Nutrition has been identified as one of the most neglected, but important aspects of gastroenterology. Clinical Nutrition in Gastrointestinal Disease covers all of the vital aspects of nutrition and serves as the definitive resource on this topic. Dr. Alan Buchman has teamed up with more than 70 world renowned leaders in the field to provide today's professional specializing in gastrointestinal disease with a practical guide that examines and explains the necessary elements and principles of nutrition. With more than 100 images and 180 tables, this unique and comprehensive text provides essential information to optimally and successfully manage patients. Clinical Nutrition in Gastrointestinal Disease delivers the latest information in a comprehensive and well-organized format that is perfect for gastroenterologists, general surgeons, and general internists looking to increase their knowledge of clinical nutrition. Some Topics Covered Include: Nutritional assessment Nutrition in critical care Nutritional support Management of intestinal failure Obesity Some Gastrointestinal Diseases Covered Include: Inflammatory bowel disease Irritable bowel syndrome Colon cancer Pancreatitis Hepatic failure Celiac sprue *Anaesthesia, Pain, Intensive Care and Emergency Medicine - A.P.I.C.E.* Walter de Gruyter

Day-to-day activities are important in the development of social identities, the establishment of social standing, and the communal understanding of societal rules. This perspective is broadly referred to as practice theory and relates to the power of an overarching social structure and the individual actors that exist within it. Practice theory has made an important contribution to anthropological and archaeological research as these fields are particularly interested in daily life and the importance of these actions. This volume argues that practice theory can also be used in a bioarchaeological context through the examination of human skeletal remains and the archaeological context in which they were excavated. Bioarchaeology offers a unique perspective on these day-to-day experiences—skeletal tissue is constantly undergoing a process of change and, as a living biological system, it can adapt to external forces. Furthermore, bioarchaeological studies are multi-scalar and can examine individuals, groups, or entire populations. Using osteological indicators of activity patterns (entheseal changes, osteoarthritis) and dietary isotopes (carbon, nitrogen) as examples, this book addresses patterns of everyday life in the ancient past. Physical activities and food consumption are actions that are carried out on a daily basis.

While bioarchaeology does not have the ability to recreate specific day-to-day activities, we can assess broad trends in everyday life. The volume illustrates these points using examples from the Ancient Nile Valley. Through the examination of over 800 Egyptian and Nubian individuals from five different archaeological sites, the research addresses patterns of everyday life as they relate to social inequality, agency, and practice. Beyond osteological indicators of activity and dietary patterns, this book also discusses additional methods that can be pursued to draw attention to daily life. Lastly, this book also highlights the applicability of and potential contribution that practice theory can make to this area of research.

While highlighting the prevailing role of television in Western societies, Art vs. TV maps and condenses a comprehensive history of the relationships of art and television. With a particular focus on the link between reality and representation, Francesco Spampinato analyzes video art works, installations, performances, interventions and television programs made by contemporary artists as forms of resistance to and appropriation and parody of mainstream television. The artists discussed belong to different generations: those that emerged in the 1960s in association with art movements such as Pop Art, Fluxus and Happening; and those appearing on the scene in the 1980s, whose work aimed at deconstructing media representation in line with postmodernist theories; to those arriving in the 2000s, an era in which, through reality shows and the Internet, anybody could potentially become a media personality; and finally those active in the 2010s, whose work reflects on how old media like television has definitively vaporized through the electronic highways of cyberspace. These works and phenomena elicit a tension between art and television, exposing an incongruence; an impossibility not only to converge but at the very least to open up a dialogical exchange.

This book is a collection of papers delivered at an international conference in September 1996 at the Scottish National Gallery of Modern Art during a major Giacometti retrospective. The contributors are leading curators, art historians and literature specialists. While the relationship between nineteenth- and twentieth-century painters and writers has been the subject of intense interest in recent years, the parallel relationship between sculptors and writers has been largely neglected. These essays seek to redress the balance by looking at a variety of ways in which the conventional barriers between writing and sculpting were broken down by such pioneering figures as Rodin, Degas, Bourdelle, Valéry, Apollinaire, Reverdy, Breton, Bataille, Arp,

Picasso and Giacometti. Among the topics discussed are: the many personal and professional contacts, dual artistic talent, 'Ecrits d'artistes', ekphrasis, sculpture as object, the sculptorly representation of the poet, the poetic representation of the sculptor, sculpture as metaphor, proprioception and mental images. Fully illustrated throughout, this book offers new perspectives on familiar masterpieces like Rodin's Gates of Hell, but also opens up less well known subjects like Valéry's sculpture and Breton's Object-Poems. Above all it makes a provocative and original contribution to Word and Image studies.

Interpretation of Micromorphological Features of Soils and Regoliths, Second Edition, provides researchers and students with a tool for interpreting features observed in soil thin sections and through submicroscopic studies. After an introduction and general overview, micromorphological aspects of regoliths (e.g., saprolites, transported materials) are highlighted, followed by a systematic and coherent discussion of the micromorphological expression of various pedogenic processes. The book is written by an international team of experts in the field, using a uniform set of concepts and terminology, making it a valuable interdisciplinary reference work. The following topics are treated: freeze-thaw features, redoximorphic features, calcareous and gypsiferous formations, textural features, spodic and oxic horizons, volcanic materials, organic matter, surface horizons, laterites, surface crusts, salt minerals, biogenic and pedogenic siliceous materials, other authigenic silicates, phosphates, sulphidic and sulphuric materials, and features related to faunal activity. The last chapters address anthropogenic features, archaeological materials and palaeosoils. Updates the first exhaustive publication on interpretation of micromorphological features, with some new chapters and with a larger number of additional references Covers related topics, making micromorphology more attractive and accessible for geomorphologists, archaeologists and quaternary geologists Includes thematic treatment of a range of soil micromorphology fields and broadens its applications Features input from a multi-disciplinary team, ensuring thorough coverage of topics related to soil science, archaeology and geomorphology **Cahiers - Centre d'etudes de recherche operationnelle** Elsevier

Chemoinformatics and Bioinformatics in the Pharmaceutical Sciences brings together two very important fields in pharmaceutical sciences that have been mostly seen as diverging from each other: chemoinformatics and bioinformatics. As developing drugs is an expensive and lengthy process, technology can improve the cost, efficiency and speed at which new drugs can be discovered and tested. This book presents some of the growing advancements of technology in the field of drug development and how the computational approaches explained here can reduce the financial and experimental burden of the drug discovery process. This book will be useful to pharmaceutical science researchers and students who need basic knowledge of computational techniques relevant to their projects. Bioscientists, bioinformaticians, computational scientists, and other stakeholders from industry and academia will also find this book helpful. Provides practical information on how to choose and use appropriate computational tools Presents the wide, intersecting fields of chemo-bio-informatics in an easily-accessible format Explores the fundamentals of the emerging field of chemoinformatics and bioinformatics

Ce guide de l'enseignant a pour objectif de présenter aux enfants de 10 à 13 ans les différents aspects et rôles des forêts, tout en permettant aux professeurs de suivre les objectifs du programme scolaire en matière de science, géographie et citoyenneté, entre autres. Les modules de l'enseignant définissent les forêts, décrivent leur rôle dans le cycle de l'eau, explorent certains de leurs produits et introduisent la gestion durable des forêts aux étudiants. S'inspirant de la méthode internationalement reconnue de la démarche d'investigation, ces livrets promeuvent «l'apprentissage par la pratique», en classe ou sous les arbres, même si des exercices de lecture et d'écriture sont également inclus. Ce guide est accompagné d'un guide de l'élève richement illustré.

Ces premiers Cahiers de la Qualité de l'Université de Technologie de Compiègne (UTC) offrent au lecteur un accès rapide et opérationnel aux travaux réalisés sur de nouveaux concepts, méthodes et outils associés aux démarches qualité dans les organisations. Les thèmes abordés sont étroitement associés à toute démarche d'amélioration de la performance : Respecter un référentiel qualité. Développer une culture d'auto-évaluation. Maîtriser les risques. Conduire une démarche aussi "naturelle" que possible. Les idées et outils qualité présentés dans ces Cahiers visent à développer les aptitudes à l'autonomie des organisations de service, source potentielle de l'intelligence compétitive qui associée à l'innovation continue dans les pratiques professionnelles peut conduire simultanément à la performance économique et au développement respectueux de l'Humain. Chaque chapitre est accompagné de bonus téléchargeables gratuitement sur la page du livre du site des éditions Lexitis : MOTS CLES : Management de la qualité, Métrologie, Qualité en Recherche, Audit interne, Qualité en Santé, Auto + évaluation, Cadre d'auto-évaluation des Fonctions publiques, Lean Management.

Patellofemoral complaints are a major problem for all those working in sports medicine and orthopaedics. The correct diagnosis at an early stage is essential if subsequent treatment is to be successful and secondary complications are to be avoided. Written by an internationally known team of experts this book looks at the various diagnostic techniques currently available,

cites examples of unsuccessful treatments and proposes the most appropriate ones on the proven basis of the latest research. The core of the book is the 20 case studies ranging from simple non-operative treatment to multi-operated patients with salvage procedures. The underlying theme of the book is that treatment of patellofemoral problems must, in the first instance, be somewhat conservative. Surgical interventions should be performed in a response to a clear underlying pathology and only after non-operative treatment has failed. Patellofemoral Disorders is enhanced by the inclusion of some superb specially drawn illustrations and numerous colour photographs in the case studies section.

This volume examines the impact of and responses to historic earthquakes and volcanic eruptions in the Azores. Study is placed in the contexts of: the history and geography of this fascinating archipelago; progress being made in predicting future events and policies of disaster risk reduction. This is the only volume to consider the earthquake and volcanic histories of the Azores across the whole archipelago and is based, not only on contemporary published research, but also on the detailed study of archival source materials. The authors seek to show how extreme environmental events, as expressed through eruptions, earthquakes and related processes operating in the past may be considered using both complementary scientific and social scientific perspectives in order to reveal the ways in which Azorean society has been shaped by both an isolated location in the middle of the Atlantic Ocean and the ever present threat of environmental uncertainty. Chapter 2, which analyses in depth the geology and tectonics of the islands is of more specialist interest, but technical terms are fully explained so as to widen the accessibility of this material. The audience for this volume includes all those who are interested in the geology, geography, history and hazard responses in the Azores. It is written, not just for the educated general reader, but for the specialist earth scientist and hazard researcher.

Carlota S. Smith was a key figure in linguistic research and a pioneering woman in generative linguistics. This selection of papers focuses on the research into tense, aspect, and discourse that Smith completed while Professor of Linguistics at the University of Texas at Austin. Smith's early work in English syntax is still cited today, and her early career also yielded key research on language acquisition by young children. Starting in the mid-1970s, after her move to UT, she embarked on her most important line of research. In numerous papers - the first of which was published in 1975 - and in a very important 1991 book (*The Parameter of Aspect*), Smith analyzed how languages encode time and how they encode the ways events and situations occur over time. Smith's work on the expression of time in language is notable because of its careful analyses of a number of quite different languages, including not only English and French, but also Russian, Mandarin, and Navajo. Inspired by a year in France in the early 1970s, Smith began to analyze the differing ways in which languages encode time and how they encode the ways events and situations occur over time. In doing so, she developed her signature 'two-component' theory of aspect. This model of temporal aspect provided an excellent framework for graduate students seeking to analyze the temporal systems of an array of languages, including under-described languages that are so much the focus of research in UT's Linguistics Department. Selected by Carlota Smith herself and by her longtime friends and colleagues, this book contains her 1980 piece on temporal structures in discourse, her 1986 comparison of the English and French aspectual systems, a 1996 paper on the aspect system in Navajo (an increasingly-endangered language which Smith worked to preserve), and her 1980 and 1993 papers on the child's acquisition of tense and aspect. Smith, who died in 2007, was a trailblazer in her field whose broad interests fed into her scholarly research. She was an avid reader who sought to bring the analytic tools of linguistics to the humanistic study of literature, by examining the syntactic and pragmatic principles which underlie literary effects. Her research on rhetorical and temporal effects in context was integrated into her last book, *Modes of Discourse* (2003). The current volume of articles covers much of her most fruitful work on the way in which language is used to express time, and will be essential reading for many working and studying in linguistics generally and in semantics particularly.

This book throws light on the relevance and role played by translations and translators at times of serious discontinuity throughout history. Topics explored by scholars from different continents and disciplines include war, the disintegration of transnational polities, health disasters and revolutions - be they political, social, cultural and/or technological. Surprisingly little is known, for example, about the role that translated constitutions had in instigating and in shaping political crises at both a local and global level, and how these events had an effect on translations themselves. Similarly, the role that translations played as instruments for either building or undermining empires, and the extent to which interpreters could ease or hamper negotiations and foster new national identities has not been adequately acknowledged. This book addresses all these issues, among others, through twelve studies focused not just on texts but also on instances of verbal and non-verbal communications in a range of languages from around the world. This interdisciplinary work will engage scholars working in fields such as Translation Studies, History, Modern Languages, English, Law, Politics and Social Studies.

The theme of this meeting was the management of technologies in the context of developing countries, and in the light of recent developments concerning especially open source software and applications. Speakers from various countries debated in English and in French over the importance of changing the rules concerning library management systems, as well as related implications. Results show that open source software might be a solution, although some conditions apply. Réunion sous le thème de la gestion des systèmes automatisés de bibliothèques dans les pays en développement, conférenciers et participants discutèrent des changements récents dans ce domaine, notamment de l'apport des logiciels à code source ouvert. Les conférenciers, provenant de différents pays, présentèrent en anglais et en français leurs différents points de vue et expériences sur cette question importante pour l'avenir, de même que sur les implications qui y sont liées. Les résultats démontrent que les logiciels à code source ouverts peuvent être une solution, mais à certaines conditions.

Toxicological Survey of African Medicinal Plants provides a detailed overview of toxicological studies relating to traditionally used medicinal plants in Africa, with special emphasis on the methodologies and tools used for data collection and interpretation. The book considers the physical parameters of these plants and their effect upon various areas of the body and human health, including chapters dedicated to genotoxicity, hepatotoxicity, nephrotoxicity, cardiotoxicity, neurotoxicity, and specific organs and systems. Following this discussion of the effects of medicinal plants is a critical review of the guidelines and methods in use for toxicological research as well as the state of toxicology studies in Africa. With up-to-date research provided by a team of experts, Toxicological Survey of African Medicinal Plants is an invaluable resource for researchers and students involved in pharmacology, toxicology, phytochemistry, medicine, pharmacognosy, and pharmaceutical biology. Offers a critical review of the methods used in toxicological survey of medicinal plants Provides up-to-date toxicological data on African medicinal plants and families Serves as a resource tool for students and scientists in the various areas of toxicology

This new volume in the Oasis Papers series marks the 40th anniversary of archaeological fieldwork in the Dakhleh Oasis in Egypt's Western Desert under the leadership of Anthony J. Mills and presents a synthesis of the current state of our knowledge of the oasis and its interconnections with surrounding regions, especially the Nile Valley. The papers are by distinguished authorities in the field and postgraduate students who specialise in different aspects of Dakhleh and presents an almost complete survey of the archaeology of Dakhleh including much unpublished, original material. It will be one of the few to document a specific part of modern Egypt in such detail and thus should have a broad and lasting appeal. The content of some of the papers is unlikely to be published in any other form elsewhere. Dakhleh is possibly the most intensively examined wider geographic region within Egypt.
