teaching. The teaching scripts in this book anticipate learners' misconceptions, highlight a limited number of teaching points, provide evidence to support the teaching points, use strategies to engage the learners, and provide a cognitive scaffold for teaching the topic that the teacher can refine over time. All divisions of internal medicine (e.g. cardiology, rheumatology, and gastroenterology) are covered and a section on undifferentiated symptom-based presentations (e.g. fatigue, fever, and unintentional weight loss) is included. This book provides well-constructed teaching scripts for commonly encountered clinical scenarios, is authored by experienced academic internists and allows the reader to either implement them directly or modify them for their own use. Each teaching script is designed to be taught in 10-15 minutes, but can be easily adjusted by the reader for longer or shorter talks. *Teaching Scripts in Internal Medicine* is an ideal tool for internal medicine attending physicians and trainees, as well as physician's assistants, nurse practitioners, and all others who teach and learn internal medicine.
