HIV infection involves all systems of our body and diseases manifest in atypical and severe forms leading to lot of morbidity and mortality. Skin being the largest organ of the body and with mucous membranes, it is the main portal of HIV infection. There is a lot of scope for research in the field of HIV and AIDS, and there

is a need for an updated literature that would throw a light on the efficient diagnosis and management of cutaneous manifestations in HIV disease. Hence we are bringing out this eBook which is a comprehensive literature on HIV and its various cutaneous manifestations in its entirety. In this eBook we have provided extensive data and information on various skin related infections, papulosquamous disorders, disorders of vasculature, pruritic papular eruptions, neoplasias, adverse drug reactions and other hair, nail, oral and ocular associated disorders in HIV. The work has been sufficiently researched and contributed by experts in this field. Clinical photographs and extensive scientific literature will enhance the knowledge and confidence of the readers particularly clinicians and postgraduates to efficiently diagnose and manage cutaneous diseases in HIV infected patients. We acknowledge the work and sincere efforts of all the contributors who have made this project to happen. Sincere thanks to Dr. Eswari L and Dr. Shwetha S for their support and help in bringing out this edition. Thanks to my spouse and daughters for their encouragement and support and especially to the publishers without whom this work would go unnoticed. We hope that this conscious effort will benefit the readers and in turn the people living with HIV- AIDS at large.

This updated volume provides a "user-friendly" reference for dermatologists, dermatology residents and students, as well as for health care workers in related fields to better understand immune-mediated skin diseases and their therapies. The focus is on what is needed by the physician/resident or student for better understanding the pathophysiology of the disease as well as the mechanisms of action of the therapies. The reader can easily read about groups of related diseases as well as groups of related therapies. The level of complexity of the book is such that it has practical applications on a daily basis but can also be used by the resident as a teaching tool and as a handy source of review for the boards. In addition, it can be used by the practicing dermatologist to study for recertification. The scope of the book is immunology, immunogenetics, immunopathology and immunopharmacology as they relate to clinical dermatology. *Fitzpatrick's Color Atlas and Synopsis of Clinical Dermatology, Seventh Edition* Elsevier Health Sciences

This book provides a reference guide in the field of dermatology, presenting and discussing its interface with public health. Dermatological diseases are extremely common in populations around the globe, and the systematization of knowledge about these dermatoses and their relationships with different epidemiological factors may help us to understand the challenges that governments and private institutions face and must try to overcome in order to improve global health. Undergraduate and graduate students, dermatologists and general practitioners who study and / or work in the area will find scientific support in this book, which is intended as a reference work for dermatological practice and public health. The book has ten sections addressing carefully selected topics, including: 1. concepts in dermatoepidemiology and the international strategies in programs of Public Health; 2-6. the most significant skin diseases (including dermatology in tropical medicine) ; 7. diseases that are not primarily dermatological, but have a high impact on public health and may have skin and mucosal manifestations; 8. a number of emerging issues in dermatology in public health; 9. clinical approaches (diagnosis and management) to common dermatological symptoms and 10. multidisciplinary approaches in dermatology. The editors have brought together authors with extensive experience in their respective fields in order to provide a reference book for those involved in or with an interest in the relationship between dermatology and public health.

The vast majority of the global population has pigmented non-Caucasian skin; accordingly, this book focuses on the diagnosis and management of skin diseases in dark-skinned populations, paying particular attention to different reactive profiles, the frequency and the clinical pictures of diseases in pigmented ethnic skin that arise in hot climate zones. Supplemented by a wealth of high-quality, full-color images, this comprehensive work covers the full range of dermatological entities and issues characteristic of the tropical and subtropical regions of the globe, including those that are now emerging in developed countries as a result of intensified travel, globalized business, and migration. Each disorder is described by respected experts on subtropical and tropical countries, and each chapter is clearly structured, examining the incidence, pathogenesis, clinical presentation, management and course. The book illustrates the clinical features and includes major schedules for the diagnosis and management of skin diseases presented in darkly pigmented to black skin. As such, it offers an invaluable tool for all dermatologists in developing and developed countries, especially those who are

used to dealing with skin lesions mainly in white Caucasian skin. While enabling physicians to provide proper advice, medical services and support, *Pigmented Ethnic Skin and Imported Dermatoses* also represents a guide for a broader range of professionals working for governmental institutions, health and refugee agencies.
