Another Work Is Possible Fox Chapel Publishing
 How would you go about rebuilding a technological society from scratch? If our technological society collapsed tomorrow what would be the one book you would want to press into the hands of the postapocalyptic survivors? What crucial knowledge would they need to survive in the immediate aftermath and to rebuild civilization as quickly as possible? Human knowledge is collective, distributed across the population. It has built on itself for centuries, becoming vast and increasingly specialized. Most of us are ignorant about the fundamental principles of the civilization that supports us, happily utilizing the latest—or even the most basic—technology without having the slightest idea of why it works or how it came to be. If you had to go back to absolute basics, like some sort of postcataclysmic Robinson Crusoe, would you know how to re-create an internal combustion engine, put together a microscope, get metals out of rock, or even how to produce food for yourself? Lewis Dartnell proposes that the key to preserving civilization in an apocalyptic scenario is to provide a quickstart guide, adapted to cataclysmic circumstances. *The Knowledge* describes many of the modern technologies we employ, but first it explains the fundamentals upon which they are built. Every piece of technology rests on an enormous support network of other technologies, all interlinked and mutually dependent. You can't hope to build a radio, for example, without understanding how to acquire the raw materials it requires, as well as generate the electricity needed to run it. But Dartnell doesn't just provide specific information for starting over; he also reveals the greatest invention of them all—the phenomenal knowledge-generating machine that is the scientific method itself. *The Knowledge* is a brilliantly original guide to the fundamentals of science and how it built our modern world.

New Edge of the Anvil Intermediate Technology Publications
 "This book will teach you to hand build a knife using the traditional method of blacksmiths of old-forging. Traditional forging of a knife blade is a process which uses the ancient techniques of moving hot steel with hammer and anvil alone into a knife-form that is ready for filing, heat treating and sharpening with no or very minimal electric grinding. Almost anyone with basic hand tool aptitude can learn to make a knife by forging. Forging skills are not outside the average person's facility or capacity. If this is a new encounter for you it will necessitate your swinging a hammer; not at a nail but at a piece of hot steel, learning and applying some ten or twelve blacksmithing techniques and secrets, and experiencing some trial and error. I have probably taught hundreds of men, women and a few children to do this and I am confident you can learn to do this too. As a wise man said: "Life is trial and error, mostly error". I make errors every time I go to my anvil. So will you. This book also teaches traditional fit-and-finish skills with hand tools alone. It explains an ancient riveted full-tang handle construction system that surpasses modern methods. This book is designed for both first-time, back-yard beginner smiths to experienced knifemakers and any general blacksmiths in between wanting to build a knife using these ancient ways"--

A contemporary envisioning of a nineteenth-century poem pairs artwork by G. Brian Karas with the Henry Wadsworth Longfellow classic. His brow is wet with honest sweat; He earns whate'er he can, And looks the whole world in the face, For he owes not any man. The neighborhood blacksmith is a quiet and unassuming presence, tucked in his smithy under the chestnut tree. Sturdy, generous, and with sadness of his own, he toils through the day, passing on the tools of his trade, and come evening, takes a well-deserved rest. Longfellow's timeless poem is enhanced by G. Brian Karas's thoughtful and contemporary art in this modern retelling of the tender tale of a humble craftsman. An afterword about the tools and the trade of blacksmithing will draw readers curious about this age-honored endeavor, which has seen renewed interest in developed countries and continues to be plied around the world.
