FORD LEE

Animals as Experiencing Entities

Springer Nature
A NEW YORK TIMES
NOTABLE BOOK OF 2020
"In this superbly articulate
cri de coeur, Safina gives
us a new way of looking at

the natural world that is
radically different."—The
Washington Post New
York Times bestselling
author Carl Safina brings
readers close to three
non-human
cultures—what they do,
why they do it, and how
life is for them. A New
York Times Notable Books
of 2020 Some believe that
culture is strictly a human

phenomenon. But this
book reveals cultures of
other-than-human beings
in some of Earth's
remaining wild places. It
shows how if you're a
sperm whale, a scarlet
macaw, or a chimpanzee,
you too come to
understand yourself as an
individual within a
particular community that
does things in specific

ways, that has traditions. Alongside genes, culture is a second form of inheritance, passed through generations as pools of learned knowledge. As situations change, social learning—culture—allows behaviors to adjust much faster than genes can adapt. *Becoming Wild* brings readers into intimate proximity with various nonhuman individuals in their free-living communities. It presents a revelatory account of how animals function beyond our usual

view. Safina shows that for non-humans and humans alike, culture comprises the answers to the question, “How do we live here?” It unites individuals within a group identity. But cultural groups often seek to avoid, or even be hostile toward, other factions. By showing that this is true across species, Safina illuminates why human cultural tensions remain maddeningly intractable despite the arbitrariness of many of our differences. *Becoming Wild* takes readers behind

the curtain of life on Earth, to witness from a new vantage point the most world-saving of perceptions: how we are all connected. *Supernavigators* Penguin Now in paperback and with an update about pets during COVID. In the last 20 years pets have gone from the backyard to sleeping on our beds, then showing up in every corner of America. *Pet Nation* tells the story of this seismic shift and the economic, media, legal, political, and social dramas springing from

this cultural transformation. Since 1998 the pet population in the U.S. has almost doubled -- about two-thirds of the country now owns a pet. No longer left to wander the neighborhood, dogs and cats eat special food, get individualized medical attention, and even fly in the cabin. As founder of the Animal Policy Group, Mark Cushing provides an inside look at the rise of Pet Nation, tracking the myriad ways pets are acquired (a "Canine Freedom Train" runs

south to north), reporting on pet rights legislation (and the unseen problems that come with elevating their status), pet healthcare (revealing the truth and myths about large scale breeders), and discovering that despite what many organizations would have us believe, there is a shortage of dogs. Insightful, surprising, and full of great stories, *Pet Nation* opens our eyes to the big changes happening in front of us right now. It shows us not only what our love of animals says

about pets, it shows us what it says about ourselves.

The Emotional Lives of Animals (revised) Harper Collins

Animal Behavior, Third Edition covers animal behavior from its neurological underpinnings to the importance of behavior in conservation. The book's authors, Michael Breed and Janice Moore, bring almost 60 years of combined experience as university professors, much of that teaching animal behavior. Chapters

cover this social behavior and the relationship between parasites, pathogens and behavior. Thoughtful coverage has also been given to foraging behavior, mating and parenting behavior, anti-predator behavior, and learning. The book addresses the physiological foundations of behavior in a way that is both accessible and inviting, with each chapter beginning with learning objectives and ending with thought-provoking questions. Additionally, special terms

and definitions are highlighted throughout, making this book an essential work for students and academic seeking a foundation in the field. - Provides a rich resource on animal science and behavior for students and professors from a wide range of life science disciplines - Features updated and revised chapters, with new case studies and high-definition illustrations - Highlights new focuses on animal welfare issues and companion animal

behavior
Handbook of Historical Animal Studies Harvard University Press
 How do animals perceive the world? What does it really feel like to be a cat or a dog? In Understanding Animals, Lars Svendsen investigates how humans can attempt to understand the lives of other animals. The book delves into animal communication, intelligence, self-awareness, loneliness, and grief, but most fundamentally how

humans and animals can cohabit and build a form of friendship. Svendsen provides examples from many different animal species—from chimpanzees to octopus—but his main focus is on cats and dogs: the animals that many of us are closest to in our daily lives. Drawing upon both philosophical analysis and the latest scientific discoveries, Svendsen argues that the knowledge we glean from our relationships with our pets is as valid and insightful as any scientific

study of human-animal relations. With this entertaining and thought-provoking book, animal lovers and pet owners will gain a deeper understanding of what it is like to be an animal—and in turn, a human.

Mama's Last Hug: Animal Emotions and What They Tell Us about Ourselves

Harvest House Publishers
This book describes the similarities and differences between two species, bonobos and chimpanzees, based on the three decades the

author has spent studying them in the wild, and shows how the contrasting nature of these two species is also reflected in human nature. The most important differences between bonobos and chimpanzees, our closest relatives, are the social mechanisms of coexistence in group life. Chimpanzees are known as a fairly despotic species in which the males exclusively dominate over the females, and maintain a rigid hierarchy.

Chimpanzees have developed social intelligence to survive severe competition among males: by upholding the hierarchy of dominance, they can usually preserve peaceful relations among group members. In contrast, female bonobos have the same or even a higher social status than males. By evolving pseudo-estrus during their non-reproductive period, females have succeeded in moderating inter-male sexual competition, and in initiating mate selection.

Although they are non-related in male-philopatric society, they usually aggregate in a group, enjoy priority access to food, determine which male is the alpha male, and generally maintain much more peaceful social relations compared to chimpanzees. Lastly, by identifying key mechanisms of social coexistence in these two species, the author also seeks to find solutions or “hope” for the peaceful coexistence of human beings. "Takeshi Furuichi is one of very few

scientists in the world familiar with both chimpanzees and bonobos. In lively prose, reflecting personal experience with apes in the rain forest, he compares our two closest relatives and explains the striking differences between the male-dominated and territorial chimpanzees and the female-centered gentle bonobos." Frans de Waal, author of *Mama's Last Hug - Animal Emotions and What They Tell Us about Ourselves* (Norton, 2019)

Every Creature Has a Story Scribner

Moral behavior does not begin and end with religion but is in fact a product of evolution.

Animal Behavior Carcanet Press

In this thought-provoking book, the acclaimed author of *Our Inner Ape* examines how empathy comes naturally to a great variety of animals, including humans. Are we our brothers' keepers? Do we have an instinct for compassion? Or are we, as is often assumed, only on earth to serve our own

survival and interests? By studying social behaviors in animals, such as bonding, the herd instinct, the forming of trusting alliances, expressions of consolation, and conflict resolution, Frans de Waal demonstrates that animals—and humans—are "preprogrammed to reach out." He has found that chimpanzees care for mates that are wounded by leopards, elephants offer "reassuring rumbles" to youngsters in distress, and dolphins support sick companions near the water's surface to prevent

them from drowning. From day one humans have innate sensitivities to faces, bodies, and voices; we've been designed to feel for one another. De Waal's theory runs counter to the assumption that humans are inherently selfish, which can be seen in the fields of politics, law, and finance. But he cites the public's outrage at the U.S. government's lack of empathy in the wake of Hurricane Katrina as a significant shift in perspective—one that helped Barack Obama

become elected and ushered in what perhaps could become an Age of Empathy. Through a better understanding of empathy's survival value in evolution, de Waal suggests, we can work together toward a more just society based on a more generous and accurate view of human nature. Written in layman's prose with a wealth of anecdotes, wry humor, and incisive intelligence, *The Age of Empathy* is essential reading for our embattled times. "An important and

timely message about the biological roots of human kindness."—Desmond Morris, author of *The Naked Ape*
Do I Make Myself Clear?
 Walter de Gruyter GmbH & Co KG
 "A book that offers hope."
 —The New York Times Book Review
 "A wondrous tapestry." —Carl Safina, author of *Beyond Words: What Animals Think and Feel*
 Audubon Medal winner Richard Louv's landmark book *Last Child in the Woods* inspired an international movement to connect children and

nature. Now he redefines the future of human-animal coexistence. In *Our Wild Calling*, Louv interviews researchers, theologians, wildlife experts, indigenous healers, psychologists, and others to show how people are connecting with animals in ancient and new ways, and how this serves as an antidote to the growing epidemic of human loneliness; how dogs can teach children ethical behavior; how animal-assisted therapy may yet transform the mental health field; and

what role the human-animal relationship plays in our spiritual health. He reports on wildlife relocation and on how the growing populations of wild species in urban areas are blurring the lines between domestic and wild animals. Our Wild Calling makes the case for protecting, promoting, and creating a sustainable and shared habitat for all creatures—not out of fear, but out of love. Includes a new interview with the author, discussion questions, and a resource

guide.

End of the Megafauna: The Fate of the World's Hugest, Fiercest, and Strangest Animals

Macmillan

Animals do a wide range of work in our society, but they are rarely recognized as workers or accorded any labour rights, and their working conditions are often oppressive and exploitative. Drawing on law, ethics, and labour studies, the essays in this volume explore the potential and dangers of animal labour.

Hailed conservationist Carl Safina examines animal personhood as told through the inspired narrative portraits of elephants, wolves, and dolphins

Understanding Animals
Penguin

"This book will delight both animal lovers and military buffs!" —

Elizabeth Letts, bestselling author of *The Eighty Dollar Champion* Millions rallied to the cause of freedom against Nazism and the menace of Imperial Japan. But did

you know that some of those heroes had fur, or feathers? War animals guarded American coasts against submarine attack, dug out Londoners trapped in bomb wreckage, and carried vital messages under heavy fire on Pacific islands. They kept up morale, rushed machine gun nests, and even sacrificed themselves picking up live grenades. Now Robin Hutton, the bestselling author of *Sgt. Reckless: America's War Horse*, tells the heart-warming stories of the

dogs, horses, mules, pigeons—and even one cat—who did their bit for the war effort. American and British families volunteered beloved family pets and farm dogs to aid in the war effort; Americans, including President Roosevelt, bought honorary commissions in the reserves for lapdogs and other pets not suitable for military duties to “exempt” them from war service and raise money to defeat Hitler and Tojo. Many of these gallant animals are recipients of

the prestigious PDSA Dickin Medal, the “Animals’ Victoria Cross.” In *War Animals: The Unsung Heroes of World War II* you’ll meet: -Judy, the POW dog who helped her beloved human survive brutal Japanese prison camps -Cher Ami, the pigeon who nearly died delivering a message that saved American troops from death by friendly fire -Beauty, the “digging dog” who sniffed out Londoners buried in the wreckage of the Blitz—along with pets, including one goldfish still

in its bowl! -Olga, the horse who braved shattering glass to do her duty in London bombings -Smoky, the Yorkshire terrier who did parachute jumps, laid communications wire through a pipe so small only she could navigate it, became the first therapy dog—and starred on a weekly TV show after the War -Simon, the war cat whose campaign against the “Mao Tse Tung” of the rat world saved food supplies and his ship’s crew -Chips, who guarded Roosevelt and Churchill

during the Casablanca Conference, and the only dog to earn a Silver Star for his heroics The shining loyalty and courage of these heroes is a testimony to the enduring bond between us and the animals we love. *Good Natured* Bloomsbury Publishing We are surrounded by an astounding variety of lifeforms. Over millennia, they have evolved to exploit unique niches, in the process developing features and skills that set them apart. Have you ever wondered what price the

giraffe pays for its long neck? The neck increases its blood pressure to pump blood up to its brain, which endangers its life every time it bends down to drink. Or have you thought about how female nightingales decide which male will share the burdens of parenthood with them? They listen to prospective candidates' songs to gauge if they'd make good fathers. And did you know that glassfrogs pee on their eggs and the gender of bearded dragons is fixed by sex

chromosomes or temperature? In *Every Creature Has a Story*, Janaki Lenin draws us towards the wonders of the natural world in evocative and witty words. She uncovers the surprising, sometimes bizarre but always amazing ways in which creatures breed and survive, from spiders salivating during sex and snails entombing their parasites into their shells to elephants developing immunity to cancer. After reading this book, you'll never look at nature in

the same way again. **Heartland** Harvard University Press
Primatologist Frans de Waal explores human and primate culture in order to arrive at a better understanding of the roots of human behaviour. He examines whether animals learn from one another and have what he defines as culture. *Chimpanzee Politics* Rutgers University Press
A seminal exploration of animal emotion, sentience, and cognition, revised and expanded to incorporate a surge of

new science. When award-winning scientist Marc Bekoff penned the first edition of this book in 2007, he predicted that over time our understanding of animal cognition and emotion would grow "richer, more accurate, and possibly different." Since then, not only has the field seen an explosion of new and startling research, but the popular interest in the subject has grown as well, spawning countless podcasts, articles, and bestselling books. Bekoff skillfully blends

extraordinary stories of animal joy, empathy, grief, embarrassment, anger, and love with the latest scientific research confirming the existence of emotions that common sense and experience have long implied. Filled with light humor and compassion, *The Emotional Lives of Animals* is a clarion call for reassessing both how we view and how we treat animals.

Our Symphony with

Animals Seven Dials

The phenomenon of friendship is universal.

Friends, after all, are the family we choose. But what makes these bonds not just pleasant but essential, and how do they affect our bodies and our minds? In *Friendship*, science journalist Lydia Denworth takes us in search of the biological, psychological, and evolutionary foundations of this important bond. She finds that the human capacity for friendship is as old as humanity itself, when tribes of people on the African savanna grew large enough for individuals to seek

meaningful connection with those outside their immediate families. Lydia meets scientists at the frontiers of brain and genetics research, and discovers that friendship is reflected in our brain waves, our genomes, and our cardiovascular and immune systems; its opposite, loneliness, can kill. With insight and warmth, Lydia weaves past and present, biology and neuroscience, to show how our bodies and minds are designed for friendship, and how this is changing in the age of

social media. Blending compelling science, storytelling, and a grand evolutionary perspective, she delineates the essential role that cooperation and companionship play in creating human (and non-human) societies. Friendship illuminates the vital aspects of friendship, both visible and invisible, and offers a refreshingly optimistic vision of human nature. It is a clarion call for putting positive relationships at the centre of our lives.

Into the Headwinds

Little, Brown
 'Essential reading for anybody who cares about the future' Henry Marsh,
 New Statesman Books of the Year A radical examination of Britain's relationship with the land by one of our greatest nature writers.
 SHORTLISTED FOR THE WAINWRIGHT GOLDEN BEER BOOK PRIZE 2019
 The British love their countryside more than almost any other nation, yet they live in one of the most denatured landscapes on Earth.
 From the flatlands of

Norfolk to the tundra-like expanse of the Flow Country in northern Scotland, Mark Cocker sets out on a personal quest through the British countryside attempting to solve this puzzle. Radical, provocative and original, Our Place tackles some of the central issues of our time whilst mapping out a future in which this overcrowded island of ours could be a place fit not just for human occupants but also for its billions of wild citizens. 'A tour de force... By turns hopeful, melancholy,

humorous and heartfelt' BBC Wildlife Book of the Month

The Age of Empathy

National Geographic Books

A New York Times bestseller: "A passionate and convincing case for the sophistication of nonhuman minds."
—Alison Gopnik, The Atlantic Hailed as a classic, Are We Smart Enough to Know How Smart Animals Are? explores the oddities and complexities of animal cognition—in crows, dolphins, parrots, sheep,

wasps, bats, chimpanzees, and bonobos—to reveal how smart animals really are, and how we've underestimated their abilities for too long. Did you know that octopuses use coconut shells as tools, that elephants classify humans by gender and language, and that there is a young male chimpanzee at Kyoto University whose flash memory puts that of humans to shame? Fascinating, entertaining, and deeply informed, de Waal's landmark work will

convince you to rethink everything you thought you knew about animal—and human—intelligence.
M Is for Mama Wm. B. Eerdmans Publishing Longlisted for the PEN/E.O. Wilson Literary Science Writing Award "Every new book by Frans de Waal is a cause for excitement, and this one is no different. A breath of fresh air in the cramped debate about the differences between men and women. Fascinating, nuanced, and very timely." —Rutger

Bregman, author of *Humankind: A Hopeful History*. In *Different*, world-renowned primatologist Frans de Waal draws on decades of observation and studies of both human and animal behavior to argue that despite the linkage between gender and biological sex, biology does not automatically support the traditional gender roles in human societies. While humans and other primates do share some behavioral differences, biology offers no justification for existing

gender inequalities. Using chimpanzees and bonobos to illustrate this point—two ape relatives that are genetically equally close to humans—de Waal challenges widely held beliefs about masculinity and femininity, and common assumptions about authority, leadership, cooperation, competition, filial bonds, and sexual behavior. Chimpanzees are male-dominated and violent, while bonobos are female-dominated and peaceful. In both species, political

power needs to be distinguished from physical dominance. Power is not limited to the males, and both sexes show true leadership capacities. *Different* is a fresh and thought-provoking approach to the long-running debate about the balance between nature and nurture, and where sex and gender roles fit in. De Waal peppers his discussion with details from his own life—a Dutch childhood in a family of six boys, his marriage to a French woman with a

different orientation toward gender, and decades of academic turf wars over outdated scientific theories that have proven hard to dislodge from public discourse. He discusses sexual orientation, gender identity, and the limitations of the gender binary, exceptions to which are also found in other primates. With humor, clarity, and compassion, Different seeks to broaden the conversation about human gender dynamics by promoting an inclusive

model that embraces differences, rather than negating them.

The Social Lives of Animals

Henry Holt and Company

Mama of ten Abbie Halberstadt helps women humbly and gracefully rise to the high calling of motherhood without settling for mediocrity or losing their minds in the process. Motherhood is a challenge. Unfortunately, our worldly culture offers moms little in the way of real help. Mamas only connect to celebrate surviving another day and

to share in their misery rather than rejoice in what God has done and to build each other up in hard times. There has a be a better way, a biblical way, for mamas to grow and thrive. As a daughter of Christ, you have been called to be more than an average mama. Attaining excellence doesn't have to be unsettling but it will take committed focus and a desire to parent well according to God's grace and for His glory. M is for Mama offers advice, encouragement, and scripturally sound

strategies seasoned with a little bit of humor to help you embrace the challenge of biblical motherhood and raise your children with love and wisdom. Mama, you are worthy of the awesome responsibility God has given you. Now it's time to start believing you can live up to it. Becoming Wild New World Library
'Gavin's book is extraordinary: his easy prose and gasp-making encounters make for a gripping and very funny read. It's a rollercoaster

ride with a complete professional. I loved it.' JOANNA LUMLEY '[Gavin is] a great cameraman with infinite patience, but also a writer with great powers of observation and expression. Brilliant!' ALAN TITCHMARSH ***
From Gavin Thurston, the award-winning Blue Planet II and Planet Earth II cameraman with a foreword by Sir David Attenborough comes extraordinary and adventurous true stories of what it takes to track down and film our planet's most captivating

creatures. Gavin has been a wildlife photographer for over thirty years. Against a backdrop of modern world history, he's lurked in the shadows of some of the world's remotest places in order to capture footage of the animal kingdom's finest: prides of lions, silverback gorillas, capuchin monkeys, brown bears, grey whales, penguins, mosquitoes - you name it he's filmed it. From journeys to the deepest depths of the Antarctic Ocean and the wide expanse of the Saharan deserts, to the

peaks of the Himalayas and the wild forests of the Congo, Gavin's experiences describe much more than just the incredible array of animals he's filmed. He

invites you to come inside the cameraman's hidden world and discover the hours spent patiently waiting for the protagonists to appear;

the inevitable dangers in the wings and the challenges faced and overcome; and the heart-warming, life-affirming moments the cameras miss as well as capture.
