Becoming a Successful Teacher of Maths

is a practical guide for newly qualified teachers of secondary mathematics. It develops the essential core knowledge, skills and understanding demanded by the new DfEE requirements for courses of initial teacher training. It is based on research findings relating to the organisation and management of maths classrooms, teaching approaches, assessment and the common misconceptions which often hinder pupils' progress in key areas of the National Curriculum. Theoretical principles are exemplified through case-study material. Suggestions for school-based activities are made. While being a practical 'how to' guide for beginning teachers, it also offers critical insights for more experienced teachers reflecting on their practice.

Whatever specification you teach, GCSE Mathematics: Revision and Practice by David Rayner remains an all-round winner. With the latest edition presented in full colour and completely updated for the new GCSE specifications from 2015, this uniquely effective series continues to increase your students' chance of success with your chosen exam board. This book is targeted at the Higher tier GCSE, and provides a wealth of practice with careful progression, alongside substantial revision support for the new-style grading and exam questions. With all the new topics included, and a dedicated section on using and applying mathematics, this unique resource can be used either as a course book over two

or three years or as a revision text in the run-up to exams. GCSE Mathematics: Revision and Practice provides invaluable support for your GCSE maths programme.

In this controversial new book, Daisy
Christodoulou offers a thought-provoking
critique of educational orthodoxy.

Drawing on her recent experience of
teaching in challenging schools, she
shows through a wide range of examples
and case studies just how much
classroom practice contradicts basic
scientific principles. She examines seven
widely-held beliefs which are holding
back pupils and teachers: Facts prevent
understanding Teacher-led instruction is
passive The 21st century fundamentally
changes everything You can always just
look it up We should teach transferable
skills Projects and activities are the best
way to learn Teaching knowledge is

indoctrination In each accessible and engaging chapter, Christodoulou sets out the theory of each myth, considers its practical implications and shows the worrying prevalence of such practice. Then, she explains exactly why it is a myth, with reference to the principles of modern cognitive science. She builds a powerful case explaining how governments and educational organisations around the world have let down teachers and pupils by promoting and even mandating evidence-less theory and bad practice. This blisteringly incisive and urgent text is essential reading for all teachers, teacher training students, policy makers, head teachers, researchers and academics around the world.
