The field of physical anthropology deals with issues that everyone thinks about and cares about: our origins, our evolutionary history, and why we look and act the way we do. The field has

benefited greatly by increased attention from the media, from popular books, and from several television series. There is a multitude of topics considered by physical anthropologists, including human and primate origins, primate societies, growth and development, genetics, forensic science, and nutrition. Most physical anthropology graduate students have traditionally aspired to research and/or teaching careers at a university. However, during the last decade there has been an

increased interest in non-traditional careers outside the ivory tower, primarily because the number of new physical anthropology Ph.D.s exceeds the number of jobs available in anthropology departments. Because physical anthropology encompasses a variety of research interests, students are broadly trained and have a wealth of talents and skills that make them competitive for non-academic careers. However, pursuing opportunities outside the

academy requires thoughtful planning and training. This collection serves as a reference for students contemplating a career in physical anthropology within or outside the academy. Several rewarding career paths that physical anthropologists have chosen are described. Students will understand how anthropological theory, methods, and training are applicable to job responsibilities and career development. This book will also help departments of

anthropology design coursework and training programs that will make their students more competitive. In sum, the future of anthropology seems promising given the discipline's broad scope and concern for issues faced by contemporary society, and physical anthropologists will be playing an increased role in many arenas.

Southwest, 3rd Edition R. R. Bowker
 Discusses the history and culture of Maine, describes the sights and attractions in each region of the state, and provides travel information.
New Mexico Compass America Guides
 During the 1930s in the United States, the Works Progress Administration developed the Federal Writers' Project to support writers and artists while making a national effort to document the country's shared history and culture. The American

Guide series consists of individual guides to each of the states. Little-known authors—many of whom would later become celebrated literary figures—were commissioned to write these important books. John Steinbeck, Saul Bellow, Zora Neale Hurston, and Ralph Ellison are among the more than 6,000 writers, editors, historians, and researchers who documented this celebration of local histories. Photographs, drawings, driving tours,

detailed descriptions of towns, and rich cultural details exhibit each state's unique flavor. At the time of the publication of the WPA Guide to Arizona in 1940, the Grand Canyon State was the newest addition to the union. The guide presents a state of contrasts, both geographically and culturally. The photographs show many facets of the state—from the mesas and desert lands to the Spanish missions and Native American art.

A climate defined by wet and dry seasons, a mostly mountainous terrain, a biota prone to disturbances, a human geography characterized by a diversity of peoples all of whom rely on burning in one form or another: Mexico has ideal circumstances for fire, and those fires provide a unique perspective on its complex history. Narrating Mexico's evolution of fire through

five eras, historian Stephen J. Pyne describes the pre-human, pre-Hispanic, colonial, industrializing (1880–1980), and contemporary (1980–2015) fire biography of this diverse and dynamic country. Creatively deploying the Aztec New Fire Ceremony and the “five suns” that it birthed, Pyne addresses the question, “Why does fire appear in Mexico the way it does?” *Five Suns* tells the saga through a pyric prism. Mexico has become one of the top ten

“firepowers” in the world today through its fire suppression capabilities, fire research, and industrial combustion, but also by those continuing

customary practices that have become increasingly significant to a world that suffers too much combustion and too little fire. Five Suns completes

a North American fire-history trilogy written by Pyne over the past 40 years, complementing his histories of Canada and the United States.
